Gigabit Broadband Router

USER'S GUIDE

Vigor2135 Series Gigabit Broadband Router

User's Guide

Version: 1.2

Firmware Version: V4.3.2.1

(For future update, please visit DrayTek web site)

Date: November 29, 2021

Copyrights

© All rights reserved. This publication contains information that is protected by copyright. No part may be reproduced, transmitted, transcribed, stored in a retrieval system, or translated into any language without written permission from the copyright holders.

Trademarks

The following trademarks are used in this document:

- Microsoft is a registered trademark of Microsoft Corp.
- Windows 8, 10 and Explorer are trademarks of Microsoft Corp.
- Apple and Mac OS are registered trademarks of Apple Inc.
- Other products may be trademarks or registered trademarks of their respective manufacturers.

Safety Instructions

- Read the installation guide thoroughly before you set up the router.
- The router is a complicated electronic unit that may be repaired only be authorized and qualified personnel. Do not try to open or repair the router yourself.
- Do not place the router in a damp or humid place, e.g. a bathroom.
- The router should be used in a sheltered area, within a temperature range of +5 to +40 Celsius.
- Do not expose the router to direct sunlight or other heat sources. The housing and electronic components
 may be damaged by direct sunlight or heat sources.
- Do not deploy the cable for LAN connection outdoor to prevent electronic shock hazards.
- Keep the package out of reach of children.
- When you want to dispose of the router, please follow local regulations on conservation of the environment.

Warranty

• We warrant to the original end user (purchaser) that the router will be free from any defects in workmanship or materials for a period of two (2) years from the date of purchase from the dealer. Please keep your purchase receipt in a safe place as it serves as proof of date of purchase. During the warranty period, and upon proof of purchase, should the product have indications of failure due to faulty workmanship and/or materials, we will, at our discretion, repair or replace the defective products or components, without charge for either parts or labor, to whatever extent we deem necessary tore-store the product to proper operating condition. Any replacement will consist of a new or re-manufactured functionally equivalent product of equal value, and will be offered solely at our discretion. This warranty will not apply if the product is modified, misused, tampered with, damaged by an act of God, or subjected to abnormal working conditions. The warranty does not cover the bundled or licensed software of other vendors. Defects which do not significantly affect the usability of the product will not be covered by the warranty. We reserve the right to revise the manual and online documentation and to make changes from time to time in the contents hereof without obligation to notify any person of such revision or changes.

Be a Registered Owner

• Web registration is preferred. You can register your Vigor router via https://myvigor.draytek.com.

Firmware & Tools Updates

• Due to the continuous evolution of DrayTek technology, all routers will be regularly upgraded. Please consult the DrayTek web site for more information on newest firmware, tools and documents.

Part I Installation

This part will introduce Vigor router and guide to install the device in hardware and software.

I-1 Introduction

This is a generic International version of the user guide. Specification, compatibility and features vary by region. For specific user guides suitable for your region or product, please contact local distributor.

Vigor2135 Series integrates IP layer QoS, NAT session/bandwidth management to help users control works well with large bandwidth.

The entertainment applications running over the home network infrastructure and home-based productivity for SOHO are growing while the broadband bandwidth is increasingly available within affordable budget along with deployment of FTTx. The fiber WAN port of Vigor2135FVn optimizes the throughput performance and flexibility for time-critical console gaming, multi-media streaming and P2P downloading as well as IP telephony. The four Gigabit Ethernet (10/100/1000 LAN ports) auto-sensing ports facilitate home networking with width-intensive applications! Through the combination of Fiber WAN and Gigabit LAN ports to optimize the bandwidth usage, the downstream data and voice packets for Triple play can be flawlessly displayed in endpoint devices, such as HDTV, desktop/laptop or analog/IP phone.

The Vigor2135FVn/Vac/ac series router gives you not only the 802.11n/ac standards for coverage, but also the time scheduling function to save your energy bill plus reducing the carbon footprint. For wireless security, it is also efficient for wireless network management. For instance, its "Wireless LAN isolation" can easily isolate wireless network for friends or guests. Then, the access rights of various wireless clients can be managed by "MAC address control" and deployed "WEP/WPA/WPA2" authentication. No need to remember passwords, you simply press "WPS" button on router and then enable users to securely connect laptop or computers to the router!

The fiber deployment (for Vigor2135FVn) lets businesses and common people have fatter pipe of accessing global network. DrayTek Vigor2135FVn Fiber Router is developed in compliance with the Super-fast broadband architecture and customized for users which already have Fiber to the building (FTTB) or Fiber to the home (FTTH). The bandwidth-consumed multimedia streaming and crystal-clear VoIP functionalities are realized through the Vigor2135FVn's upto-1000Mpbs (1 Gigabit) WAN throughput and advanced bandwidth management. You can apply the rules of Session Limit, Bandwidth Limit, Port Rate Control, QoS control list, Ports Priority to different traffic type for better efficiency.

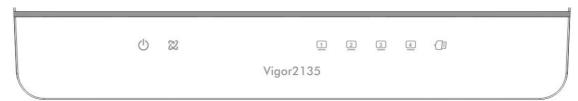

By making the most of your broadband line, the VoIP call will be carried to the destination via Internet. So you can save on the telephone bill. Combining the Internet Telephony service from the Internet Telephony Service Provider (ITSP), the Vigor2135FVn charter VoIP calls to be made to any legacy phone numbers, even including mobile and long distance numbers!

In addition, it supports the worldwide standard TR-069 management and customized triple play while most fiber routers could not have the above distinguished features.

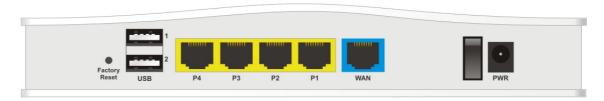

I-1-1 Indicators and Connectors

Before you use the Vigor router, please get acquainted with the LED indicators and connectors first.

I-1-1-1 Vigor2135

LED	Status	Explanation
415	Blinking	The router is powered on and running normally.
(Activity)	Off	The router is powered off.
0.2	On	Internet connection is ready.
62	Blinking	The data is transmitting.
WAN	Off	Internet connection is not ready.
	On	The LAN port is connected.
1 4	Blinking	The data is transmitting.
 LAN1/2/3/4	Off	The LAN port is disconnected.
ΔÞ	On	A USB device is connected and active.
USB	Blinking	The data is transmitting.

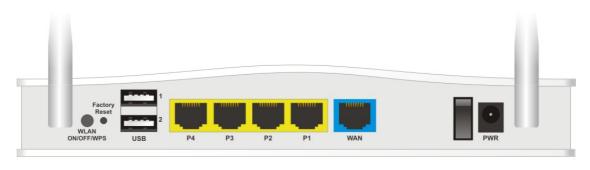

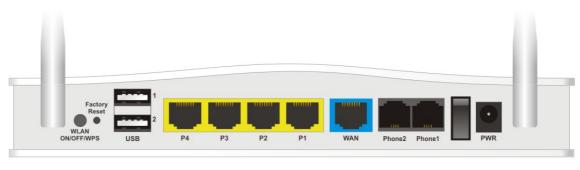

Interface	Description
Factory Reset	Restore the default settings. Usage: Turn on the router (ACT LED is blinking). Press the hole and keep for more than 5 seconds. When you see the ACT LED begins to blink rapidly than usual, release the button. Then the router will restart with the factory default configuration.
USB1~USB2	Connector for a USB device (for USB Modem or printer).
P4~P1	Connectors for local networked devices.
WAN	Connector for remote networked devices (by Ethernet cable).
ON/OFF	Power switch.
PWR	Connector for a power adapter.

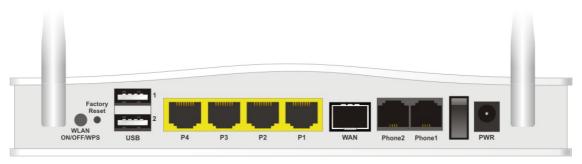

I-1-1-2 Vigor2135ac / Vigor2135Vac / Vigor2135FVac

LED	Status	Explanation		
	Blinking	The router is powered on and running normally.		
(Activity)	Blinking (quickly)	When both ACT and WLAN LEDs blink quickly, it means the WPS function is enabled and active. The system is waiting for a wireless station of connection.		
	Off	The router is powered off.		
22	On	Internet connection is ready.		
66	Blinking	The data is transmitting.		
WAN	Off	Internet connection is not ready.		
	Off	Internet connection is not ready.		
1, 2	On	The phone connected to this port is off-hook.		
(for "V" model)	Off	The phone connected to this port is on-hook.		
	Blinking	A phone call comes.		
2.43 53	On	Wireless access point is ready.		
~ WLAN	Blinking	Ethernet packets are transmitting over wireless LAN.		
,, <u>−</u> u,	Blinking (quickly)	When both ACT and WLAN LEDs blink quickly, it means the WPS function is enabled and active. The system is waiting for a wireless station of connection.		
	Off	The WLAN function is inactive.		
	On	The LAN port is connected.		
	Blinking	The data is transmitting.		
LAN1/2/3/4	Off	The LAN port is disconnected.		
USB USB	On	A USB device is connected and active.		
	Blinking	The data is transmitting.		

Interface	Description		
Wireless LAN ON/OFF/WPS	WLAN On - Press the button and release it within 2 seconds. When the wireless function is ready, the green LED will be on.		
	WLAN Off - Press the button and release it within 2 seconds to turn off the WLAN function. When the wireless function is not ready, the LED will be off.		
	WPS - When WPS function is enabled by web user interface, press this button for more than 2 seconds to wait for client's device making network connection through WPS.		
Factory Reset	Restore the default settings.		
	Usage: Turn on the router (ACT LED is blinking). Press the hole and keep for more than 5 seconds. When you see the ACT LED begins to blink rapidly than usual, release the button. Then the router will restart with the factory default configuration.		
USB1~USB2	Connector for a USB device (for 3G/4G USB Modem or printer).		
P4~P1	Connectors for local networked devices.		
WAN	Connector for remote networked devices (by Ethernet cable).		
WAN (FVac)	Connector for fiber connection for accessing the Internet.		

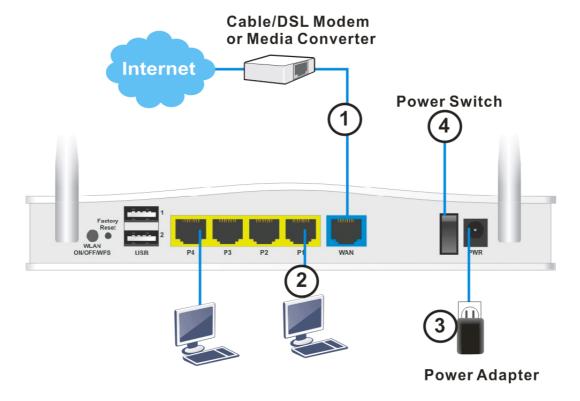

Phone2/Phone1 (for "V" model)	Connector of analog phone for VoIP communication.
ON/OFF	Power switch.
PWR	Connector for a power adapter.

I-2 Hardware Installation

I-2-1 Installing Vigor Router

Before starting to configure the router, you have to connect your devices correctly. Here we take Vigor2135ac as an example.

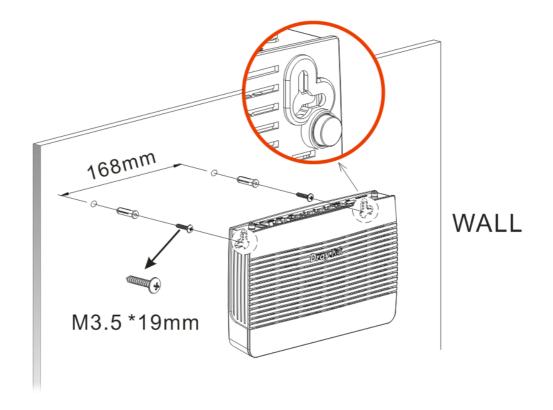

- 1. Connect the cable Modem/DSL Modem/Media Converter to any WAN port of router with Ethernet cable (RJ-45).
- 2. Connect one port of 4-port switch to your computer with a RJ-45 cable. This device allows you to connect 4 PCs directly.
- 3. Connect detachable antennas to the router.
- 4. Connect one end of the power cord to the power port of this device. Connect the other end to the wall outlet of electricity.
- 5. Power on the router.
- 6. Check the ACT and WAN, LAN LEDs to assure network connection. (For the hardware connection, we take "ac" model as an example.)

I-2-2 Wall-Mounted Installation

Vigor router has keyhole type mounting slots on the underside.

- 1. Drill two holes on the wall. The distance between the holes shall be 168mm.
- 2. Fit screws into the wall using the appropriate type of wall plug.

附註

建議的孔洞尺寸為 6.5 釐米(1/4 吋)。

3. 完成上述步驟後,路由器及可穩妥安置在牆壁上。

I-3 Accessing Web Page

- 1. Make sure your PC connects to the router correctly.
 - You may either simply set up your computer to get IP dynamically from the router or set up the IP address of the computer to be the same subnet as the default IP address of Vigor router 192.168.1.1. For the detailed information, please refer to the later section Trouble Shooting of the guide.
- 2. Open a web browser on your PC and type http://192.168.1.1. The following window will be open to ask for username and password.

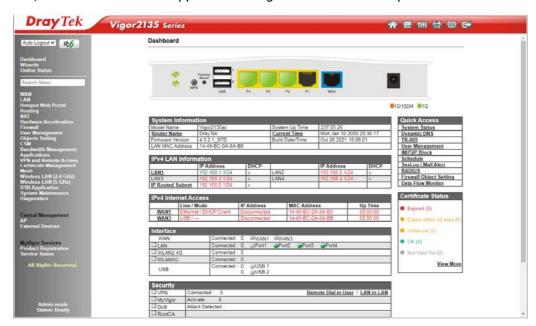

3. Please type "admin/admin" as the Username/Password and click Login.

Info

If you fail to access to the web configuration, please go to "Trouble Shooting" for detecting and solving your problem.

4. Now, the Main Screen will appear. Take Vigor2135ac as an example.

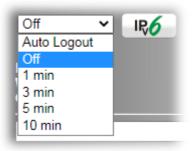

Info

The home page will be different slightly in accordance with the type of the router you have.

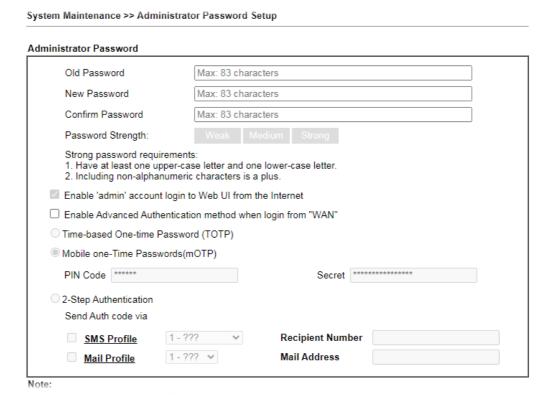

5. The web page can be logged out according to the chosen condition. The default setting is Auto Logout, which means the web configuration system will logout after 5 minutes without any operation. Change the setting for your necessity.

I-4 Changing Password

Please change the password for the original security of the router.

- 1. Open a web browser on your PC and type http://192.168.1.1. A pop-up window will open to ask for username and password.
- 2. Please type "admin/admin" as Username/Password for accessing into the web user interface with admin mode.
- 3. Go to System Maintenance page and choose Administrator Password.

4. Enter the login password (the default is "admin") on the field of Old Password. Type New Password and Confirm Password. Then click OK to continue.

Info

The maximum length of the password you can set is 23 characters.

5. Now, the password has been changed. Next time, use the new password to access the Web user interface for this router.

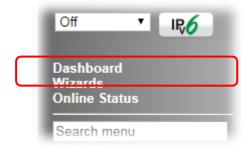

Info

Even the password is changed, the Username for logging onto the web user interface is still "admin".

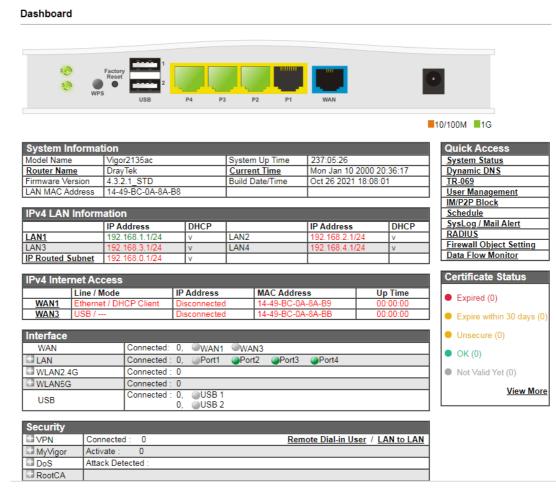

I-5 Dashboard

The Dashboard provides a convenient way to monitor the current status of the router, including firmware version, system resource usage, LAN and WAN connection uptimes, and interface usage. It is refreshed every 5 seconds with the latest information.

For the Dashboard is the landing page after logging into the web configuration utility, you can also bring up the Dashboard by clicking on the Dashboard on the menu bar.

The Dashboards of other Vigor2135 models are may vary slightly due to differences in features. The figure below shows the Dashboard of the Vigor2135ac.

The System Information section displays general information about the router, such as system uptime, system time, and firmware version.

The IPv4 Internet Access section shows the IPv4 connection status of the WAN ports, including their access modes, IP addresses, MAC addresses and uptimes.

The IPv6 Internet Access section shows the IPv6 connection status of the WAN port that has IPv6 enabled. Unlike IPv4, IPv6 support is limited to one WAN port at a time, so there is always at most one IPv6 WAN connection shown.

The Interface section shows the physical connection status of the WAN, Ethernet, Wi-Fi and USB interfaces.

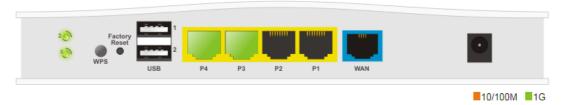

The Security section shows the states of the security-related features, including VPN, Web Content Filter and App Enforcement.

The System Resource section shows the current CPU and memory usage of the router.

I-5-1 Virtual Panel

At the top of the Dashboard page is the Virtual Panel, a graphical simulation of the front panel of the router.

The WAN and LAN connectors are shaded with various colours to indicate their status at any given point in time.

Port	Color	Description	
USB	Black	No USB device is connected.	
	Green	A USB device is connected.	
LAN	Black	LAN port is disconnected.	
P4 ~ P1	Green	LAN port is connected at 1 Gbps.	
	Orange	LAN port is connected at 10/100 Mbps.	
WAN	Black	WAN port is disconnected.	
	Green	WAN port is connected at 1 Gbps.	
	Orange	WAN port is connected at 10/100 Mbps.	

For detailed information about the LED display, refer to I-1-1 LED Indicators and Connectors.

I-5-2 Name with a Link

A name with a link (e.g., <u>Router Name</u>, <u>Current Time</u>, <u>WAN#</u> and etc.) below means you can click it to open the configuration page for modification.

I-5-3 Quick Access for Common Used Menu

All the menu items can be accessed and arranged orderly on the left side of the main page for your request. For your convenience, some of the most-frequently-used items in the Web Configuration Utility are listed under the Quick Access section on the Dashboard.

Look at the right side of the Dashboard. You will find a group of common used functions grouped under Quick Access.

Quick Access
System Status
Dynamic DNS
TR-069
User Management
IM/P2P Block
<u>Schedule</u>
SysLog / Mail Alert
RADIUS
Firewall Object Setting
Data Flow Monitor

Move your mouse cursor on any one of the links and click on it. The corresponding setting page will be open immediately.

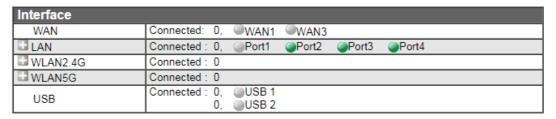

Hyperlink	Destination
System Status	System Maintenance >> System Status
Dynamic DNS	Applications >> Dynamic DNS Setup
TR-069	System Maintenance >> TR-069 Setting
User Management	User Management >> User Profile
IM/P2P Block	CSM >> APP Enforcement Profile
Schedule	Applications >> Schedule
SysLog / Mail Alert	System Maintenance >> SysLog / Mail Alert Setup
LDAP	Applications >> Active Directory /LDAP
RADIUS	Applications >> RADIUS/TACACS+
Firewall Object Setting	Objects Setting >> IP Object
Data Flow Monitor	Diagnostics >> Data Flow Monitor

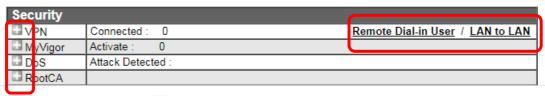

In addition, quick access for VPN security settings such as Remote Dial-in User and LAN to LAN are located on the bottom of this page. Scroll down the page to find them and use them if required.

System Information					
Model Name	Vigor2135ac	System Up Time	237:05:26		
Router Name	DrayTek	Current Time	Mon Jan 10 2000 20:36:17		
Firmware Version	4.3.2.1_STD	Build Date/Time	Oct 26 2021 18:08:01		
LAN MAC Address	14-49-BC-0A-8A-B8				

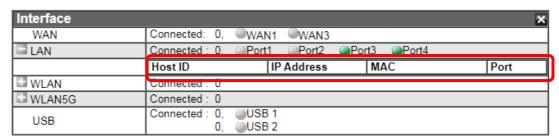

IPv4 LAN Information					
	IP Address	DHCP		IP Address	DHCP
LAN1	192.168.1.1/24	٧	LAN2	192.168.2.1/24	٧
LAN3	192.168.3.1/24	٧	LAN4	192.168.4.1/24	٧
IP Routed Subnet	192.168.0.1/24	v			

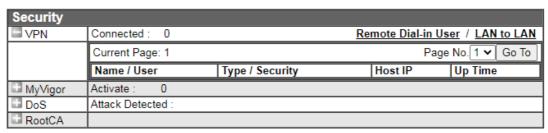

IPv4 Internet Access				
	Line / Mode	IP Address	MAC Address	Up Time
WAN1	Ethernet / DHCP Client	Disconnected	14-49-BC-0A-8A-B9	00:00:00
WAN3	USB /	Disconnected	14-49-BC-0A-8A-BB	00:00:00

Note that there is a plus () icon appearing on Interface/Security. Click it to review the connection(s) used presently.

Host connected physically to the router via LAN port(s) will be displayed with green circles in the field of Connected.

All of the hosts (including wireless clients) displayed with Host ID, IP Address and MAC address indicates that the traffic would be transmitted through LAN port(s) and then the WAN port. The purpose is to perform the traffic monitor of the host(s).

I-5-4 GUI Map

All the functions the router supports are listed with table clearly in this page. Users can click the function link to access into the setting page of the function for detailed configuration. Click the icon on the top of the main screen to display all the functions.

GUI Map

Dashboard		Certificate Management	
Wizards		-	Local Certificate
	Quick Start Wizard		Trusted CA Certificate
	Service Activation Wizard		Certificate Backup
	VPN Client Wizard		Self-Signed Certificate

	Static Route		General Setup

I-5-5 Web Console

It is not necessary to use the telnet command via DOS prompt. The changes made by using web console have the same effects as modified through web user interface. The functions/settings modified under Web Console also can be reviewed on the web user interface.

Click the Web Console icon on the top of the main screen to open the following screen.

I-5-6 Config Backup

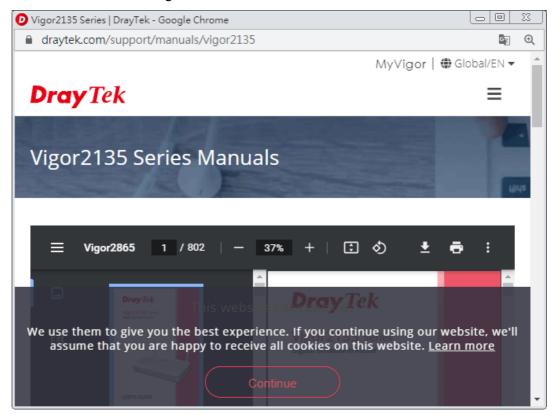

There is one way to store current used settings quickly by clicking the Config Backup icon. It allows you to backup current settings as a file. Such configuration file can be restored by using System Maintenance>>Configuration Backup.

I-5-7 Manual Download

Click this icon to open online user's guide of Vigor router. This document offers detailed information for the settings on web user interface.

I-5-8 Logout

Click this icon to exit the web user interface.

I-5-9 Online Status

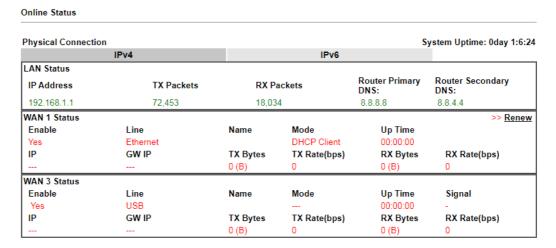

I-5-9-1 Physical Connection

The Physical Connection page displays the status of all the physical network interfaces, including LAN, WAN and DSL.

The information shown for every interface can be in green, indicating the interface is enabled and online; or red, indicating the interface is either disabled or offline.

Physical Connection for IPv4 Protocol

This IPv4 tab displays IPv4 related information of all the LAN and WAN interfaces, plus the DSL connection status.

Physical Connection for IPv6 Protocol

This IPv6 tab displays IPv6 related information of all the LAN and WAN interfaces.

Online Status

Physical Connection IPv4			Syste IPv6	
LAN Status				
IP Address				
FE80::1649:BCFF	:FE0A:8AB8/64 (Link)			
TX Packets	RX Packets	TX Bytes	RX Bytes	
25	96	1,958	9,056	
WAN1 IPv6 Status				
Enable	Mode	Up Time		
No	Offline			
IP			Gateway IP	
WAN3 IPv6 Status				
Enable	Mode	Up Time		
No	Offline			
IP			Gateway IP	

Detailed explanation (for IPv4) is shown below:

Item	Description	
LAN Status	Primary DNS-Displays the primary DNS server address for WAN interface.	
	Secondary DNS -Displays the secondary DNS server address for WAN interface.	
	IP Address-Displays the IP address of the LAN interface.	
	TX Packets-Displays the total transmitted packets at the LAN interface.	
	RX Packets-Displays the total received packets at the LAN interface.	
WAN# Status	Enable - Yes in red means such interface is available but not enabled. Yes in green means such interface is enabled.	
	Mode - Displays the type of WAN connection (e.g., PPPoE).	
	Up Time - Displays the total uptime of the interface.	
	IP - Displays the IP address of the WAN interface.	
	GW IP - Displays the IP address of the default gateway.	
	TX Packets - Displays the total transmitted packets at the WAN interface.	
	TX Rate - Displays the speed of transmitted octets at the WAN interface.	
	RX Packets - Displays the total number of received packets at the WAN interface.	
	RX Rate - Displays the speed of received octets at the WAN interface.	

Detailed explanation (for IPv6) is shown below:

Item	Description
LAN Status	IP Address- Displays the IPv6 address of the LAN interface
	TX Packets-Displays the total transmitted packets at the LAN interface.
	RX Packets-Displays the total received packets at the LAN interface.
	TX Bytes - Displays the speed of transmitted octets at the LAN interface.
	RX Bytes - Displays the speed of received octets at the LAN interface.
WAN IPv6 Status	Enable - No in red means such interface is available but not enabled. Yes in green means such interface is enabled. No in red means such interface is not available.
	Mode - Displays the type of WAN connection (e.g., TSPC).
	Up Time - Displays the total uptime of the interface.
	IP - Displays the IP address of the WAN interface.
	Gateway IP - Displays the IP address of the default gateway.

Info

The words in green mean that the WAN connection of that interface is ready for accessing Internet; the words in red mean that the WAN connection of that interface is not ready for accessing Internet.

I-5-9-2 Virtual WAN

The Virtual WAN screen displays the status of the 3 virtual WAN interfaces.

Virtual WAN are used by TR-069 management, VoIP service and so on.

The field of Application will list the purpose of such WAN connection.

Online Status

Virtual WAN				Sys	tem Uptime: 1:15:28
WAN 4 Status					
Enable	Line	Name	Mode	Up Time	Application
No	Ethernet			00:00:00	
IP	GW IP	TX Packets	TX Rate(Bps)	RX Packets	RX Rate(Bps)
		0	0	0	0
WAN 5 Status					
Enable	Line	Name	Mode	Up Time	Application
No	Ethernet			00:00:00	
IP	GW IP	TX Packets	TX Rate(Bps)	RX Packets	RX Rate(Bps)
		0	0	0	0
WAN 6 Status					
Enable	Line	Name	Mode	Up Time	Application
No	Ethernet			00:00:00	
IP	GW IP	TX Packets	TX Rate(Bps)	RX Packets	RX Rate(Bps)
		0	0	0	0

Detailed explanation is shown below:

Item	Description
Enable	Yes- Virtual WAN interface is enabled.

Description
•
No- Virtual WAN interface is disabled.
Ethernet- The Ethernet port is used for this virtual WAN.
The IPv6 addresses of the WAN interface. The global address is routable whereas the link local address is for LAN use only.
Gateway address of the IPv6 WAN connection.
Yes: IPv6 support on the WAN interface is enabled.
No: IPv6 support on the WAN interface is disabled.
110. If vo support off the WAN interface is disabled.
The IPv6 access mode, which can be one of Offline, PPP, TSPC, AICCU, DHCPv6 Client, Static IPv6, 6in4 Static Tunnel, and 6rd.
The IPv6 addresses of the WAN interface. The global address is routable whereas the link local address is for LAN use only.
Gateway address of the IPv6 WAN connection.
Total number of IPv6 packets leaving the WAN interface.
The speed of transmitted octets.
Total number of IPv6 packets received by the WAN interface.
The speed of received octets.

I-6 Quick Start Wizard

The Quick Start Wizard allows you to quickly and easily set the router up for Internet access.

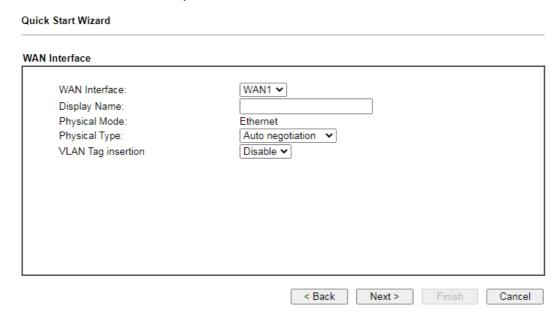

Note that only one specific WAN interface can be configured each time the wizard is run. If you have additional WAN interfaces to configure, rerun the wizard and select the appropriate WAN interface. As an alternative, you may use the WAN menu item.

Go to Wizards>>Quick Start Wizard. The first screen of Quick Start Wizard is entering login password. After entering the password, please click Next to proceed.

Please enter an alpha-num	neric string as your Password
Old Password	Max: 83 characters
New Password	Max: 83 characters
Confirm Password	Max: 83 characters
Password Strength:	Weak Medium Strong
Including non-alphanum	-case letter and one lower-case letter. eric characters is a plus. e password unchanged, leave the password blank and press "Next"

On the next screen, you can select a WAN interface to configure. The configuration steps that follow vary slightly depending on the type of Internet connection you have.

If Ethernet interface is used, please choose WAN1; if USB modem is used, please choose WAN3. Then click Next for next step.

Each WAN interface will bring up different configuration page. Refer to the following for detailed information.

I-6-1 Ethernet Connection on WAN1

WAN1 can be configured for physical mode of Ethernet.

Available settings are explained as follows:

Item	Description
Display Name	Optional name that identifies the connection.
Physical Type	Ethernet link parameters.
	Auto negotiation - Speed and duplex mode are automatically configured by negotiating with the connected device.
	10M half duplex - 10 Mbit/s Ethernet half duplex.
	10M full duplex - 10 Mbit/s Ethernet full duplex.
	100M half duplex - 100 Mbit/s Fast Ethernet half duplex.
	100M full duplex - 100 Mbit/s Fast Ethernet full duplex.
	1000M full duplex - 1 Gbit/s Gigabit Ethernet full duplex.
VLAN Tag insertion	Enables or disables 802.1q VLAN tagging of WAN traffic. Some Internet connections require the use of VLAN tags. For more information, please contact your Internet Service Provider.
	Enable - Enables VLAN tagging of all frames leaving the WAN interface.
	Tag value - VLAN identifier, used to tag outbound WAN traffic. Valid tag values range from 0 to 4095.
	 Priority - 802.1p Class of Service, used to assign the traffic priority. Valid priority values range from 0 (highest) to 7 (lowest).
	Disable - Disables VLAN tagging.

On the next page as shown below, please select the appropriate Internet access type according to the information from your ISP. For example, you should select PPPoE mode if the ISP provides you PPPoE interface. Then click Next for next step.

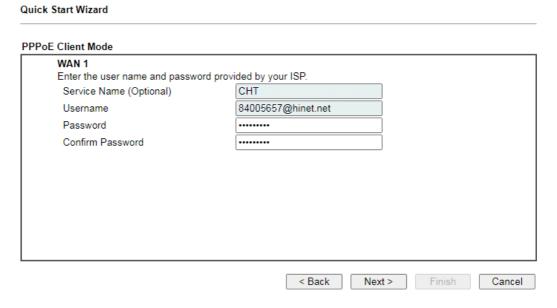

Ethernet WAN1 - PPPoE

Quick Start Wizard

1. Choose WAN1 as the WAN Interface and choose Ethernet as the Physical Mode. Click the Next button. The following page will be open for you to specify Internet Access Type.

WAN 1				
Select one of the fo	ollowing Internet Access typ	es provided by you	ur ISP.	
	PPPoE			
	O PPTP			
	O L2TP			
	O Static IP			
	O DHCP			
	0 21101			

2. Click PPPoE (Point-to-Point Protocol over Ethernet) as the Internet Access Type. Then click Next to continue.

Item	Description
Service Name (Optional)	PPP service name tag. Required by some ISPs. Leave blank unless instructed otherwise by your ISP.
Username	Username provided by the ISP for PPPoE/PPPoA authentication. Maximum length is 63 characters.
Password	Password provided by the ISP for PPPoE/PPPoA authentication. Maximum length is 62 characters.
Confirm Password	Re-enter the password for confirmation.

Item	Description
Back	Click it to return to previous setting page.
Next	Click it to get into the next setting page.
Cancel	Click it to give up the quick start wizard.

3. Fill in the fields on the page using information provided by your ISP. Then click Next for viewing the summary of all the settings you have entered.

4. If you are satisfied with what you see, click Finish to save your changes. The following message appears indicating that the changes have been successfully saved.

Quick Start Wizard Setup OK!

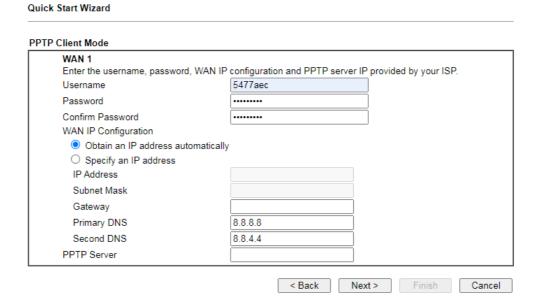

5. Now, you can enjoy surfing on the Internet.

Ethernet WAN1 - PPTP/L2TP

1. Choose WAN1 as the WAN Interface and choose Ethernet as the Physical Mode. Click the Next button. The following page will be open for you to specify Internet Access Type.

nect to Internet					
WAN 1					
Select one of the follow	wing Internet Access type	s provided by you	r ISP.		
	○ PPPoE				
	PPTP				
	O L2TP				
	O Static IP				
	ODHCP				
	O Brioi				
		< Back	Next >	Finish	Can

2. Click PPTP/L2TP (Point-to-Point Tunneling Protocol/ Layer 2 Tunneling Protocol) as the Internet Access Type. Then click Next to continue.

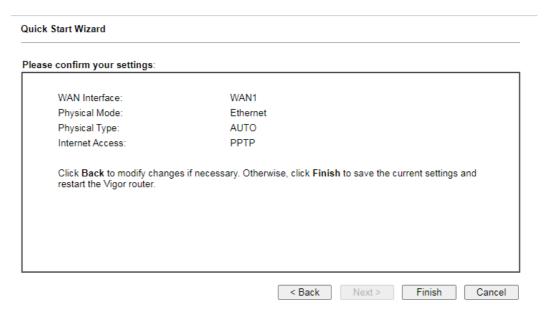

Item	Description
Username	User name provided by the ISP. The maximum length of the user name you can set is 63 characters.
Password	Password provided by the ISP. The maximum length of the password you can set is 62 characters.
Confirm Password	Re-enter the password for confirmation.

WAN IP Configuration	Obtain an IP address automatically - The router receives IP configuration information from a DHCP server.
	Specify an IP address - Use the IP address, Subnet Mask and Gateway values specified below.
	IP Address - Static WAN IP address of the router.
	• Subnet Mask -Subnet mask of the Internet connection.
	Gateway - IP address of the remote gateway.
	 Primary DNS - IP address of the Primary DNS server.
	• Second DNS - IP address of the Secondary DNS server.
PPTP Server / L2TP Server	IP address of the PPTP or L2TP server.
Back	Click it to return to previous setting page.
Next	Click it to get into the next setting page.
Cancel	Click it to give up the quick start wizard.

3. Fill in the fields on the page using information provided by your ISP. Then click Next for viewing the summary of all the settings you have entered.

Quick Start Wizard

4. If you are satisfied with what you see, click Finish to save your changes. The following message appears indicating that the changes have been successfully saved.

Quick Start Wizard Setup OK!

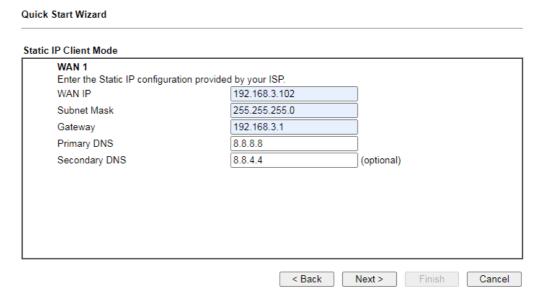

5. Now, you can enjoy surfing on the Internet.

Ethernet WAN1 - Static IP

1. Choose WAN1 as the WAN Interface and choose Ethernet as the Physical Mode. Click the Next button. The following page will be open for you to specify Internet Access Type.

Quick Start Wizard	
Connect to Internet	
WAN 1 Select one of the following Internet Acces PPPOE PPTP L2TP Static DHCP	P
	< Back Next > Finish Cancel

2. Click Static IP (Statically assigned IP address) as the Internet Access type. Simply click Next to continue.

Item	Description
WAN IP	Static WAN IP address of the router.
Subnet Mask	Subnet mask of the Internet connection.
Gateway	IP address of the remote gateway.
Primary DNS	IP address of the Primary DNS server.
Secondary DNS	IP address of the Secondary DNS server.
Back	Click it to return to previous setting page.

Next	Click it to get into the next setting page.
Cancel	Click it to give up the quick start wizard.

3. Fill in the fields on the page using information provided by your ISP. Then click Next for viewing the summary of all the settings you have entered.

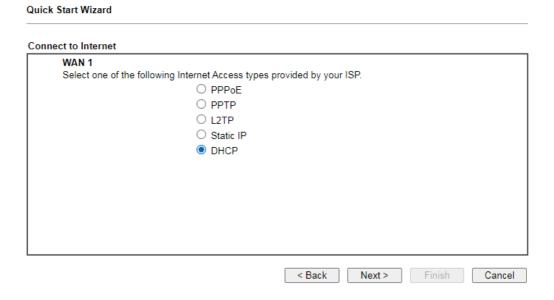

4. If you are satisfied with what you see, click Finish to save your changes. The following message appears indicating that the changes have been successfully saved.

Quick Start Wizard Setup OK!

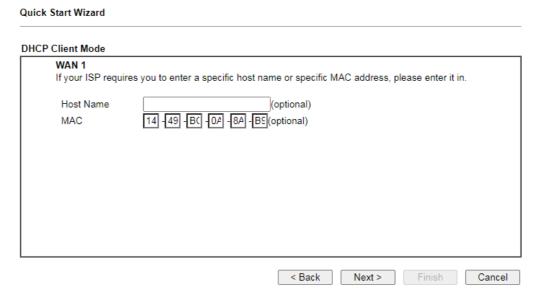

5. Now, you can enjoy surfing on the Internet.

Ethernet WAN1 - DHCP

 Choose WAN1 as the WAN Interface and choose Ethernet as the Physical Mode. Click the Next button. The following page will be open for you to specify Internet Access Type.

2. Click DHCP (Dynamic Host Configuration Protocol) as the Internet Access type. Simply click Next to continue.

Available settings are explained as follows:

Item	Description
Host Name	Hostname required by some ISPs. Maximum length of the host name is 39 characters.
MAC	MAC address of the WAN interface. Required by some ISPs that authenticate by MAC addresses.
Back	Click it to return to previous setting page.
Next	Click it to get into the next setting page.
Cancel	Click it to give up the quick start wizard.

3. Fill in the fields on the page using information provided by your ISP. Then click Next for viewing the summary of all the settings you have entered.

4. If you are satisfied with what you see, click Finish to save your changes. The following message appears indicating that the changes have been successfully saved.

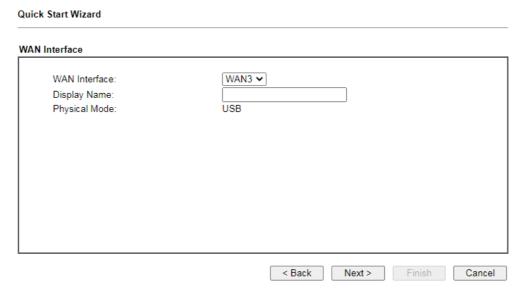

Quick Start Wizard Setup OK!

5. Now, you can enjoy surfing on the Internet.

I-6-2 USB Connection on WAN3

If you will be using a USB modem to connect to the Internet, you will first need to connect the modem to one of the USB ports before proceeding with the following steps.

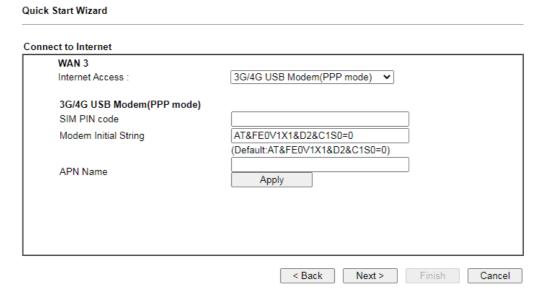

Choose WAN3 as WAN Interface.

Available settings are explained as follows:

Item	Description
Display Name	Optional name that identifies the connection.

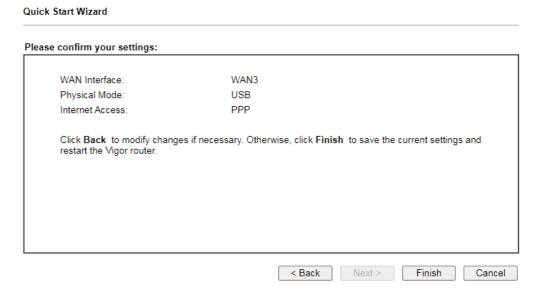

2. Then, click Next for getting the following page.

Item	Description
Internet Access	3G/4G USB Modem(PPP mode) - Point-to-Point Protocol is used to establish a connection.
	4G USB Modem(DHCP mode) - Dynamic Host Configuration

	Protocol is used to establish a connection.
3G/4G USB Modem (PPP mode)	SIM Pin code - PIN code of the SIM card in the modem. The maximum length of the PIN is 15 characters.
	Modem Initial String - String to be sent to the modem during initialization. The default value should suffice in most cases. If you need assistance with setting this value, please contact your ISP or carrier. The maximum length of the string is 47 characters.
	APN Name - Access Point Name to be used for the connection. Please contact your ISP or carrier for the appropriate value. Enter the name and click Apply.
3G/4G USB Modem (DHCP mode)	SIM Pin code - PIN code of the SIM card in the modem. The maximum length of the PIN is 15 characters.
	Network Mode - Force Vigor router to connect Internet with the mode specified here. If you choose 4G/3G/2G as network mode, the router will choose a suitable one according to the actual wireless signal automatically.
	APN Name - Access Point Name to be used for the connection. Please contact your ISP or carrier for the appropriate value. Enter the name and click Apply.
Back	Click it to return to previous setting page.
Next	Click it to get into the next setting page.
Cancel	Click it to give up the quick start wizard.

3. Fill in the fields on the page using information provided by your ISP. Then click Next for viewing the summary of all the settings you have entered.

4. If you are satisfied with what you see, click Finish to save your changes. The following message appears indicating that the changes have been successfully saved.

Quick Start Wizard Setup OK!

5. Now, you can enjoy surfing on the Internet.

I-7 Service Activation Wizard

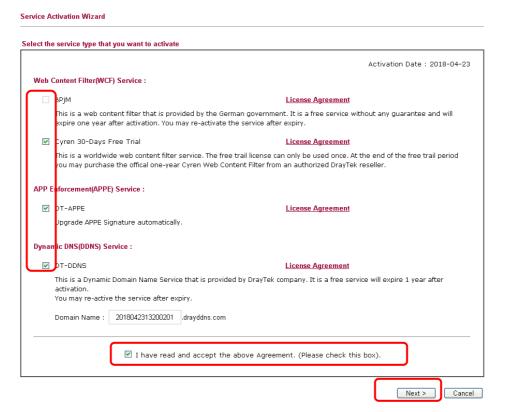

The Service Activation Wizard guides you through the activation of the Web Content Filter (WCF) and Application Enforcement (APPE) free trial subscriptions. For detailed information on the WCF and APPE services, please see the sections Web Content Filter Profile and APP Enforcement Profile.

Note: You must log in as the administrator (admin mode) to use the Service Activation Wizard.

1. Open Wizards>>Service Activation Wizard.

2. The screen of Service Activation Wizard will be shown as follows. You can activate the Web content filter services and/or APPE enforcement service and / or DDNS service at the same time or individually. When you finish the selection, please click Next.

Info

- BPjM is web content filter (WCF) for German Speaking users. It is ideal for your family to provide more Internet security for youngsters.
- Cryan 30-day trial is WCF which offers 30-day trial period.

- DT-APPE, developed by DrayTek, offers a mechanism to upgrade APPE signature automatically.
- DT-DDNS, developed by DrayTek, offers one year free charge service of dynamic DNS service for internal use.
- 3. A confirmation page detailing your selection will be displayed. Please click Activate.

Info

The service will be activated and applied as the default rule configured in Firewall>>General Setup.

4. Now, the web page will display the service that you have activated according to your selection(s).

I-8 Registering Vigor Router

You have finished the configuration of Quick Start Wizard and you can surf the Internet at any time. Now it is the time to register your Vigor router to MyVigor website for getting more service. Please follow the steps below to finish the router registration.

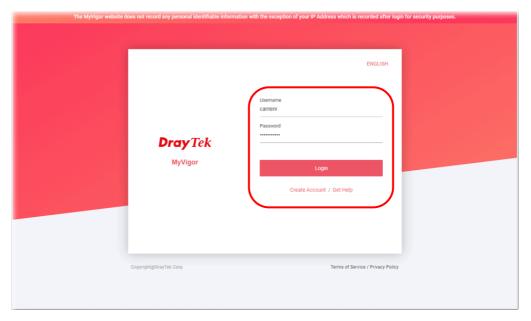

Please login the web configuration interface of Vigor router by typing "admin/admin" as User Name / Password.

2 Click Support Area>>Production Registration from the home page.

3 A Login page will be shown on the screen. Please Enter the account and password that you created previously. And click Login.

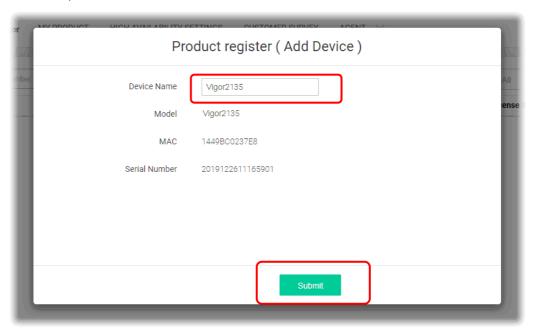

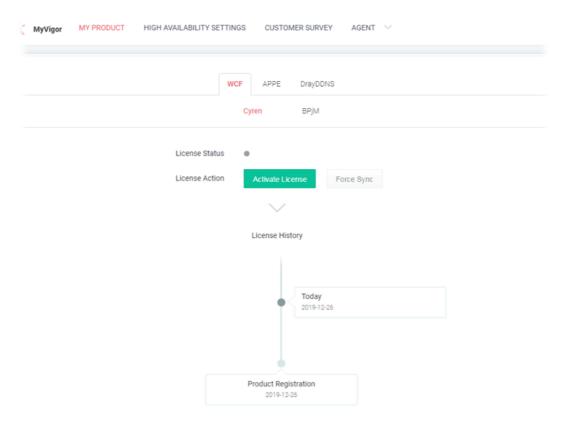

Info

If you haven't an accessing account, please refer to section Creating an Account for MyVigor to create your own one. Please read the articles on the Agreement regarding user rights carefully while creating a user account.

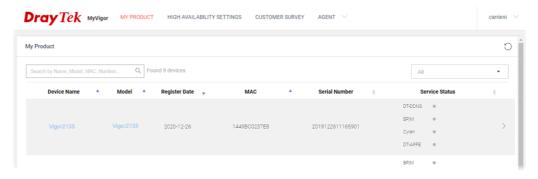

The following page will be displayed after you logging in MyVigor. Type a nickname for the router, then click Submit.

When the following page appears, your router information has been added to the database. Your router has been registered to *myvigor* website successfully.

6 Clicking MYPRODUCT for viewing the general information of the registered router on MyVigor website.

This page is left blank.

Part II Connectivity

WAN

ΙΔΝ

NAT

Applications

Routing

It means wide area network. Public IP will be used in WAN.

It means local area network. Private IP will be used in LAN. Local Area Network (LAN) is a group of subnets regulated and ruled by router. The design of network structure is related to what type of public IP addresses coming from your ISP.

When the data flow passing through, the Network Address Translation (NAT) function of the router will dedicate to translate public/private addresses, and the packets will be delivered to the correct host PC in the local area network.

DNS, LAN DNS, IGMP, LDAP, UpnP, IGMP, WOL, RADIUS, SMS, Bonjour

Static Route, Load-Balance/Route Policy

II-1 WAN

It allows users to access Internet.

Basics of Internet Protocol (IP) Network

IP means Internet Protocol. Every device in an IP-based Network including routers, print server, and host PCs, needs an IP address to identify its location on the network. To avoid address conflicts, IP addresses are publicly registered with the Network Information Centre (NIC). Having a unique IP address is mandatory for those devices participated in the public network but not in the private TCP/IP local area networks (LANs), such as host PCs under the management of a router since they do not need to be accessed by the public. Hence, the NIC has reserved certain addresses that will never be registered publicly. These are known as *private* IP addresses, and are listed in the following ranges:

From 10.0.0.0 to 10.255.255.255 From 172.16.0.0 to 172.31.255.255 From 192.168.0.0 to 192.168.255.255

What are Public IP Address and Private IP Address

As the router plays a role to manage and further protect its LAN, it interconnects groups of host PCs. Each of them has a private IP address assigned by the built-in DHCP server of the Vigor router. The router itself will also use the default private IP address: 192.168.1.1 to communicate with the local hosts. Meanwhile, Vigor router will communicate with other network devices through a public IP address. When the data flow passing through, the Network Address Translation (NAT) function of the router will dedicate to translate public/private addresses, and the packets will be delivered to the correct host PC in the local area network. Thus, all the host PCs can share a common Internet connection.

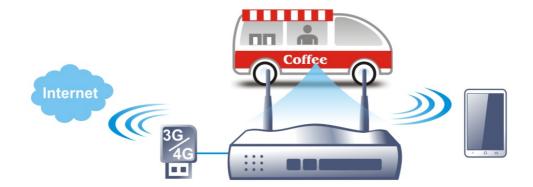

Get Your Public IP Address from ISP

In ADSL deployment, the PPP (Point to Point)-style authentication and authorization is required for bridging customer premises equipment (CPE). Point to Point Protocol over Ethernet (PPPoE) connects a network of hosts via an access device to a remote access concentrator or aggregation concentrator. This implementation provides users with significant ease of use. Meanwhile it provides access control, billing, and type of service according to user requirement.

When a router begins to connect to your ISP, a serial of discovery process will occur to ask for a connection. Then a session will be created. Your user ID and password is authenticated via PAP or CHAP with RADIUS authentication system. And your IP address, DNS server, and other related information will usually be assigned by your ISP.

Network Connection by 3G/4G USB Modem

For 3G/4G mobile communication through Access Point is popular more and more, Vigor2135 adds the function of 3G/4G network connection for such purpose. By connecting 3G/4G USB Modem to the USB port of Vigor2135, it can support LTE/HSDPA/UMTS/EDGE/GPRS/GSM and the future 3G/4G standard (HSUPA, etc). Vigor2135n with 3G/4G USB Modem allows you to receive 3G/4G signals at any place such as your car or certain location holding outdoor activity and share the bandwidth for using by more people. Users can use LAN ports on the router to access Internet. Also, they can access Internet via 802.11(a/b/g/n/ac) wireless standard, and enjoy the powerful firewall, bandwidth management, and VPN features of Vigor2135n series.

After connecting into the router, 3G/4G USB Modem will be regarded as the WAN3/WAN4 port. However, the original WAN1 and WAN2 still can be used and Load-Balance can be done in the router. Besides, 3G/4G USB Modem in WAN3/WAN4 also can be used as backup device. Therefore, when WAN1 and WAN2 are not available, the router will use 3.5G for supporting automatically. The supported 3G/4G USB Modem will be listed on DrayTek web site. Please visit www.draytek.com for more detailed information.

Web User Interface

II-1-1 General Setup

This section will introduce some general settings of Internet and explain the connection modes for WAN1 and WAN3 in details.

This router supports multiple-WAN function. It allows users to access Internet and combine the bandwidth of the multiple WANs to speed up the transmission through the network. Each WAN port can connect to different ISPs, even if the ISPs use different technology to provide telecommunication service (such as DSL, Cable modem, etc.). If any connection problem occurred on one of the ISP connections, all the traffic will be guided and switched to the normal communication port for proper operation. Please configure WAN1 and WAN3 settings.

This webpage allows you to set general setup for WAN1 and WAN3 respectively.

Available settings are explained as follows:

Item	Description
Index	Click on the WAN# link to bring up its settings page. WAN1: Ethernet WAN interface. WAN3: USB modem connected.
Enable	Select to enable WAN interface.
Physical Mode / Type	Display the physical mode and physical type of such WAN interface.
Active Mode	Display whether such WAN interface is Active device or backup device. Always On - WAN is always enabled.
	Failover - Display the backup WAN interface for this WAN when it is disabled.

After finished the above settings, click OK to save the settings.

II-1-1-1 WAN1 (Ethernet)

WAN1 can be configured for physical mode of Ethernet.

0

 $(0 \sim 4095)$

WAN >> General Setup WAN 1 Enable: Yes 🕶 Display Name: Physical Mode: Ethernet Physical Type: 10M half duplex 💌 Active Mode: Always On ∨ VLAN Tag insertion Customer Service Disable 🕶 Disable 🕶 Priority Priority Tag value Tag value

0

 $(0 \sim 7)$

Available settings are explained as follows:

Item	Description
Enable	Yes - WAN is enabled. No - WAN is disabled.
Display Name	Optional name to identify the WAN. Enter the description for the interface.
Physical Mode	Physical connection used for this WAN. Ethernet - WAN connection to be established through the WAN1 Ethernet port.
Physical Type	(Available only when Physical Mode is set to Ethernet) Auto negotiation- Ethernet connection speed is automatically negotiation between the router and the ISP's equipment. 10M half duplex-Ethernet speed is manually set to 10 Mbit/s, half duplex. 10M full duplex- Ethernet speed is manually set to 10 Mbit/s, full duplex. 100M half duplex- Ethernet speed is manually set to 100 Mbit/s, half duplex. 100M full duplex- Ethernet speed is manually set to 100 Mbit/s, full duplex. 1000M full duplex- Ethernet speed is manually set to 100 Mbit/s, full duplex. 1000M full duplex- Ethernet speed is manually set to 1 Gbit/s, full duplex.
VLAN Tag insertion	Determines whether 802.1ad VLAN tags will be added to outbound WAN traffic in ADSL/VDSL 2 mode. Check with your ISP to determine if this is required, and if so, the proper tag and priority values to be used. Enabled - Tagging enabled. Disabled - Tagging disabled. Tag value - Value must be between 1 and 4095. Priority - Priority code point (PCP). Value must be between 0 and 7.

After finished the above settings, click OK to save the settings.

II-1-1-2 WAN3 (USB)

To use 3G/4G network connection through 3G/4G USB Modem, please configure WAN3 interface.

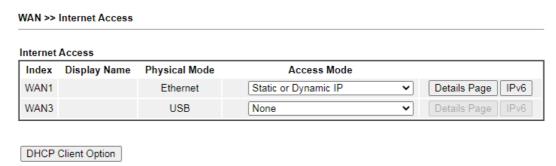

Available settings are explained as follows:

Item	Description
Enable	Yes - WAN is enabled. No - WAN is disabled.
Display Name	Optional name to identify the WAN. Enter the description for the interface.
Physical Mode	Physical connection used for this WAN. USB - WAN connection to be established through USB.
Active Mode	Always On - WAN is always enabled. Failover - WAN is enabled only when other WAN ports specified in Backup have lost connection.

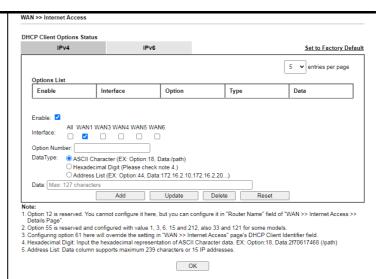

After finished the above settings, click OK to save the settings.

II-1-2 Internet Access

For the router supports multi-WAN function, the users can set different WAN settings (for WAN1, WAN3) for Internet Access. Due to different Physical Mode for WAN interface, the Access Mode for these connections also varies. Refer to the following figures for examples.

Item	Description
Index	The WAN interface.
Display Name	Reflects the Display Name configured for the WAN in the General Setup section.
Physical Mode	Reflects the Physical Mode configured for the WAN in the General Setup section.
Access Mode	Internet access mode of the WAN. The details page of that mode will be popped up. If not, click Details Page for accessing the page to configure the settings.
Details Page	Click this button to bring up the Internet Access settings page.
IPv6	Click this button to bring up the IPv6 settings page. When IPv6 is enabled, the button label is shown in green: - IPv6 is enabled. - IPv6 is disabled.
DHCP Client Option	Click this button to configure additional DHCP client options. DHCP packets can be processed by adding option number and data information when such function is enabled and configured.

Options List - Shows all the DHCP options that have been configured in the system.

Enable/Disable - If selected, DHCP option entry is enabled. If unselected, DHCP option entry is disabled. Each DHCP option is composed by an option number with data. For example,

Option number:100

Data: abcd

When it is enabled, the specified values for DHCP option will be seen in DHCP reply packets.

Interface - WAN interface(s) to which this entry is applicable. WAN1 through WAN4 are physical WANs that can be set up in the WAN>>General Setup and WAN>>Internet Access sections. WAN4 through WAN6 are virtual WANs that can be set up in the WAN>>Multi-PVC/VLAN section.

Option Number - Enter a number for this function.

DataType - Choose the type (ASCII or Hex or Address List) for the data to be stored. Type of data in the Data field:

- ASCII Character: A text string. Example: /path.
- Hexadecimal Digit: A hexadecimal string. Valid characters are from 0 to 9 and from a to f. Example: 2f70617468.
- Address List: One or more IPv4 addresses, delimited by commas.

Data - Data of this DHCP option. Enter the content of the data to be processed by the function of DHCP option.

Info

If you choose to configure option 61 here, the detailed settings in WAN>>Interface Access will be overwritten.

II-1-2-1 WAN1 Details Page (PPPoE, Physical Mode: Ethernet)

To choose PPPoE as the accessing protocol of the Internet, please select PPPoE from the WAN>>Internet Access >>WAN1 page. The following web page will be shown.

WAN 1 Static or Dynamic IP PPTP/L2TP **PPPoE** IPv6 PPP/MP Setup O Enable Disable PPP PAP/CHAP/MS-CHAP/MS-CHAP√2 ∨ Authentication ISP Access Setup Idle Timeout second(s) Username Max: 63 characters IP Assignment (IPCP) O Static O Dynamic Password Max: 62 characters More Options Fixed IP Address WAN IP Alias PPPoE Pass-through¹ ☐ For Wired LAN Dial-Out Schedule ☐ For Wireless LAN Index(1-15) in Schedule Setup: => None **∨** => None WAN Connection Detection **∨** => None => None ~ Mode PPP Detect ✔ TTL MTU Change the TTL value 1500 (Max:1500) Path MTU Discovery Default MAC Address Use the following MAC Address 14:49:BC:0A:8A:BS OK Cancel

Note:

WAN >> Internet Access

VPN feature may be affected when the value of MTU is changed, please also check your value of VPN mss by using "VPN mss set" command.

We recommend to put the same decreased value on VPN mss. For example, reducing the MTU from 1500 -> 1400, then it will need to reduct 100 from mss value.

Item	Description
Enable/Disable	Enable or disable PPPoE access mode.
ISP Access Setup	Enter your allocated username, password and authentication parameters according to the information provided by your ISP.
	Username - Username provided by the ISP for PPPoE authentication.
	Password - Password provided by the ISP for PPPoE authentication.
	More Options - Click to display more options.
	 Service Name (Optional) - Sets the PPP service name tag. Required by some ISPs. Leave blank unless instructed otherwise by your ISP.
PPPoE Pass-through	The router offers PPPoE dial-up connection. Besides, you also can establish the PPPoE connection directly from local clients to your ISP via the Vigor router.
	For Wired LAN - If you check this box, PCs on the same network can use another set of PPPoE session (different with the Host PC) to access into Internet.
	For Wireless LAN - It is available for <i>n</i> model. If you check

	this box, PCs on the same wireless network can use another set of PPPoE session (different with the Host PC) to access into Internet.
WAN Connection Detection	Configures how the WAN connection is monitored.
	Mode - Choose PPP Detect or Ping Detect for the system to execute for WAN detection.
	 PPP Detect - The router broadcasts an PPP request every 5 seconds. If no response is received within 30 seconds, the WAN connection is deemed to have failed.
	 Ping Detect - The router sends an ICMP (Internet Control Message Protocol) echo request every second to the host, whose address is specified in the Ping IP field, to verify the WAN connection. If the remote host does not respond within 30 seconds, the WAN connection is deemed to have failed.
	If you choose Ping Detect as the detection mode, you have to enter required settings for the following items.
	 Primary/Secondary Ping IP - Enter Primary or Secondary IP address in this field for pinging.
	 Ping Gateway IP - Enable this setting to use current WAN gateway IP address for pinging.
	 With the IP address(es) pinging, Vigor router can check if the WAN connection is on or off.
	 TTL (Time to Live) - Time To Live, the maximum allowed number of hops to the ping destination. Valid values range from 1 to 255.
	 Ping Interval - Enter the interval for the system to execute the PING operation.
	 Ping Retry - Enter the number of times that the system is allowed to execute the PING operation before WAN disconnection is judged.
MTU	Maximum Transmission Unit, the size of the largest packet, in bytes, that can be transmitted to the WAN. The maximum value is 1500. For PPPoE connections, there is always an 8-byte overhead, so the maximum valid MTU value for PPPoE is 1492.
	Path MTU Discovery - Use this feature to determine the optimal MTU size for the WAN.
	Click Detect to open the following dialog.
	● WAN1 Choose IP - Google Chrome ▲ 不安全 192.168.1.1/doc/pathmtu.htm
	Path MTU to: IPv4 Host MTU size start from MTU reduce size by Note: Path MTU discovery will reduce the MTU size for 3 times.
	Accept Cancel
	 Path MTU to - Select Host / IP, for an IPv4 address or Host / IPv6, for an IPv6 address, and then enter the IP address in the textbox.
	MTU size start from - Determine the starting point

value of the packet.

- MTU reduce size by Number of octets by which to decrease the 1500-byte MTU. Start with a 0 value for the reduce size and click the Detect button. If the message Fail is returned, increase the MTU reduce size and try again. Repeat until you see the message Success, indicating that the optimal MTU size has been reached.
- Detect Click it to detect a suitable MTU value.
- Accept After clicking it, the detected value will be displayed in the field of MTU.

PPP/MP Setup

PPP Authentication - The protocol used for PPP authentication.

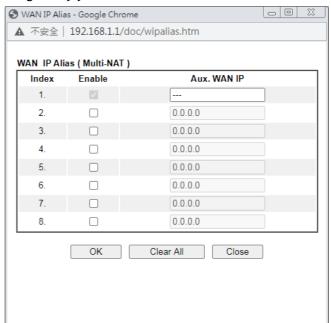

- PAP only Only PAP (Password Authentication Protocol) is used.
- PAP/CHAP/MS-CHAP/MS-VHAPv2 Both PAP and CHAP (Challenge-Handshake Authentication Protocol) can be used for PPP authentication. Router negotiates with the PPTP or L2TP server to determine which protocol to use.

Idle Timeout - Set the timeout for breaking down the Internet after passing through the time without any action.

IP Assignment (IPCP) - Configure the router according to how your ISP allocates WAN IP address(es) to you.

Fixed IP Address - WAN IP address assigned by the ISP.

WAN IP Alias - Click to enter multiple WAN IP addresses assigned by your ISP.

Dial-Out Schedule Setup

Specify up to 4 time schedule entries to enable or disable the WAN. All the schedules can be set previously in Applications >> Schedule web page and you can use the number that you have set in that web page.

 TTL

Change the TTL value - Enable or disable the TTL (Time to Live) for a packet transmitted through Vigor router.

If enabled - TTL value will be reduced (-1) when it passess through Vigor router. It will cause the client,

accessing Internet through Vigor router, be blocked by certain ISP when TTL value becomes "0".

 If disabled - TTL value will not be reduced. Then, when a packet passes through Vigor router, it will not be cancelled. That is, the client who sends out the packet will not be blocked by ISP.

Default MAC Address - Use the default MAC address for the WAN Ethernet port.

Specify a MAC Address - Specify a MAC address for the WAN Ethernet port. Select this option if your ISP authenticates by MAC addresses.

After finishing all the settings here, please click OK to activate them.

II-1-2-2 WAN1 Details Page (Static or Dynamic IP, Physical Mode: Ethernet)

For static IP mode, you usually receive a fixed public IP address or a public subnet, namely multiple public IP addresses from your DSL or Cable ISP service providers. In most cases, a Cable service provider will offer a fixed public IP, while a DSL service provider will offer a public subnet. If you have a public subnet, you could assign an IP address or many IP address to the WAN interface.

To use Static or Dynamic IP as the accessing protocol of the internet, please click the Static or Dynamic IP tab. The following web page will be shown.

WAN 1 **PPPoE** Static or Dynamic IP PPTP/L2TP IPv6 Keep WAN Connection Enable O Disable Enable PING to keep alive IP Network Settings PING to the IP Obtain an IP address automatically PING Interval 0 minute(s) More Options Specify an IP address TTL IP Address Change the TTL value Subnet Mask RIP Routing Gateway IP Address Enable RIP WAN IP Alias MAC Address **DNS Server IP Address** Default MAC Address 8.8.8.8 Primary Server O Use the following MAC Address Secondary Server 8.8.4.4 14:49:BC:0A:8A:BS WAN Connection Detection Mode ARP Detect MTU Path MTU Discovery 1500 OK Cancel

Note:

WAN >> Internet Access

VPN feature may be affected when the value of MTU is changed, please also check your value of VPN mss by using "VPN mss set" command.

We recommend to put the same decreased value on VPN mss. For example, reducing the MTU from 1500 -> 1400, then it will need to reduct 100 from mss value.

Item	Description
Enable/Disable	Enable or disable Static or Dynamic IP access mode.

IP Network Settings

Obtain an IP address automatically - The router receives IP configuration information from a DHCP server.

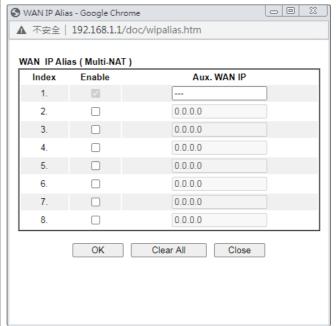

More Options - Click to display more options.

- Router Name Used by some ISPs. Contact your ISP for the appropriate values.
- Domain Name -Used by some ISPs. Contact your ISP for the appropriate values.
- DHCP Client Identifier* Used by some ISPs that authenticates using DHCP Client Identifier (Option 61).
 To enable, tick this box and fill out the Username and Password fields below.

Specify an IP address -Use the IP address, Subnet Mask and Gateway values specified below.

- IP Address -WAN IP address assigned by the ISP.
- Subnet Mask -WAN subnet mask.
- Gateway IP Address IP address of the WAN Gateway.

WAN IP Alias - Click to enter multiple WAN IP addresses assigned by your ISP.

DNS Server IP Address

Primary IP Address - IP address of primary DNS server. Secondary IP Address - IP address of secondary DNS server.

WAN Connection Detection

Configures how the WAN connection is monitored.

Mode - Choose ARP Detect, Ping Detect, Always On or Strict ARP Detect for the system to execute for WAN detection.

- ARP Detect The router broadcasts an ARP request every 5 seconds. If no response is received within 30 seconds, the WAN connection is deemed to have failed.
- Ping Detect The router sends an ICMP (Internet Control Message Protocol) echo request every second to the host, whose address is specified in the Ping IP field, to verify the WAN connection. If the remote host does not respond within 30 seconds, the WAN connection is deemed to have failed.
- Always On- The router assumes the WAN connection is

always active.

If you choose Ping Detect as the detection mode, you have to enter required settings for the following items.

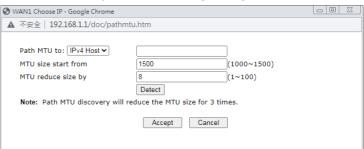

- Primary/Secondary Ping IP Enter Primary or Secondary IP address in this field for pinging.
- Ping Gateway IP Enable this setting to use current WAN gateway IP address for pinging.
- With the IP address(es) pinging, Vigor router can check if the WAN connection is on or off.
- TTL (Time to Live) Time To Live, the maximum allowed number of hops to the ping destination. Valid values range from 1 to 255.
- Ping Interval Enter the interval for the system to execute the PING operation.
- Ping Retry Enter the number of times that the system is allowed to execute the PING operation before WAN disconnection is judged.

MTU

Maximum Transmission Unit, the size of the largest packet, in bytes, that can be transmitted to the WAN. The maximum value is 1500. For PPPoE connections, there is always an 8-byte overhead, so the maximum valid MTU value for PPPoE is 1492.

Path MTU Discovery - Use this feature to determine the optimal MTU size for the WAN.

Click Detect to open the following dialog.

- Path MTU to Select Host / IP, for an IPv4 address or Host / IPv6, for an IPv6 address, and then enter the IP address in the textbox.
- MTU size start from Determine the starting point value of the packet.
- MTU reduce size by Number of octets by which to decrease the 1500-byte MTU. Start with a 0 value for the reduce size and click the Detect button. If the message Fail is returned, increase the MTU reduce size and try again. Repeat until you see the message Success, indicating that the optimal MTU size has been reached.
- Detect Click it to detect a suitable MTU value.
- Accept After clicking it, the detected value will be displayed in the field of MTU.

Keep WAN Connection

Enable PING to keep alive - If selected, ping a WAN host to maintain the connection. If unselected, ping to keep WAN alive is disabled.

PING to the IP - IP address of host to be pinged.

PING Interval - Number of minutes to wait before sending a ping request to the WAN host.

TTL	 Change the TTL value - Enable or disable the TTL (Time to Live) for a packet transmitted through Vigor router. If enabled - TTL value will be reduced (-1) when it passess through Vigor router. It will cause the client, accessing Internet through Vigor router, be blocked by certain ISP when TTL value becomes "0". If disabled - TTL value will not be reduced. Then, when a packet passes through Vigor router, it will not be cancelled. That is, the client who sends out the packet will not be blocked by ISP.
RIP Protocol	Routing Information Protocol is abbreviated as RIP(RFC1058). If selected, the router can exchange routing information with other routers.
MAC Address	Default MAC Address - Use the default MAC address for the WAN Ethernet port. Specify a MAC Address - Specify a MAC address for the WAN Ethernet port. Select this option if your ISP authenticates by MAC addresses.

After finishing all the settings here, please click OK to activate them.

II-1-2-3 WAN1 Details Page (PPTP/L2TP, Physical Mode: Ethernet)

To use PPTP/L2TP as the accessing protocol of the internet, please click the PPTP/L2TP tab. The following web page will be shown.

WAN 1 PPTP/L2TP **PPPoE** Static or Dynamic IP IPv6 PPP Setup ○ Enable PPTP ○ Enable L2TP ● Disable PPP PAP/CHAP/MS-CHAP/MS-CHAPv2 ▼ Server Address Max: 63 characters Authentication Specify Gateway IP Address Idle Timeout second(s) IP Address Assignment Method (IPCP) WAN IP Alias **ISP Access Setup** O Yes O No (Dynamic IP) Fixed IP: Username Fixed IP Password Address WAN IP Network Settings Schedule Profile Obtain an IP address automatically **∨** => None None O Specify an IP address => None **∨** |=> | None IP Address MTU 1460 (Max:1460) Subnet Mask Detect Path MTU Discovery OK Cancel

Note:

WAN >> Internet Access

VPN feature may be affected when the value of MTU is changed, please also check your value of VPN mss by using "VPN mss set" command.

We recommend to put the same decreased value on VPN mss. For example, reducing the MTU from 1500 -> 1400, then it will need to reduct 100 from mss value.

Item	Description
PPTP/L2TP	Enable PPTP- Click this radio button to enable a PPTP client to establish a tunnel to a DSL modem on the WAN interface.
	Enable L2TP - Click this radio button to enable a L2TP client to establish a tunnel to a DSL modem on the WAN interface.
	Disable - Click this radio button to close the connection through PPTP or L2TP.
	Server Address - Specify the IP address of the PPTP/L2TP server if you enable PPTP/L2TP client mode.
	Specify Gateway IP Address - Specify the gateway IP address for the WAN interface.
ISP Access Setup	Username - Username provided by the ISP for PPTP/L2TP authentication.
	Password - Password provided by the ISP for PPTP/L2TP authentication.
	Schedule Profile - Specify up to 4 time schedule entries to enable or disable the WAN. All the schedules can be set previously in Applications >> Schedule web page and you can use the number that you have set in that web page.
MTU	Maximum Transmission Unit, the size of the largest packet, in bytes, that can be transmitted to the WAN. The maximum value is 1460. For PPPoE connections, there is always an 8-byte overhead, so the maximum valid MTU value for PPPoE

is 1492. Path MTU Discovery - Use this feature to determine the optimal MTU size for the WAN. Click Detect to open the following dialog. WAN1 Choose IP - Google Chrome ▲ 不安全 | 192.168.1.1/doc/pathmtu.htm Path MTU to: IPv4 Host ▼ 1500 MTU size start from (1000~1500) MTU reduce size by 8 (1~100) Detect Note: Path MTU discovery will reduce the MTU size for 3 times Accept Cancel Path MTU to - Select Host / IP, for an IPv4 address or Host / IPv6, for an IPv6 address, and then enter the IP address in the textbox. MTU size start from - Determine the starting point value of the packet. MTU reduce size by - Number of octets by which to decrease the 1500-byte MTU. Start with a 0 value for the reduce size and click the Detect button. If the message Fail is returned, increase the MTU reduce size and try again. Repeat until you see the message Success, indicating that the optimal MTU size has been reached. Detect - Click it to detect a suitable MTU value. Accept - After clicking it, the detected value will be displayed in the field of MTU. **PPP Setup** PPP Authentication - The protocol used for PPP authentication. PAP only - Only PAP (Password Authentication Protocol) is used. PAP/CHAP/MS-CHAP/MS-VHAPv2- Both PAP and CHAP (Challenge-Handshake Authentication Protocol) can be used for PPP authentication. Router negotiates with the PPTP or L2TP server to determine which protocol to Idle Timeout - Maximum length of time, in seconds, of idling allowed (no traffic) before the connection is dropped. **IP Address Assignment** Configure the router according to how your ISP allocates Method(IPCP) WAN IP address(es) to you. WAN IP Alias - Configure the router according to how your ISP allocates WAN IP address(es) to you. Fixed IP - Enter a fixed IP address. Yes- ISP has assigned a fixed WAN IP address, which is to be entered below in Fixed IP Address. No-WAN IP address is dynamically allocated. Fixed IP Address - WAN IP address assigned by the ISP.

Obtain an IP address automatically - The router receives IP

Specify an IP address -Use the IP address, Subnet Mask and

configuration information from a DHCP server.

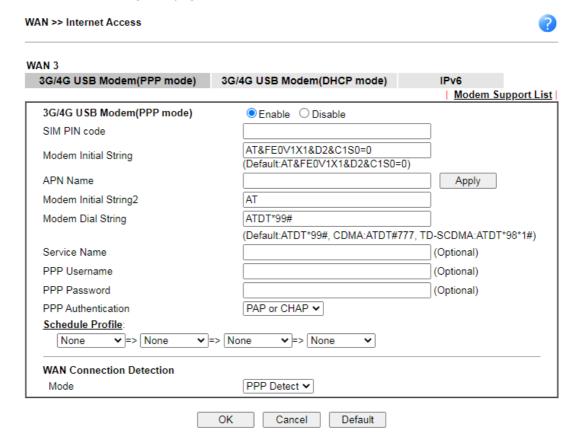

WAN IP Network Settings

Gateway values specified below.	
 IP Address -WAN IP address assigned by the ISP. 	
 Subnet Mask -WAN subnet mask. 	

After finishing all the settings here, please click OK to activate them.

II-1-2-4 WAN3 Details Page (PPP mode, Physical Mode: USB)

To use 3G/4G USB Modem (PPP mode) as the accessing protocol of the internet, please choose Internet Access from WAN menu. Then, select 3G/4G USB Modem (PPP mode) for WAN3. The following web page will be shown.

Item	Description				
Modem Support List	It lists all of the modems supported by such router.

	BandRich	Bandluxe C330	8	Y	
	BandRich	Bandluxe C331	&	Y	
	BandRich	Bandluxe C502	⊗	Y	-
3G /4G USB Modem (PPP mode)	Enable or disable 3G /4G USB Modem (PPP mode) access mode.				
SIM PIN code	Enter PIN code of the SIM card that will be used to access Internet.				
	The maximum length of the PIN code you can set is 15 characters.				

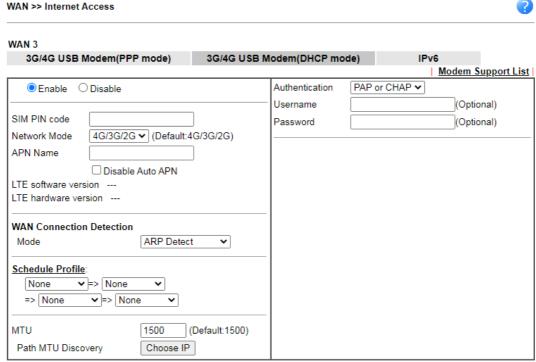

Modem Initial String	Such value is used to initialize USB modem. Please use the default value. If you have any question, please contact to your ISP.
	The maximum length of the string you can set is 47 characters.
APN Name	APN means Access Point Name which is provided and required by some ISPs. Enter the name and click Apply. The maximum length of the name you can set is 43 characters.
Modem Initial String2	The initial string 1 is shared with APN. In some cases, user may need another initial AT command to restrict 3G band or do any special settings. The maximum length of the string you can set is 47 characters.
Modem Dial String	Such value is used to dial through USB mode. Please use the default value. If you have any question, please contact to your ISP.
	The maximum length of the string you can set is 31 characters.
Service Name	Enter the description of the specific network service.
PPP Username	Enter the PPP username (optional). The maximum length of the name you can set is 63 characters.
PPP Password	Enter the PPP password (optional). The maximum length of the password you can set is 62 characters.
PPP Authentication	 The protocol used for PPP authentication. PAP only - Only PAP (Password Authentication Protocol) is used. PAP or CHAP - Both PAP and CHAP (Challenge-Handshake Authentication Protocol) can be used for PPP authentication. Router negotiates with the PPTP or L2TP server to determine which protocol to use.
Schedule Profile	Specify up to 4 time schedule entries to enable or disable the WAN. All the schedules can be set previously in Applications >> Schedule web page and you can use the number that you have set in that web page.
WAN Connection Detection	Configures how the WAN connection is monitored. Mode - Choose PPP Detect or Ping Detect for the system to execute for WAN detection. PPP Detect - The router broadcasts an PPP request every 5 seconds. If no response is received within 30 seconds, the WAN connection is deemed to have failed. Ping Detect - The router sends an ICMP (Internet Control Message Protocol) echo request every second to the host, whose address is specified in the Ping IP field, to verify the WAN connection. If the remote host does not respond within 30 seconds, the WAN connection is deemed to have failed. If you choose Ping Detect as the detection mode, you have to enter required settings for the following items. Primary/Secondary Ping IP - Enter Primary or Secondary IP address in this field for pinging. TTL (Time to Live) -Time To Live, the maximum allowed number of hops to the ping destination. Valid values

range from 1 to 255. Ping Interval - Enter the interval for the system to execute the PING operation.
 Ping Retry - Enter the number of times that the system is allowed to execute the PING operation before WAN disconnection is judged.

After finishing all the settings here, please click OK to activate them.

II-1-2-5 WAN3 Details Page (DHCP mode, Physical Mode: USB)

To use 3G/4G USB Modem (DHCP mode) as the accessing protocol of the internet, please choose Internet Access from WAN menu. Then, select 3G/4G USB Modem (DHCP mode) for WAN3. The following web page will be shown.

Note:

- 1. Please note that in some case USB port connection will be terminated temporarily to activate the new configuration.
- 2.VPN feature may be affected when the value of MTU is changed, please also check your value of VPN mss by using "VPN mss set" command.

We recommend to put the same decreased value on VPN mss. For example, reducing the MTU from 1500 -> 1400, then it will need to reduct 100 from mss value.

PAP only - Only PAP (Password Authentication Protocol) is used. PAP or CHAP - Both PAP and CHAP (Challenge-Handshake Authentication Protocol) can be used for PPP authentication. Router negotiates with the PPTP or L2TP server to determine which protocol to Username -Username provided by the ISP for authentication (optional). Password -Password provided by the ISP for authentication (optional).

After finishing all the settings here, please click OK to activate them.

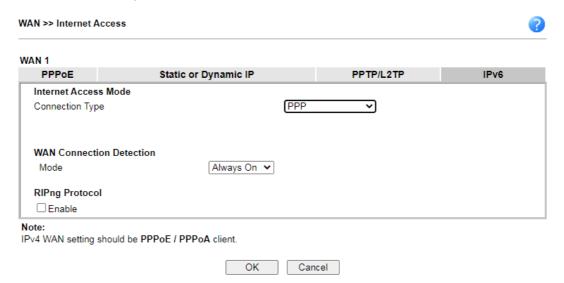

II-1-2-6 WAN1/WAN3 Details Page for IPv6 - Offline

When Offline is selected, the IPv6 connection will be disabled.

II-1-2-7 WAN1 Details Page for IPv6 – PPP

IPv6 WAN address is assigned along with the IPv4 WAN address during PPPoE negotiation. This IPv6 access mode requires that the IPv4 uses PPPoE.

Item	Description	
WAN Connection Detection	Configures how the WAN connection is monitored. Mode - Choose Ping Detect or Always On for the system to execute for the WAN detection.	
	 Ping Detect - The router sends an ICMP (Internet Control Message Protocol) echo request every second to the host, whose address is specified in the Ping IP field, to verify the WAN connection. If the remote host does not respond within 30 seconds, the WAN connection is deemed to have failed. 	
	 Always On - The router assumes the WAN connection is always active. 	
	If you choose Ping Detect as the detection mode, you have to enter required settings for the following items.	

	Ping IP/Hostname - Enter IP address in this field for pinging.
	TTL (Time to Live) - Time To Live, the maximum allowed number of hops to the ping destination. Valid values range from 1 to 255.
RIPng Protocol	RIPng (RIP next generation) offers the same functions and benefits as IPv4 RIP v2.

Below shows an example for successful IPv6 connection based on PPP mode.

Online Status

Info

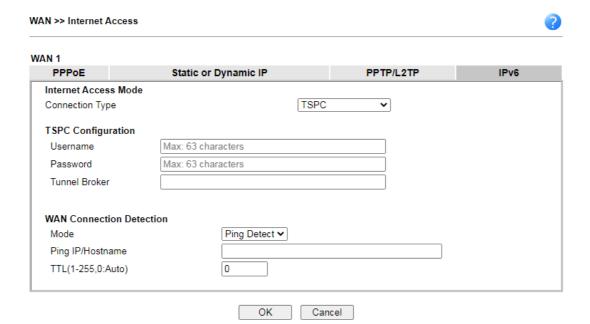

At present, the IPv6 prefix can be acquired via the PPPoE mode connection which is available for the areas such as Taiwan (hinet), the Netherlands, Australia and UK.

II-1-2-8 WAN1/WAN3 Details Page for IPv6 - TSPC

Tunnel setup protocol client (TSPC) is an application which could help you to connect to IPv6 network easily.

Please make sure your IPv4 WAN connection is OK and apply one free account from hexago (http://gogonet.gogo6.com/page/freenet6-account) before you try to use TSPC for network connection. TSPC would connect to tunnel broker and requests a tunnel according to the specifications inside the configuration file. It gets a public IPv6 IP address and an IPv6 prefix from the tunnel broker and then monitors the state of the tunnel in background.

After getting the IPv6 prefix and starting router advertisement daemon (RADVD), the PC behind this router can directly connect to IPv6 the Internet.

Available settings are explained as follows:

Item	Description
Username	It is suggested for you to apply another username and password for http://gogonet.gogo6.com/page/freenet6-account.
Password	Enter the password assigned with the user name.
Tunnel Broker	Enter the address for the tunnel broker IP, FQDN or an optional port number.
WAN Connection Detection	Configures how the WAN connection is monitored. Mode - Choose Ping Detect or Always On for the system to execute for the WAN detection.
	 Ping Detect - The router sends an ICMP (Internet Control Message Protocol) echo request every second to the host, whose address is specified in the Ping IP field, to verify the WAN connection. If the remote host does not respond within 30 seconds, the WAN connection is deemed to have failed.
	 Always On - The router assumes the WAN connection is always active.
	If you choose Ping Detect as the detection mode, you have to enter required settings for the following items.
	 Ping IP/Hostname - Enter IP address in this field for pinging.
	 TTL (Time to Live) - Time To Live, the maximum allowed number of hops to the ping destination. Valid values range from 1 to 255.

After finished the above settings, click OK to save the settings.

II-1-2-9 WAN1/WAN3 Details Page for IPv6 - AICCU

N 1	84-4:	- B IB		DD TD // ATD	15
PPPoE		r Dynamic IP		PPTP/L2TP	IPv6
Internet Access Mo	de				
Connection Type			AICCU	~	
AICCU Configuratio	n				
☐ Always On					
Username	Max: 63 chara	cters			
Password	Max: 63 chara	cters			
Tunnel Broker	tic.sixxs.net				
Tunnel ID					
Subnet Prefix				1	
WAN Connection De	etection				
Mode		Ping Detect ➤			
Ping IP/Hostname					
TTL(1-255,0:Auto)		0			

Cancel

Item	Description
Always On	If selected, always attempt to reconnect if connection is lost.
	If unselected, reconnect up to 3 times if connection is lost.
Username	Login Username.
	Enter the name obtained from the broker. Please apply new account at http://www.sixxs.net/. It is suggested for you to apply another username and password.
Password	Login Password.
	Enter the password.
Tunnel Broker	Address of the tunnel broker. The server can provide IPv6 tunnels to sites or end users over IPv4.
	Enter the address for the tunnel broker IP, FQDN or an optional port number.
Tunnel ID	One user account may have several tunnels. And, each tunnel shall have one specified tunnel ID (e.g., T115394).
	Enter the ID offered by Tunnel Broker.
Subnet Prefix	Enter the subnet prefix address obtained from service provider.
	The maximum length of the prefix you can set is 128 characters.
WAN Connection	Configures how the WAN connection is monitored.
Detection	Mode - Choose Ping Detect or Always On for the system to execute for the WAN detection.

- Ping Detect The router sends an ICMP (Internet Control Message Protocol) echo request every second to the host, whose address is specified in the Ping IP field, to verify the WAN connection. If the remote host does not respond within 30 seconds, the WAN connection is deemed to have failed.
- Always On The router assumes the WAN connection is always active.

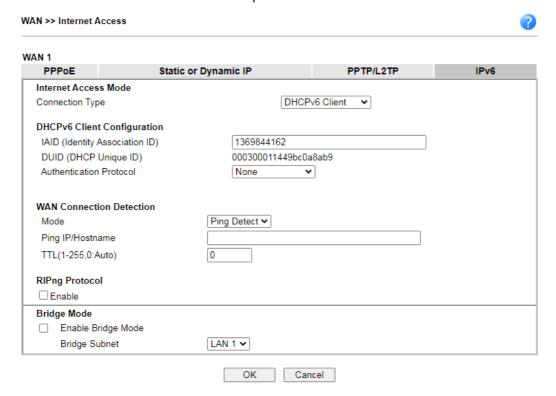

If you choose Ping Detect as the detection mode, you have to enter required settings for the following items.

- Ping IP/Hostname Enter an IP address in this field for pinging.
- TTL (Time to Live) Time To Live, the maximum allowed number of hops to the ping destination. Valid values range from 1 to 255.

After finished the above settings, click OK to save the settings.

II-1-2-10 WAN1 Details Page for IPv6 - DHCPv6 Client

DHCPv6 client mode would use DHCPv6 protocol to obtain IPv6 address from server.

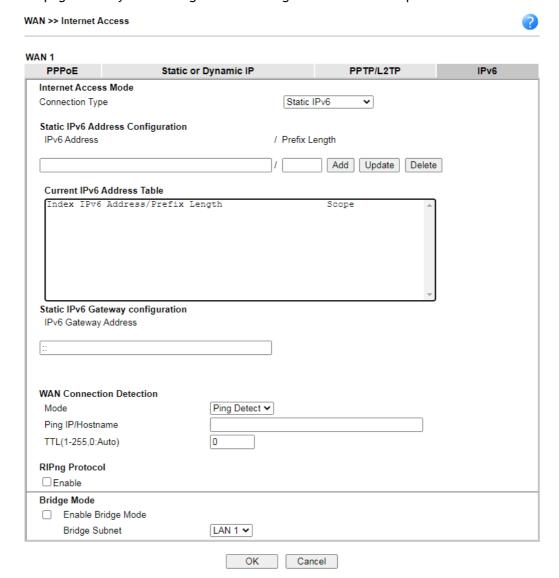

Item	Description
DHCPv6 Client Configuration	IAID - Unique integer that identifies this WAN interface. DUID - Display the DHCP unique ID used by this WAN interface.
	Authentication Protocol - This protocol will be used for the client to be authenticated by DHCPv6 server before accessing into Internet. There are three types can be specified, Reconfigure Key, Delayed and None. In general,

	the default cetting is None
	the default setting is None.Reconfigure Key - During the connection process,
	DHCPv6 server will authenticate the client automatically.
	Delayed - During the connection process, DHCPv6 server will authenticate and identify the client based on the key ID, realm and secret information specified in these fields.
	 Key ID - Type a value (range from 1 to 65535) which will be used to generate HMAC-MD5 value.
	 Realm - The name (1 to 31 characters) typed here will identify the key which generates HMAC-MD5 value.
	 Secret - Type a text (1 to 31 characters) as s a unique identifier for each client on each DHCP server.
WAN Connection	Configures how the WAN connection is monitored.
Detection	Mode - Choose Always On, Ping Detect or NS Detect for the system to execute for WAN detection.
	 Ping Detect - The router sends an ICMP (Internet Control Message Protocol) echo request every second to the host, whose address is specified in the Ping IP field, to verify the WAN connection. If the remote host does not respond within 30 seconds, the WAN connection is deemed to have failed.
	• Always On - The router assumes the WAN connection is always active.
	NS Detect - The router verifies connectivity by issuing Neighbor Solicitation packets.
	If you choose Ping Detect as the detection mode, you have to enter required settings for the following items.
	Ping IP/Hostname - Enter an IP address in this field for pinging.
	TTL (Time to Live) -Time To Live, the maximum allowed number of hops to the ping destination. Valid values range from 1 to 255.
RIPng Protocol	RIPng (RIP next generation) offers the same functions and benefits as IPv4 RIP v2.
Bridge Mode	Enable Bridge Mode - If selected, the router will bridge the WAN connection to a LAN group.
	Enable Firewall - It is available when Bridge Mode is enabled. When both Bridge Mode and Firewall check boxes are enabled, the settings configured (user profiles) under User Management will be ignored. And all of the filter rules defined and enabled in Firewall menu will be activated. Bridge Subnet - LAN subnet to be bridged.

After finished the above settings, click OK to save the settings.

II-1-2-11 WAN1 Details Page for IPv6 - Static IPv6

This page allows you to configure an ISP-assigned static IPv6 setup.

Item	Description
Static IPv6 Address	IPv6 Address - WAN IPv6 address assigned by the ISP.
Configuration	Prefix Length - Length of the IPv6 prefix.
	Add - Click this button to add the values in the IPv6 Address and Prefix Length fields to the IPv6 address table.
	Update - Click it to modify an existed entry.
	Delete - To remove an IPv6 address, select it by clicking on the entry in the Current IPv6 Address Table, then click the Delete button.
Current IPv6 Address Table	Display current interface IPv6 address.
Static IPv6 Gateway Configuration	IPv6 Gateway Address - IPv6 address of the ISP gateway.
WAN Connection	Configures how the WAN connection is monitored.

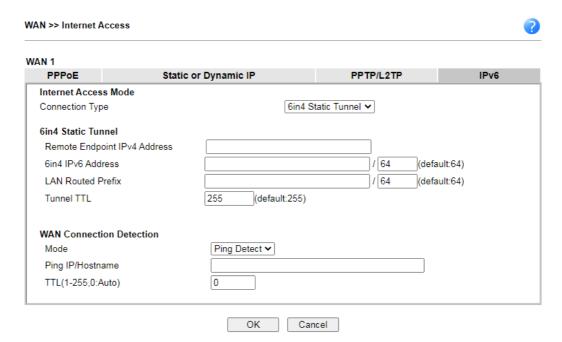

Detection	Mode - Choose Always On, Ping Detect or NS Detect for the system to execute for WAN detection.
	 Ping Detect - The router sends an ICMP (Internet Control Message Protocol) echo request every second to the host, whose address is specified in the Ping IP field, to verify the WAN connection. If the remote host does not respond within 30 seconds, the WAN connection is deemed to have failed.
	 Always On - The router assumes the WAN connection is always active. NS Detect - The router verifies connectivity by issuing Neighbor Solicitation packets.
	If you choose Ping Detect as the detection mode, you have to enter required settings for the following items.
	Ping IP/Hostname - Enter an IP address in this field for pinging.
	 TTL (Time to Live) -Time To Live, the maximum allowed number of hops to the ping destination. Valid values range from 1 to 255.
RIPng Protocol	RIPng (RIP next generation) offers the same functions and benefits as IPv4 RIP v2.
Bridge Mode	Enable Bridge Mode - If selected, the router will bridge the WAN connection to a LAN group.
	Enable Firewall - It is available when Bridge Mode is enabled. When both Bridge Mode and Firewall check boxes are enabled, the settings configured (user profiles) under User Management will be ignored. And all of the filter rules defined and enabled in Firewall menu will be activated. Bridge Subnet - LAN subnet to be bridged.

After finished the above settings, click OK to save the settings.

II-1-2-12 WAN1 Details Page for IPv6 – 6in4 Static Tunnel

This page allows you to setup 6in4 Static Tunnel for WAN interface.

However, 6in4 offers a prefix outside of 2002::0/16. So, you can use a fixed endpoint rather than anycast endpoint. The mode has more reliability.

Available settings are explained as follows:

Item	Description
6in4 Static Tunnel	Remote Endpoint IPv4 Address - WAN IPv6 address assigned by the tunnel provider.
	6in4 IPv6 Address - WAN IPv6 address and prefix length assigned by the tunnel provider.
	LAN Routed Prefix - LAN IPv6 address prefix and prefix length.
	Tunnel TTL - Time to live value, which is the maximum number of hops allowed to the endpoint.
WAN Connection	Configures how the WAN connection is monitored.
Detection	Mode - Choose Always On or Ping Detect for the system to execute for WAN detection.
	 Ping Detect - The router sends an ICMP (Internet Control Message Protocol) echo request every second to the host, whose address is specified in the Ping IP field, to verify the WAN connection. If the remote host does not respond within 30 seconds, the WAN connection is deemed to have failed.
	 Always On - The router assumes the WAN connection is always active.
	If you choose Ping Detect as the detection mode, you have to enter required settings for the following items.
	 Ping IP/Hostname - Enter an IP address in this field for pinging.
	 TTL (Time to Live) -Time To Live, the maximum allowed number of hops to the ping destination. Valid values range from 1 to 255.

After finished the above settings, click OK to save the settings.

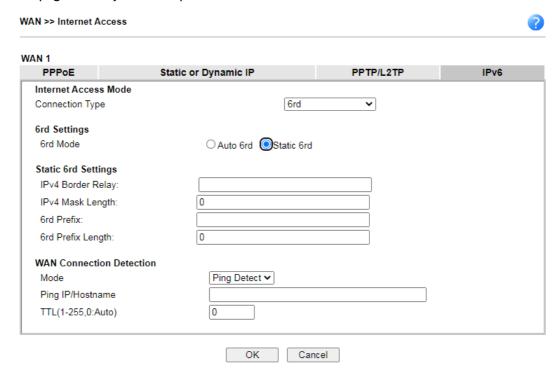

Below shows an example for successful IPv6 connection based on 6in4 Static Tunnel mode.

Online Status

II-1-2-13 WAN1 Details Page for IPv6 - 6rd

This page allows you to setup 6rd for WAN interface.

Item	Description
6rd Mode	Auto 6rd - Used in conjunction with DHCPv4, the router automatically provisions IPv6 using option 212.
	Static 6rd - IPv6 configuration information is manually entered.
IPv4 Border Relay	Enter the IPv4 addresses of the 6rd Border Relay for a given 6rd domain.
IPv4 Mask Length	Number of high-order bits that are identical in the IPv4 addresses within the 6rd domain. These bits are excluded when constructing the 6rd delegated prefix.
	It may be any value between 0 and 32.
6rd Prefix	Enter the 6rd IPv6 address.
6rd Prefix Length	Enter the IPv6 prefix length for the 6rd IPv6 prefix in number of bits.
WAN Connection Detection	Configures how the WAN connection is monitored. Mode - Choose Always On or Ping Detect for the system to execute for WAN detection.
	 Ping Detect - The router sends an ICMP (Internet Control Message Protocol) echo request every second to the host, whose address is specified in the Ping IP field, to verify the WAN connection. If the remote host does not respond within 30 seconds, the WAN connection is deemed to have failed.
	 Always On - The router assumes the WAN connection is always active.

If you choose Ping Detect as the detection mode, you have to enter required settings for the following items.

- Ping IP/Hostname Enter an IP address in this field for pinging.
- TTL (Time to Live) -Time To Live, the maximum allowed number of hops to the ping destination. Valid values range from 1 to 255.

After finished the above settings, click OK to save the settings.

Below shows an example for successful IPv6 connection based on 6rd mode.

II-1-3 Multi-VLAN

Multi-VLAN allows users to create profiles for specific WAN interface and bridge connections for user applications that require very high network throughput.

This page shows the basic configurations used by every channel.

Note:

- 1. Greyed out or hidden WANs are reserved.
- 2. Ports configured for bridge mode cannot be selected in LAN >> VLAN Configuration.

Available settings are explained as follows:

Item	Description
Channel	Display the number of each channel.
	Channels 1 is used by the Internet Access web user interface and can not be configured here.
	Channels 4 ~ 10 are configurable.
Enable	Display whether the settings in this channel are enabled (Yes) or not (No).
WAN Type	Displays the physical medium that the channel will use.
VLAN Tag	Displays the VLAN tag value that will be used for the packets traveling on this channel.
Port-based Bridge	The network traffic flowing on each channel will be identified by the system via their VLAN Tags. Channels using the same WAN type may not configure the same VLAN tag value.
	Enable - Check this box to enable the port-based bridge function on this channel.
	P1 ~ P4 - Check the box(es) to build bridge connection on LAN.

To configure a channel, click its channel number.

WAN links for Channel 4-6 are provided for router-borne application such as TR-069. The settings must be applied and obtained from your ISP. For your special request, please contact with your ISP and then click WAN link of Channel 4-6 to configure your router.

Item	Description
Enable Channel 4~6	Enable - Select to enable this channel.
	Disable - Select to disable this channel.
General Settings	VLAN Tag - Enter the value as the VLAN ID number. Valid settings are in the range from 1 to 4095. The network traffic flowing on each channel will be identified by the system via their VLAN Tags. Channels using the same WAN type may not configure the same VLAN tag value. Priority - Choose the number to determine the packet priority for such VLAN. The range is from 0 to 7.
Open Port-based Bridge Connection for this Channel	If selected, bridge this channel to one or more LAN ports. Physical Members - If selected, a channel is bridged to this LAN port. Note: LAN port P1 is reserved for NAT use and cannot be selected for bridging.

Open WAN Interface for this Channel

If selected, NAT (Network Address Translation) will be applied to this channel to create a virtual WAN. The virtual WAN carries the same number as the channel itself.

WAN Application - The intended usage of this channel.

- Management The router can be managed using the web-based configuration, telnet and TR-069 via this channel.
- IPTV IGMP packets can be sent to IPTV servers on this channel.

WAN Setup - The WAN access method of this channel. Available options are PPPoE/PPPoA and Static or Dynamic IP.

- PPPoE/PPPoA When PPPoE/PPPoA is selected, the ISP Access Setup and IP Address From ISP settings are available for configuration, and will be used to establish the WAN connection.
- Static or Dynamic IP When Static or Dynamic IP is selected, the WAN IP Network Settings and DNS Server IP Address settings are available for configuration, and will be used to establish the WAN connection.

ISP Access Setup

Enter your allocated username, password and authentication parameters according to the information provided by your ISP.

ISP Name - PPP Service Name. Enter if your ISP requires this setting; otherwise leave blank.

Username - Name provided by the ISP for PPPoE/PPPoA authentication. Maximum length is 62 characters.

Password - Password provided by the ISP for PPPoE/PPPoA authentication. Maximum length is 62 characters.

PPP Authentication -The protocol used for PPP authentication.

- PAP only- Only PAP (Password Authentication Protocol) is used.
- PAP or CHAP- Both PAP and CHAP (Challenge-Handshake Authentication Protocol) can be used for PPP authentication. Router negotiates with the PPTP or L2TP server to determine which protocol to use.

Always On - If selected, the router will maintain the PPPoE/PPPoA connection.

Idle Timeout - Maximum length of time, in seconds, of idling allowed (no traffic) before the connection is dropped.

IP Address from ISP - Specifies how the WAN IP address of the channel configured.

Fixed IP

Yes - IP address entered in the Fixed IP Address field will be used as the IP address of the virtual WAN.

No - Virtual WAN IP address will be assigned by the ISP's PPPoE/PPPoA server.

WAN IP Network Settings

Obtain an IP address automatically - Select this option if the router is to receive IP configuration information from a DHCP server.

- Router Name Sets the value of DHCP Option 12, which is used by some ISPs.
- Domain Name Sets the value of DHCP Option 15, which is used by some ISPs.

Specify an IP address - Select this option to manually enter the IP address.

- IP Address Enter the IP address.
- Subnet Mask Enter the subnet mask.
- Gateway IP Address Enter gateway IP address.

DNS Server IP Address - Enter the primary IP address for the router if you want to use Static IP mode. If necessary, Enter secondary IP address for necessity in the future.

After finished the above settings, click OK to save the settings and return to previous page.

Click any index (7~10) to get the following web page:

WAN >> Multi-VLAN >> Channel 7

General Settings		
VLAN Header		
VLAN Tag:	0	
Priority:	0 🗸	
	nust be set between 1~4095 and unique for each channel. hannel can be untagged (equal to 0) at a time.	
Bridge mode		
□Enable		
Physical Member	s	
□P1 □P2 □]P3 □P4	
	or NAT use,and cannot be configured for bridge mode. Infigured for bridge mode, the setting of the port in LAN >> VLAN Ill not work.	

Available settings are explained as follows:

Item	Description
Enable Channel 7~10	Enable - Select to enable this channel. Disable - Select to disable this channel.
General Settings	VLAN Tag - Enter the value as the VLAN ID number. Valid settings are in the range from 1 to 4095. The network traffic flowing on each channel will be identified by the system via their VLAN Tags. Channels using the same WAN type may not configure the same VLAN tag value. Priority - Choose the number to determine the packet priority for such VLAN. The range is from 0 to 7.
Bridge mode	If selected, bridge this channel to one or more LAN ports. Physical Members- If selected, a channel is bridged to this LAN port. Note: LAN port P1 is reserved for NAT use and cannot be selected for bridging.

After finished the above settings, click OK to save the settings.

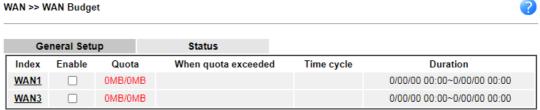

II-1-4 WAN Budget

This function is used to determine the data *traffic volume* for each WAN interface respectively to prevent overcharges for data transmission by the ISP. Please note that the Quota Limit and Billing cycle day of month settings will need to be configured correctly first in order for some period calculations to be performed correctly.

The WAN Budget feature allows you to conveniently keep track of Internet traffic volume. You can:

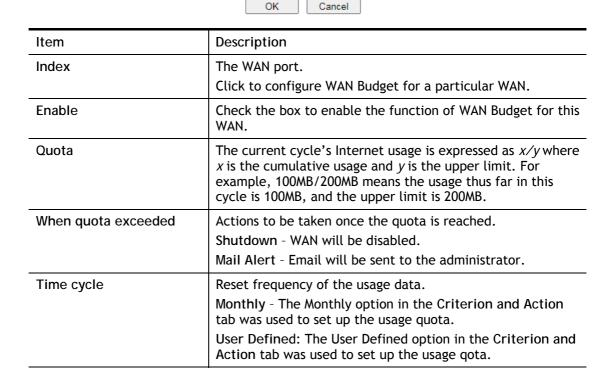

- set up calendar cycles to monitor;
- limit your Internet usage according to your ISP's quota;
- set up action(s) to take when the quota is exceeded.

II-1-4-1 General Setup

Note:

- The budget traffic information provided here is for reference only, please consult your ISP for the actual traffic usage and charges.
- When hardware acceleration function is used, the monitored WAN traffic of Ethernet WAN interfaces may be slightly inaccurate.

Start and end timestamps of the current cycle.

Click WAN# link to open the following web page.

Duration

WAN 1

Quota Limit:	0		MB 🕶	
Vhen quota exceeded :	Shutdow	n WAN interface		
	Using Notifi	cation Object [-	v	
	Set Mail Ale	rt or SMS messa	<u>ige</u> .	
Monthly	Custom			
Select the day of a month whe	en your (cellular) data rese	ets.		

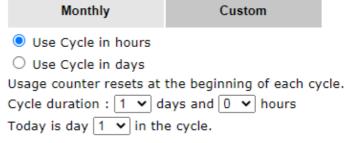

- Please make sure the <u>Time and Date</u> of the router is configured.
 SMS message and mail will be sent when the usage reaches 95% and 100% of quota.

Item	Description		
Enable	When selected, WAN Budget is enabled for this WAN.		
Quota Limit	Enter the data traffic quota allowed for such WAN interface. There are two unit (MB and GB) offered for you to specify.		
When quota exceeded	Check the box(es) as the condition(s) for the system to perform when the traffic has exceeded the budget limit. Shutdown WAN interface - All the outgoing traffic through		
	such WAN interface will be terminated.		
	 Using Notification Object - The system will send out a notification based on the content of the notification object. Set Mail Alert - The system will send out a warning message to the administrator when the quota is running out. However, the connection charges will be calculated continuously. Set SMS message - The system will send out SMS message to the administrator when the quota is running out. 		
Monthly	Some ISP might apply for the network limitation based on the traffic limit per month. This setting is to offer a mechanism of resetting the traffic record every month.		
	Monthly	Custom	
	Select the day of a mont	th when your (cellular) data resets.	
	Data quota resets on day 1 🕶 at 00:00 🕶		
	Data quota resets on day You can determine the starting day in one month.		
Custom	This setting allows the user to define the billing cycle according to his request. The WAN budget will be reset with an interval of billing cycle. Monthly is default setting. If long period or a short period is required, use Custom. The period of cycle duration is between 1 day and 60 days. You can determine the cycle		

duration by specifying the days and the hours. In addition, you can specify which day of today is in a cycle.

Use Cycle in hours -

- Cycle duration: Specify the days and hours to reset the traffic record. For example, 7 means the whole cycle is 7 days; 20 means the whole cycle is 20 days. When the time is up, the router will reset the traffic record automatically.
- Today is day Specify the day in the cycle as the starting point which Vigor router will reset the traffic record. For example, "3" means the third day of the cycle duration.

Use Cycle in days -

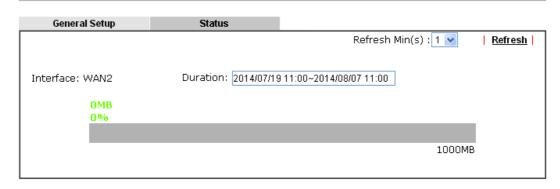

- Cycle duration: Specify the days to reset the traffic record. For example, 7 means the whole cycle is 7 days;
 20 means the whole cycle is 20 days. When the time is up, the router will reset the traffic record automatically.
- Today is day Specify the day and time for data quota rest in the cycle as the starting point which Vigor router will reset the traffic record. For example, "3" means the third day of the cycle duration.

After finished the above settings, click OK to save the settings.

II-1-4-2 Status

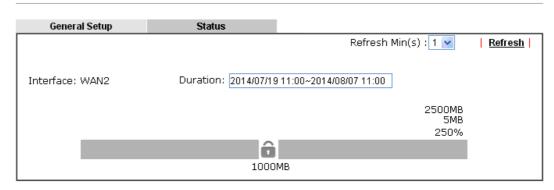

The status page displays the status WAN budget, including the duration and the usage.

WAN >> WAN Budget

If the WAN budget is exhausted, a lock will be displayed on the page if Shutdown WAN interface is selected. Which means no data transmission will be carried out. Moreover, the system will send out a warning message to the administrator if Mail Alert is selected. Or, the system will send out SMS message to the administrator if SMS message is selected.

WAN >> WAN Budget

II-2 LAN

A LAN(Local Area Network) comprises a collection of LAN clients, which are networked devices on your premises. A LAN client can be a computer, a printer, a Voice-over-IP (VoIP) phone, a mobile phone, a gaming console, an Internet Protocol Television (IPTV), etc, and can have either a wired (using Ethernet cabling) or wireless (using Wi-Fi) network connection.

LAN clients within the same LAN are normally able to communicate with one another directly, as they are peers to one another, unless measures, such as firewalls or VLANs, have been put in place to restrict such access. Nowadays the most common LAN firewalls are implemented on the LAN client itself. For example, Microsoft Windows since Windows XP and Apple OS X have built-in firewalls that can be configured to restrict traffic coming in and going out of the computer. VLANs, on the other hand, are usually set up using network switches or routers.

To communicate with the hosts outside of the LAN, LAN clients have to go through a network gateway, which in most cases is a router that sits between the LAN and the ISP network, which is the WAN. The router acts as a director to ensure traffic between the LAN and the WAN reach their intended destinations.

IP Address

On most broadband networks, the ISP assigns a single WAN IP address to the subscriber. All LAN clients have to share this WAN IP address when accessing the Internet. To achieve this, a technique called Network Address Translation (NAT) is used. Under NAT, a private block of IP addresses is assigned to the LAN clients, which communicate with WAN hosts through the router, also known as the gateway.

On outgoing traffic to the WAN, the router makes note that a LAN client has attempted to reach a WAN host, and forwards the request to the intended WAN recipient.

On traffic incoming to the LAN from a WAN host, the router checks its records to see if a matching outstanding request from a LAN client to this WAN host exists, and if so, forwards it to the LAN client. Otherwise, the traffic is dropped.

There are 3 distinct blocks of IPv4 address that are reserved for use as private IP addresses on a LAN.

Name	IP Address Range	Number of Available Addresses	Largest Subnet Mask
24-bit Block	10.0.0.0 to 10.255.255.255	16,777,216	255.0.0.0
20-bit Block	172.16.0.0 to 172.31.255.255	1,048,576	255.240.0.0
16-bit Block	192.168.0.0 to 192.168.255.255	65,536	255.255.0.0

The default beginning IP Address of LAN 1 is 192.168.1.1, and the Subnet Mask is 255.255.255.0, for a total of 254 assignable IP addresses, from 192.168.1.1 to 192.168.1.254. The final IP address of the selected range is reserved for routing and cannot be assigned to a LAN client.

In most cases, the default IP address block should work satisfactorily. However, there are situations where you need to select a different address block, such as when you need to communicate with other LANs that already use the same address block.

Private IP addresses can be assigned automatically to LAN clients using Dynamic Host Configuration Protocol (DHCP), or manually assigned. The DHCP server can either be the router (the most common case), or a separate server, that hands out IP addresses to DHCP clients.

Alternatively, static IP addresses can be manually configured on LAN clients as part of their network settings. No matter how IP addresses are configured, it is important that no two devices get the same IP address. If both DHCP and static assignment are used on a network, it is important to exclude the static IP addresses from the DHCP IP pool. For example, if your LAN uses the 192.168.1.x subnet and you have 20 DHCP clients and 20 static IP clients, you could configure 192.168.1.10 as the Start IP Address, 50 as the IP Pool Counts (enough for the current number of DHCP clients, plus room for future expansion), and use addresses greater than 192.168.1.100 for static assignment.

Web User Interface

To begin configuring the LAN settings, select LAN>>General Settings from the menu bar of the Web UI.

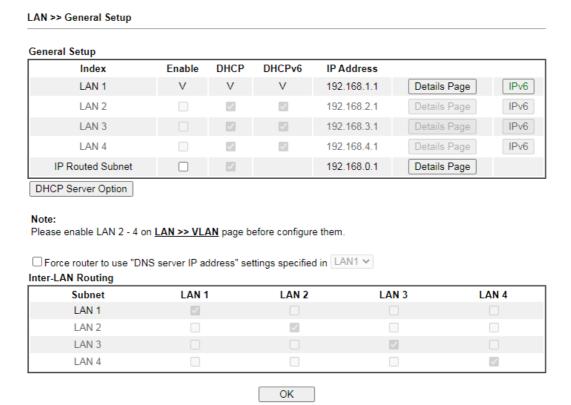

II-2-1 General Setup

This page provides you the general settings for LAN.

There are eight subnets provided by the router which allow users to divide groups into different subnets (LAN1 - LAN4). In addition, different subnets can link for each other by configuring Inter-LAN Routing. At present, LAN1 setting is fixed with NAT mode only. LAN2 - LAN4 can be operated under NAT or Route mode. IP Routed Subnet can be operated under Route mode.

LAN 1 is always enabled and is used as the default subnet. LANs 2 to 4 are subnets to be used in conjunction with Virtual LANs (VLANs). Each VLAN can be configured to allow or disallow communication with other VLANs using the Inter-LAN Routing matrix.

To configure a subnet, select its Details Page button to bring up the LAN Details Page.

Item	Description	
General Setup	Allow to configure settings for each subnet respectively.	
	Index - Display all of the LAN items.	
	Enable- Basically, LAN1 status is enabled in default. LAN2 -LAN4 and IP Routed Subnet can be observed by checking the box of Status.	
	DHCP/DHCPv6- LAN1 is configured with DHCP/DHCPv6 in default. If required, please check the DHCP box for each LAN.	
	IP Address - Display the IP address for each LAN item. Such information is set in default and you can not modify it.	
	Details Page - Click it to access into the setting page. Each LAN will have different LAN configuration page. Each LAN must be configured in different subnet.	
	IPv6 - Click it to access into the settings page of IPv6.	
DHCP Server Option	DHCP packets can be processed by adding option number and data information when such function is enabled.	
	For detailed information, refer to later section.	
Force router to use "DNS server IP address"	Force Vigor router to use DNS servers configured in LAN1/LAN2/LAN3/LAN4 instead of DNS servers given by the Internet Access server (PPPoE, PPTP, L2TP or DHCP server).	
Inter-LAN Routing	Check the box to link two or more different subnets (LAN and LAN).	
	Inter-LAN Routing allows different LAN subnets to be interconnected or isolated.	
	It is only available when the VLAN functionality is enabled. Refer to section II-2-2 VLAN on how to set up VLANs.	
	In the Inter-LAN Routing matrix, a selected checkbox means that the 2 intersecting LANs can communicate with each other.	

When you finish the configuration, please click OK to save and exit this page.

Info

To configure a subnet, select its Detials Page button to bring up the LAN Details Page.

II-2-1-1 Details Page for LAN1 - Ethernet TCP/IP and DHCP Setup

This page has two tabs, LAN Ethernet TCP/IP and DHCP Setup, which sets up the IPv4 LAN environment, and LAN IPv6 Setup, which sets up the IPv6 environment.

LAN >> General Setup

LAN 1 Ethernet TCP / IF	and DHCP Setup	LAN 1 IPv6 Setup	
Network Configuration For NAT Usage IP Address Subnet Mask	192.168.1.1 255.255.255.0 / 24 🔻	DHCP Server Configu Disable Enable Start IP Address IP Pool Counts	Server © Enable Relay Agent 192.168.1.10 200 (max. 253)
RIP Protocol Control	Disable 🕶	Gateway IP Address Lease Time Clear DHCP lease	192.168.1.1 86400 (s) for inactive clients periodically
		DNS Server IP Address Primary IP Address Secondary IP Address	

Mana.	D	
Item	Description	
Network Configuration	For NAT Usage,	
	IP Address - This is the IP address of the router. (Default: 192.168.1.1).	
	Subnet Mask - The subnet mask, together with the IP Address field, indicates the maximum number of clients allowed on the subnet. (Default: 255.255.255.0/ 24).	
	RIP Protocol Control - When Enabled, the router will attempt to exchange routing information with neighbouring routers using the Routing Information Protocol.	
DHCP Server Configuration	DHCP stands for Dynamic Host Configuration Protocol. The router by factory default acts a DHCP server for your network so it automatically dispatches related IP settings to any local user configured as a DHCP client. It is highly recommended that you leave the router enabled as a DHCP server if you do not have a DHCP server for your network.	
	If you want to use another DHCP server in the network other than the Vigor Router's, you can let Relay Agent help you to redirect the DHCP request to the specified location.	
	Disable - Disables the built-in DHCP server on the router.	
	Enable Server - Enables the built-in DHCP server on the router.	
	 Start IP Address - The beginning LAN IP address that is given out to LAN DHCP clients. 	
	 IP Pool Counts - The maximum number of IP addresses to be handed out by DHCP. The default value is 200. Valid range is between 1 and 1021. The actual number of IP addresses available for assignment is the IP Pool Counts, or 1021 minus the last octet of the Start IP Address, whichever is smaller. 	
	 Gateway IP Address - The IP address of the gateway, which is the host on the LAN that relays all traffic 	

coming into and going out of the LAN. The gateway is normally the router, and therefore the Gateway IP Address should be identical to the IP Address in the Network Configuration section above.

- Lease Time The maximum duration DHCP-issued IP addresses can be used before they have to be renewed.
- Clear DHCP lease for inactive clients periodically If selected, the router sends ARP requests recycles IP addresses previously assigned to inactive DHCP clients to prevent exhaustion of the IP address pool.

Note: When Clear DHCP lease for inactive clients periodically is enabled, router will do the following:

- Check activities of DHCP clients by ARP requests every minute when the available DHCP IP addresses are less than 30.
- Clear DHCP lease when the client is not responding ARP replies.

Enable Relay Agent - When selected, all DHCP requests are forwarded to a DHCP server outside of the LAN subnet, and whose address is specified in the DHCP Server IP Address field.

 DHCP Server IP Address - IP Address of the DHCP server to which DHCP requests from LAN clients are forwarded.

DNS Server IP Address

DNS stands for Domain Name System. Every Internet host must have a unique IP address, also they may have a human-friendly, easy to remember name such as www.yahoo.com. The DNS server converts the user-friendly name into its equivalent IP address.

When these fields are populated, they will be used as the IP addresses of the DNS server information in DHCPv6 responses, overriding the ISP-supplied DNS server addresses.

Primary IP Address -You must specify a DNS server IP address here because your ISP should provide you with usually more than one DNS Server.

Secondary IP Address - You can specify secondary DNS server IP address here because your ISP often provides you more than one DNS Server.

The default DNS Server IP address can be found via Online Status:

If both the Primary IP and Secondary IP Address fields are left empty, the router will assign DNS servers obtained from WAN interface to local users as a DNS proxy server and maintain a DNS cache. If there is no DNS servers available, router will use its own IP address instead.

If the IP address of a domain name is already in the DNS cache, the router will resolve the domain name immediately. Otherwise, the router forwards the DNS query packet to the external DNS server by establishing a WAN (e.g. DSL/Cable) connection.

When you finish the configuration, please click OK to save and exit this page.

II-2-1-2 Details Page for LAN2 ~ LAN4

LAN >> General Setup

AN 2 Ethernet TCP / IP Network Configuration	and Dirior Setup	LAN 2 IPv6 Setup	uration
		DHCP Server Configu	
◯ Enable 🔘 Disable		O Disable Enable	Server O Enable Relay Agent
For NAT Usage	O For Routing Usage	Start IP Address	192.168.2.10
IP Address	192.168.2.1	IP Pool Counts	100 (max. 253)
Subnet Mask	255.255.255.0 / 24	Gateway IP Address	192.168.2.1
		Lease Time	259200 (s
		Clear DHCP lease	for inactive clients periodically.
		DNS Server IP Addre	ss
		Primary IP Address	
		Secondary IP Address	

Item	Description	
Network Configuration	Enable/Disable - Click Enable to enable such configuration; click Disable to disable such configuration.	
	For NAT Usage - Click this radio button to invoke NAT function.	
	For Routing Usage - Click this radio button to invoke this function.	
	IP Address - This is the IP address of the router. (Default: 192.168.1.1).	
	Subnet Mask - The subnet mask, together with the IP Address field, indicates the maximum number of clients allowed on the subnet. (Default: 255.255.25.0/ 24).	
DHCP Server Configuration	Disable - Let you manually assign IP address to every host in the LAN.	
	Enable Server - Let the router assign IP address to every host in the LAN.	
	 Start IP Address - The beginning LAN IP address that is given out to LAN DHCP clients. 	
	 IP Pool Counts - The maximum number of IP addresses to be handed out by DHCP. The default value is 100. Valid range is between 1 and 1021. The actual number of IP addresses available for assignment is the IP Pool Counts, or 1021 minus the last octet of the Start IP Address, whichever is smaller. 	
	 Gateway IP Address - The IP address of the gateway, which is the host on the LAN that relays all traffic coming into and going out of the LAN. The gateway is normally the router, and therefore the Gateway IP Address should be identical to the IP Address in the Network Configuration section above. 	
	 Lease Time - The maximum duration DHCP-issued IP addresses can be used before they have to be renewed. 	

 Clear DHCP lease for inactive clients periodically - If selected, the router sends ARP requests recycles IP addresses previously assigned to inactive DHCP clients to prevent exhaustion of the IP address pool.

Note: When Clear DHCP lease for inactive clients periodically is enabled, router will do the following:

- Check activities of DHCP clients by ARP requests every minute when the available DHCP IP addresses are less than 30
- Clear DHCP lease when the client is not responding ARP replies.

Enable Relay Agent - When selected, all DHCP requests are forwarded to a DHCP server outside of the LAN subnet, and whose address is specified in the DHCP Server IP Address field.

 DHCP Server IP Address - It is available when Enable Relay Agent is checked. Set the IP address of the DHCP server you are going to use so the Relay Agent can help to forward the DHCP request to the DHCP server.

DNS Server IP Address

DNS stands for Domain Name System. Every Internet host must have a unique IP address, also they may have a human-friendly, easy to remember name such as www.yahoo.com. The DNS server converts the user-friendly name into its equivalent IP address.

Primary IP Address -You must specify a DNS server IP address here because your ISP should provide you with usually more than one DNS Server.

Secondary IP Address - You can specify secondary DNS server IP address here because your ISP often provides you more than one DNS Server.

The default DNS Server IP address can be found via Online Status:

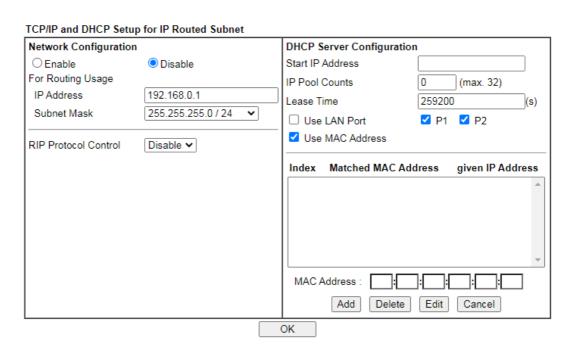

If both the Primary IP and Secondary IP Address fields are left empty, the router will assign its own IP address to local users as a DNS proxy server and maintain a DNS cache.

If the IP address of a domain name is already in the DNS cache, the router will resolve the domain name immediately. Otherwise, the router forwards the DNS query packet to the external DNS server by establishing a WAN (e.g. DSL/Cable) connection.

When you finish the configuration, please click OK to save and exit this page.

II-2-1-3 Details Page for IP Routed Subnet

LAN >> General Setup

Item	Description
Network Configuration	Enable/Disable - Click Enable to enable such configuration; click Disable to disable such configuration.
	For Routing Usage,
	IP Address - This is the IP address of the router. (Default: 192.168.1.1).
	Subnet Mask - The subnet mask, together with the IP Address field, indicates the maximum number of clients allowed on the subnet. (Default: 255.255.255.0/ 24).
	RIP Protocol Control,
	Enable - When Enabled, the router will attempt to exchange routing information with neighbouring routers using the Routing Information Protocol.
DHCP Server Configuration	DHCP stands for Dynamic Host Configuration Protocol. The router by factory default acts a DHCP server for your network so it automatically dispatch related IP settings to any local user configured as a DHCP client. It is highly recommended that you leave the router enabled as a DHCP server if you do not have a DHCP server for your network.
	Start IP Address - Enter a value of the IP address pool for the DHCP server to start with when issuing IP addresses. If the 1st IP address of your router is 192.168.1.1, the starting IP address must be 192.168.1.2 or greater, but smaller than 192.168.1.254.
	IP Pool Counts - Enter the maximum number of PCs that you want the DHCP server to assign IP addresses to. The default is 50 and the maximum is 253.
	Lease Time - Enter the time to determine how long the IP

address assigned by DHCP server can be used.

Use LAN Port - Specify an IP for IP Route Subnet. If it is enabled, DHCP server will assign IP address automatically for the clients coming from P1 and/or P2. Please check the box of P1 and P2.

Use MAC Address - Check such box to specify MAC address.

MAC Address - Enter the MAC Address of the host one by one and click Add to create a list of hosts which can be assigned, deleted or edited from above pool. Set a list of MAC Address for 2nd DHCP server will help router to assign the correct IP address of the correct subnet to the correct host. So those hosts in 2nd subnet won't get an IP address belonging to 1st subnet.

Add - Enter the MAC address in the boxes and click this button to add.

Delete - Click it to delete the selected MAC address.

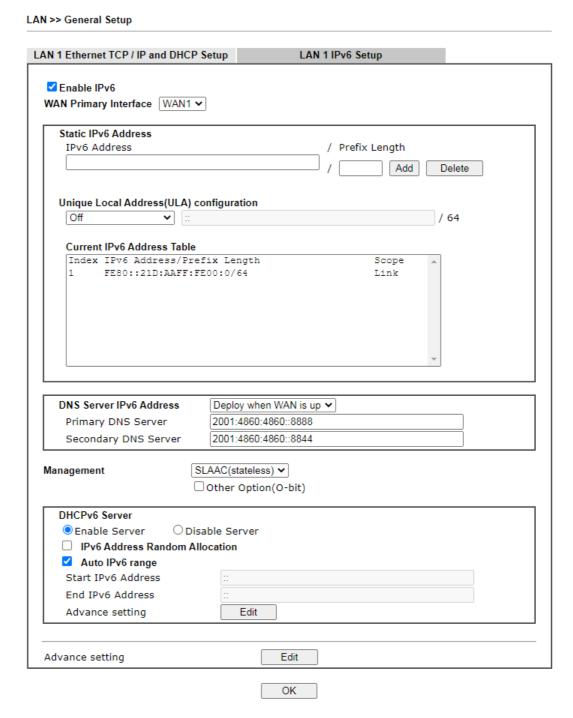

Edit - Click it to edit the selected MAC address.

Cancel - Click it to cancel the job of adding, deleting and editing.

When you finish the configuration, please click OK to save and exit this page.

II-2-1-4 Details Page for LAN IPv6 Setup

There are two configuration pages for LAN1/LAN2/LAN3/LAN4 Port, Ethernet TCP/IP and DHCP Setup (based on IPv4) and IPv6 Setup. Click the tab for each type and refer to the following explanations for detailed information. Below shows the settings page for IPv6.

It provides 2 daemons for LAN side IPv6 address configuration. One is SLAAC(stateless) and the other is DHCPv6 (Stateful) server.

Item	Description
Enable IPv6	Enables or disables IPv6 on the LAN.

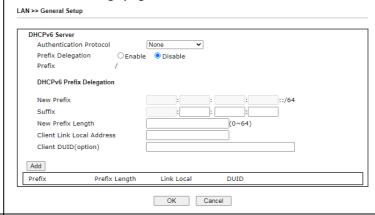

WAN Primary Interface	Select the WAN to be used for IPv6 traffic.
Static IPv6 Address	Enter IPv6 Address and Prefix length to be added, or click an existing IPv6 address to be deleted in the Current IPv6 Address Table below and the values will be automatically copied over.
	IPv6 Address -Type static IPv6 address for LAN.
	Prefix Length - Enter the fixed value for prefix length.
	Add - Click it to add a new entry.
	Delete - Click it to remove an existed entry.
Unique Local Address (ULA) configuration	Unique Local Addresses (ULAs) are private IPv6 addresses assigned to LAN clients.
	Off - ULA is disabled.
	Manually ULA Prefix - LAN clients will be assigned ULAs generated based on the prefix manually entered.
	Auto ULA Prefix - LAN clients will be assigned ULAs using an automatically-determined prefix.
Current IPv6 Address Table	Display current used IPv6 addresses.
DNS Server IPv6 Address	Deploy when WAN is up - The RA (router advertisement) packets will be sent to LAN PC with DNS server information only when network connection by any one of WAN interfaces is up.
	Enable - The RA (router advertisement) packets will be sent to LAN PC with DNS server information no matter WAN connection is up or not.
	 Primary DNS Sever - Enter the IPv6 address for Primary DNS server.
	 Secondary DNS Server -Type another IPv6 address for DNS server if required.
	Disable - DNS server will not be used.
Management	Configures the Managed Address Configuration flag (M-bit) in Route Advertisements.
	 Off - No configuration information is sent using Route Advertisements.
	 SLAAC(stateless) - M-bit is unset.
	 DHCPv6(stateful) - M-bit is set, which indicates to LAN clients that they should acquire all IPv6 configuration information from a DHCPv6 server. The DHCPv6 server can either be the one built into the Vigor2135, or a separate DHCPv6 server.
	Other Option (O-bit) - When selected, the Other Configuration flag is set, which indicates to LAN clients that IPv6 configuration information besides LAN IPv6 addresses is available from a DHCPv6 server.
	Setting the M-bit (see Management above) has the same effect as implicitly setting the O-bit, as DHCPv6 supplies all IPv6 configuration information, including what is indicated as available when the O-bit is set.
DHCPv6 Server	Enable Server -Click it to enable DHCPv6 server. DHCPv6 Server could assign IPv6 address to PC according to the Start/End IPv6 address configuration.
	Disable Server -Click it to disable DHCPv6 server.

IPv6 Address Random Allocation - Check it to assign the DHCPv6 IP address randomly to prevent the attacks from the IPv6 reconnaissance techniques.

Auto IPv6 range - When selected, the router's built-in DHCPv6 server decides the LAN IPv6 address range to be used. When deselected, LAN IPv6 addresses given out will be within the range as specified in the Start IPv6 Address and End IPv6 Address.

 Start IPv6 Address / End IPv6 Address -Enter the start and end address for IPv6 server.

Advance setting - Click the Edit button to bring up the IPv6 Advanced Settings page.

Advance setting

The Advanced Settings page has additional settings for Router Advertisement and enabling multiple WANs for IPv6 traffic.

Router Advertisement Configuration - Click Enable to enable router advertisement server. The router advertisement daemon sends Router Advertisement messages, specified by RFC 2461, to a local Ethernet LAN periodically and when requested by a node sending a Router Solicitation message. These messages are required for IPv6 stateless auto-configuration.

Disable - Click it to disable router advertisement server.

Hop Limt - The value is required for the device behind the router when IPv6 is in use. Default value of hop limit field in Route Advertisement messages.

Min/Max Interval Time (sec) - Minimum/ Maximum time, in seconds, between unsolicited multicast route advertisement messages sent by the RA server.

Default Lifetime (sec) - Time, in seconds, that the router is to be used as the default router.

Default Preference - Default preference value (Low, Medium, High) of the router sent in route advertisement messages.

MTU - It means Max Transmit Unit for packet. If Auto is selected, the router determines the MTU value to send in route advertisement messages.

RIPng Protocol - RIPng (RIP next generation) offers the same functions and benefits as IPv4 RIP v2.

Extension WAN - In addition to the default WAN used for IPv6 traffic specified in the WAN Primary Interface in the LAN IPv6 Setup page, additional WANs can be selected to carry IPv6 traffic by enabling them in the Extension WAN section.

Available WAN - Additional WANs available but not currently selected to carry IPv6 traffic.

Selected WAN - Additional WANs selected to carry IPv6 traffic.

After making changes on the Advance setting page, click the OK button to retain the changes and return to the LAN IPv6 Setup page. Be sure to click OK on the LAN IPv6 Setup page or else changes made on the Advance setting page will not be saved.

II-2-1-5 DHCP Server Options

DHCP Options can be configured by clicking the DHCP Server Option button on the LAN>> General Setup screen.

Enable Interface Option Type Data Enable: All LAN1 LAN2 LAN3 LAN4 IP Routed Subnet Interface:	Enable Interface Option Type Data Enable: All LAN1 LAN2 LAN3 LAN4 IP Routed Subnet Interface:	IPv4	IPv6			Set to Factor

Address List (EX:Option:44, Data:172.16.2.10,172.16.2.20)		Interface: Next Server IP Addr Option Number:	ess/SIAddr:		net	
Data: Max 127 characters		Interface: Next Server IP Addr Option Number: DataType: ASC Hex. Add	ess/SIAddr:	18, Data:/path)		

Note:

- 1. Configuring options 44, 46 or 66 here will overwrite the settings by telnet command msubnet.
- 2. Configuring option 3 here will overwrite the setting in "LAN >> General Setup" Details Page's "Gateway IP Address" field.
- 3. Configuring option 15 here will overwrite the setting in "WAN >> Internet Access >> Static or Dynamic IP" Detail Page's "Domain Name" field.
- 4. Hexadecimal Digit: Input the hexadecimal representation of ASCII Character data. EX: Option:18, Data:2f70617468 (/path)

Available settings are explained as follows:

Item	Description
Customized List	Shows all the DHCP options that have been configured in the system.
Enable	If selected, DHCP option entry is enabled.
	If unselected, DHCP option entry is disabled.
Interface	LAN interface(s) to which this entry is applicable.
Next Server IP Address/SIAddr	Overrides the DHCP Next Server IP address (DHCP Option 66) supplied by the DHCP server.
Option Number	DHCP option number (e.g., 100).
DataType	Type of data in the Data field:
	ASCII Character - A text string. Example: /path.
	Hexadecimal Digit - A hexadecimal string. Valid characters are from 0 to 9 and from a to f. Example: 2f70617468.
	Address List - One or more IPv4 addresses, delimited by commas.
Data	Data of this DHCP option.

To add a DHCP option entry from scratch, clear the data entry fields (Enable, Interface, Option Number, DataType and Data) by clicking Reset. After filling in the values, click Add to create the new entry.

To add a DHCP option entry modeled after an existing entry, click the model entry in Customized List. The data entry fields will be populated with values from the model entry. After making all necessary changes for the new entry, click Add to create it.

To modify an existing DHCP option entry, click on it in Customized List. The data entry fields will be populated with the current values from the entry. After making all necessary changes, click Update to save the changes.

To delete a DHCP option entry, click on it in Customized List, and then click Delete.

II-2-2 VLAN

Virtual Local Area Networks (VLANs) allow you to subdivide your LAN to facilitate management or to improve network security.

Select LAN>>VLAN from the menu bar of the Web UI to bring up the VLAN Configuration page.

Tagged VLAN

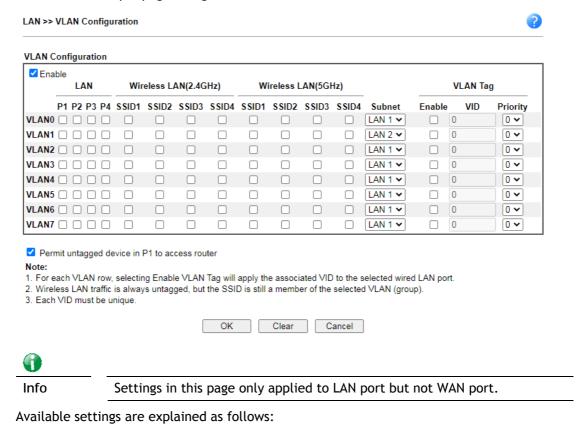

The tagged VLANs (802.1q) can mark data with a VLAN identifier. This identifier can be carried through an onward Ethernet switch to specific ports. The specific VLAN clients can also pick up this identifier as it is just passed to the LAN. You can set the priorities for LAN-side QoS. You can assign each of VLANs to each of the different IP subnets that the router may also be operating, to provide even more isolation. The said functionality is tag-based multi-subnet.

Port-Based VLAN

Relative to tag-based VLAN which groups clients with an identifier, port-based VLAN uses physical ports (P1 ~ P4) to separate the clients into different VLAN group.

Virtual LAN function provides you a very convenient way to manage hosts by grouping them based on the physical port. The multi-subnet can let a small businesses have much better isolation for multi-occupancy applications. Go to LAN page and select VLAN. The following page will appear. Click Enable to invoke VLAN function.

Below is an example page in Vigor2135ac:

Enables or disables VLAN functionality.

Description

Virtual LANs.

Item

Enable

VLANO to VLAN7

LAN	P1 - P4 - Physical Ethernet ports on the router. Select the LAN port(s) to group them under the selected VLAN.
Wireless LAN (2.4GHz)	SSID1 - SSID4 - Select the SSID boxes to group them under the selected VLAN.
Wireless LAN (5GHz)	SSID1 - SSID4 - Select the SSID boxes to group them under the selected VLAN.
Subnet	Select a LAN subnet from LAN 1 to LAN 4 to make the selected VLAN mapping to the specified subnet only.
VLAN Tag	Enable - Select to enable 802.1Q tagging on this VLAN.
	The router will add specific VLAN number to all packets on the LAN while sending them out.
	Please enter the tag value and specify the priority for the packets sending by LAN.
	VID - VLAN Identifier. Valid values are form 0 to 4095. VIDs must be unique.
	Priority - Valid values are from 0 to 7, where 1 has the lowest priority, followed by 0, and finally from 2 to 7 in increasing order of priority.
Permit untagged device in P1 to access router	Select to allow untagged hosts connected to LAN port P1 to access the router. In case you have incorrectly configured VLAN functionality, you will still be able to access the router via the Web UI, and telnet and SSH shells to adjust the configuration.

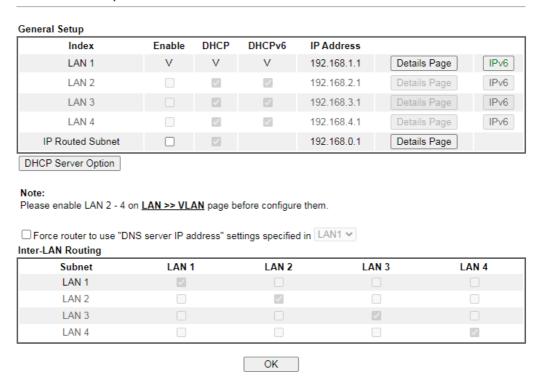

Info

Leave one VLAN untagged at least to prevent from not connecting to Vigor router due to unexpected error. $\,$

Inter-LAN Routing

The Vigor router supports up to 7 VLANs. Each VLAN can be set up to use one or more of the Ethernet ports and wireless LAN Service Set Identifiers (SSIDs). Within the grid of VLANs (horizontal rows) and LAN interfaces (vertical columns),

- all hosts within the same VLAN (horizontal row) are visible to one another
- all hosts connected to the same LAN or WLAN interface (vertical column) are visible to one another if
 - they belong to the same VLAN, or
 - they belong to different VLANs, and inter-LAN routing (LAN>>General Setup) between them is enabled (see below).

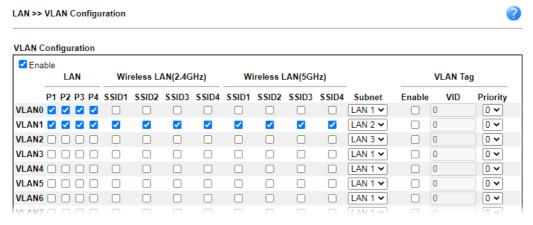

Inter-LAN Routing allows different LAN subnets to be interconnected or isolated. It is only available when the VLAN functionality is enabled. In the Inter-LAN Routing matrix, a selected checkbox means that the 2 intersecting LANs can communicate with each other.

Vigor2135 series features a hugely flexible VLAN system. In its simplest form, each of the Gigabit LAN ports can be isolated from each other, for example to feed different companies or departments but keeping their local traffic completely separated.

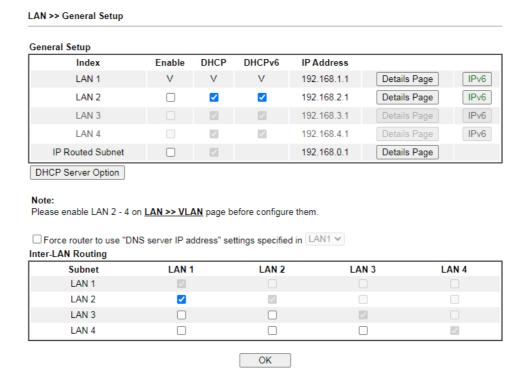

Configuring port-based VLAN for wireless and non-wireless clients

- 1. All the wire network clients are categorized to group VLAN0 in subnet 192.168.1.0/24 (LAN1).
- 2. All the wireless network clients are categorized to group VLAN1 in subnet 192.168.2.0/24 (LAN2).
- 3. Open LAN>>VLAN Configuration. Check the boxes according to the statement in step 1 and Step 2.

Click OK.

5. Open LAN>>General Setup. If you want to let the clients in both groups communicate with each other, simply activate Inter-LAN Routing by checking the box between LAN1 and LAN2.

Vigor router supports up to 4 private IP subnets on LAN. Each can be independent (isolated) or common (able to communicate with each other). This is ideal for departmental or multi-occupancy applications.

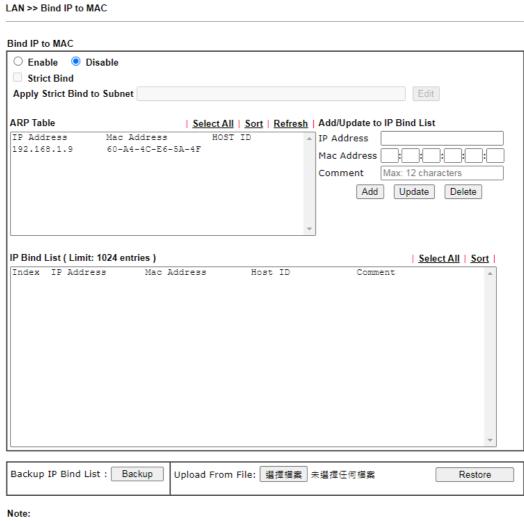

Info

As for the VLAN applications, refer to "Appendix I: VLAN Application on Vigor Router" for more detailed information.

II-2-3 Bind IP to MAC

This function is used to bind the IP and MAC address in LAN to have a strengthening control in network. With the Bind IP to MAC feature you can reserve LAN IP addresses for LAN clients. Each reserved IP address is associated with a Media Access Control (MAC) address.

Click LAN and click Bind IP to MAC to open the setup page.

- 1. IP-MAC binding presets DHCP Allocations.
- 2. If Strict Bind is enabled, unspecified LAN clients in the selected subnets cannot access the Internet.
- 3. Comment can not contain characters " and $\hbox{\rm '.}$

Item	Description
Enable	MAC addresses that have an IP address assigned on this page will receive that IP address through DHCP.
Disable	MAC address-to-IP address bindings configured on this page are ignored by the DHCP server when assigning IP addresses through DHCP.
Strict Bind	LAN clients will be assigned IP addresses according to the MAC-to-IP address associations on this page. LAN client whose MAC address has not been bound to an IP address will

	ha danied network access
	be denied network access. Note: Before selecting Strict Bind, make sure at least one valid MAC address has been bound to an IP address. Otherwise no LAN clients will have network access, and it will not be possible to connect to the router to make changes to its configuration. Apply Strict Bind to Subnet – Select the subnet(s) for applying the rules of Bind IP to MAC.
	Apply Strict Bind to Subnet: Select All Clear All
ARP Table	This table is the LAN ARP table of this router. The information for IP and MAC will be displayed in this field. Each pair of IP and MAC address listed in ARP table can be selected and added to IP Bind List by clicking Add below.
Select All	Select all entries in the ARP Table for manipulation.
Sort	Sort the entries in the ARP Table by IP address.
Refresh	Refresh the screen to reflect the current state of the ARP table.
Add or Update to IP Bind List	IP Address - Enter the IP address to be associated with a MAC address. Mac Address - Enter the MAC address of the LAN client's network interface. Comment - Optional comment field to identify this IP Address - MAC Address pair.
Add	It allows you to add the one you choose from the ARP table or the IP/MAC address typed in Add and Edit to the table of IP Bind List.
Update	It allows you to edit and modify the selected IP address and MAC address that you create before.
Delete	You can remove any item listed in IP Bind List. Simply click and select the one, and click Delete. The selected item will be removed from the IP Bind List.
IP Bind List	It displays a list for the IP bind to MAC information.
Backup IP Bind List	Click Backup and enter a filename to back up IP Bind List to a file.
Upload From File	Click Browse… to select an IP Bind List backup file. Click Restore to restore the backup and overwrite the existing list.

Info

Before you select Strict Bind, you have to bind one set of IP/MAC address for one PC. If not, no one of the PCs can access into Internet. And the web user interface of the router might not be accessed.

When you finish the configuration, click OK to save the settings.

II-2-4 LAN Port Mirror

The LAN Port Mirror function allows network traffic of select LAN ports to be forwarded to another LAN port for analysis. This is useful for enforcing policies, detecting unauthorized access, monitoring network performance, etc.

Select LAN>>LAN Port Mirror from the menu bar of the Web UI to bring up the LAN Port Mirror configuration page.

.AN Port Mirror Port Mirror:					
● Enable ODisable					
	Port1	Port2	Port3	Port4	WAN1
Mirror Port		0	0	0	
Mirrored Tx Port					
Mirrored Rx Port					

Available settings are explained as follows:

Item	Description
Port Mirror	Enables or disables LAN Port Mirroring.
Mirror Port	One and only one port is selected as the mirror port, to which traffic is to be forwarded.
Mirrored Tx Port	Port(s) whose outbound traffic will be forwarded to the mirror port.
Mirrored Rx Port	Port(s) whose inbound traffic will be forwarded to the mirror port.

After finishing all the settings here, please click OK to save the configuration.

II-2-5 Wired 802.1x

Wired 802.1X provides authentication for clients wishing to connect to the LAN by Ethernet. Only one client can be authenticated on each LAN port.

Select LAN>>Wired 802.1X from the menu bar of the Web UI to bring up the Wired 802.1X configuration page.

AN >> Wired 802.1	x			
Wired 802.1X				
LAN 802.1X:				
□Enable				
802.1X ports:				
□ P1	□ P2	□ P3	□ P4	

Available settings are explained as follows:

Item	Description
Enable	Check the box to enable LAN 802.1x function.
802.1X ports	802.1X authentication will be available for the selected LAN ports.

After finishing all the settings here, please click OK to save the configuration.

II-3 Hardware Acceleration

Hardware Acceleration is also called PPA in DrayTek for it is based on Protocol Processing Engine (PPE) of Infineon. It can only support 128 sessions for network traffic (IN & OUT) with implementing three kinds of modes - Disable, Auto and Manual.

II-3-1 Setup

When the data traffic is heavy and data transmission is getting slowly and slowly, you can configure this page to accelerate the data streaming by hardware itself. Open Hardware Acceleration to access into the following page:

Hardware Acceleration >> Setup					
Acceleration: Enable V					
□ NAT					
Protocol: TCP UDP					
Note: Hardware Acceleration does not support PPTP/L2TP.					
OK Clear					

Available settings are explained as follows:

Item	Description
Acceleration	Disable - The default setting. Enable - Choose to enable the hardware acceleration function.

Checking the PPA status

For checking whether the rule of PPA is working or not, a user can login to Vigor2135 series by using telnet. User can view how many sessions are transferring in each direction of PPA table after entering "ppa -v".

II-4 NAT

Most ISPs allocate one WAN IP address to each subscriber. In order to simultaneously connect multiple devices to the Internet, a technique called Network Address Translation is employed.

Usually, the router serves as an NAT (Network Address Translation) router. NAT is a mechanism that one or more private IP addresses can be mapped into a single public one. Public IP address is usually assigned by your ISP, for which you may get charged. Private IP addresses are recognized only among internal hosts.

When the outgoing packets destined to some public server on the Internet reach the NAT router, the router will change its source address into the public IP address of the router, select the available public port, and then forward it. At the same time, the router shall list an entry in a table to memorize this address/port-mapping relationship. When the public server response, the incoming traffic, of course, is destined to the router's public IP address and the router will do the inversion based on its table. Therefore, the internal host can communicate with external host smoothly.

The benefit of the NAT includes:

- Save cost on applying public IP address and apply efficient usage of IP address. NAT
 allows the internal IP addresses of local hosts to be translated into one public IP address,
 thus you can have only one IP address on behalf of the entire internal hosts.
- Enhance security of the internal network by obscuring the IP address. There are
 many attacks aiming victims based on the IP address. Since the attacker cannot be
 aware of any private IP addresses, the NAT function can protect the internal network.

Info

On NAT page, you will see the private IP address defined in RFC-1918. Usually we use the 192.168.1.0/24 subnet for the router. As stated before, the NAT facility can map one or more IP addresses and/or service ports into different specified services. In other words, the NAT function can be achieved by using port mapping methods.

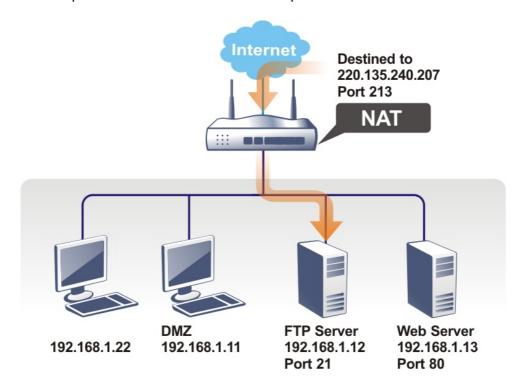

Web User Interface

II-4-1 Port Redirection

Port Redirection is usually set up for server related service inside the local network (LAN), such as web servers, FTP servers, E-mail servers, etc. Most of the case, you need a public IP address for each server and this public IP address/domain name are recognized by all users. Since the server is actually located inside the LAN, the network well protected by NAT of the router, and identified by its private IP address/port, the goal of Port Redirection function is to forward all access request with a public IP address from external users to the mapping private IP address/port of the server.

That is, it allows a range of ports to be mapped to a port across a range of local IP addresses. For example, ports 80 through 89 (a total of 10 ports) can be mapped to port 80 LAN clients 192.168.1.20 through 192.168.1.29 (a total of 10 IP addresses). Henceforth all WAN-to-LAN traffic from ports 80 to 89 will be sent to the respective LAN clients.

The port redirection can only apply to incoming traffic.

To use this function, please go to NAT page and choose Port Redirection web page. The Port Redirection Table provides 40 port-mapping entries for the internal hosts.

NAT >> Port Redirection

Index	Enable	Service Name	WAN Interface	Protocol	Public Port	Source IP	Private IP
<u>1.</u>			All			Any	
<u>2.</u>			All			Any	
<u>3.</u>			All			Any	
<u>4.</u>			All			Any	
<u>5.</u>			All			Any	
<u>39.</u>			All			Any	
<u>40.</u>			All			Any	
OK Cancel							
Backu	p setting	s: Uploa	d From File:	選擇檔案	未選擇任何檔案		
Bac	kup		Restore				

Note

The port number values set in this page might be invalid due to the same values configured for Management Port Setup in System Maintenance Management, Open VPN and SSL VPN.

Each item is explained as follows:

Item	Description
Index	Click to view and edit details of the rule.
Enable	Select to enable the port redirection rule.
Service Name	User-entered name that identifies the rule.
WAN Interface	WAN interface(s) to which this rule applies. A particular WAN interface or ALL interfaces.
Protocol	The protocol to which this rule applies, TCP or UDP.
Public Port	The port or range of WAN ports that is redirected by this rule.
Source IP	The IP object of the source IP.
Private IP	The LAN IP address(es) to which the traffic is redirected.
Backup	Click it to backup the configuration of port redirection settings.
Restore	Click it to restore the configuration of port redirection settings. Before clicking, make sure upload the configuration file onto Vigor router.

Press any number under Index to access into next page for configuring port redirection.

Index No. 1 Enable Mode Single Service Name Protocol WAN Interface Public Port Source IP Private IP Private Port D

Note:

In "Range" Mode the End IP will be calculated automatically once the Public Port and Start IP have been entered.

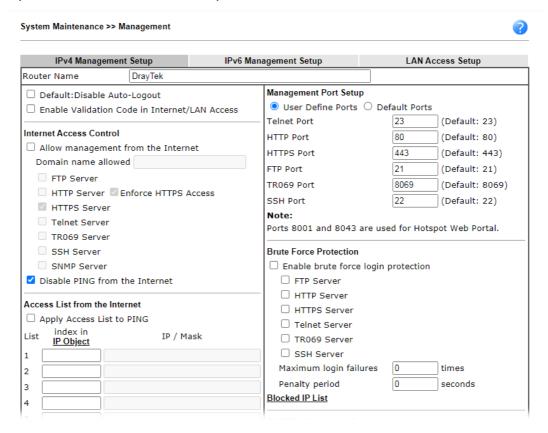

Available settings are explained as follows:

Item	Description
Enable	Select to enable the port redirection setting.
Mode	Allows a single port or a range of ports to be redirected. Single - redirects one single port. Range - redirects a contiguous range of ports.
Service Name	Enter the description of the specific network service.
Protocol	The protocol to which this rule applies, TCP or UDP.
WAN Interface	WAN interface(s) to which this rule applies. WAN # - Traffic from the selected WAN interface will be redirected. ALL - Traffic from all WAN interfaces will be redirected.
Public Port	Specify which port can be redirected to the specified Private IP and Port of the internal host. If you choose Range as the port redirection mode, you will see two boxes on this field. Enter the required number on the first box (as the starting port) and the second box (as the ending port).
Source IP	IP Object - Use the drop down list to specify an IP object profile. IP Group - Use the drop down list to specify an IP group profile.
Private IP	The LAN IP address or range of IP addresses to which the traffic is redirected. In the case of a range, only the beginning IP address needs to be entered. The ending IP address will automatically be derived from the number of public ports.
Private Port	The port on each LAN client to which the traffic will be directed to.

After finishing all the settings here, please click OK to save the configuration.

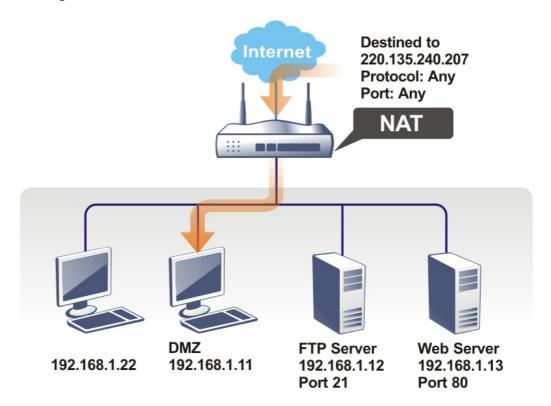

Note that the router has its own built-in services (servers) such as Telnet, HTTP and FTP etc. Since the common port numbers of these services (servers) are all the same, you may need to reset the router in order to avoid confliction.

For example, the built-in web user interface in the router is with default port 80, which may conflict with the web server in the local network, http://192.168.1.13:80. Therefore, you need to change the router's http port to any one other than the default port 80 to avoid conflict, such as 8080. This can be set in the System Maintenance >>Management Setup. You then will access the admin screen of by suffixing the IP address with 8080, e.g., http://192.168.1.1:8080 instead of port 80.

II-4-2 DMZ Host

As mentioned above, Port Redirection can redirect incoming TCP/UDP or other traffic on particular ports to the specific private IP address/port of host in the LAN. However, other IP protocols, for example Protocols 50 (ESP) and 51 (AH), do not travel on a fixed port. Vigor router provides a facility DMZ Host that maps ALL unsolicited data on any protocol to a single host in the LAN. Regular web surfing and other such Internet activities from other clients will continue to work without inappropriate interruption. DMZ Host allows a defined internal user to be totally exposed to the Internet, which usually helps some special applications such as Netmeeting or Internet Games etc.

The security properties of NAT are somewhat bypassed if you set up DMZ host. We suggest you to add additional filter rules or a secondary firewall.

Click DMZ Host to open the following page. You can set different DMZ host for each WAN interface. Click the WAN tab to switch into the configuration page for that WAN.

Available settings are explained as follows:

Item	Description
WAN 1	Enables or disables DMZ host None - Disables DMZ host function. Private IP - Allows WAN traffic to be sent to a specific LAN IP address.
Private IP	If Private IP mode has been selected, click the Choose IP button to select a LAN IP address.
Choose IP	Click this button and then a window will automatically pop up, as depicted below. The window consists of a list of private IP addresses of all hosts in your LAN network. Select one private IP address in the list to be the DMZ host. Ch Type: 192 When you have selected one private IP from the above dialog, the IP address will be shown on the following screen. Click OK to save the setting. NAT >> DMZ Host Setup Type: 192.168.1.9 Choose IP

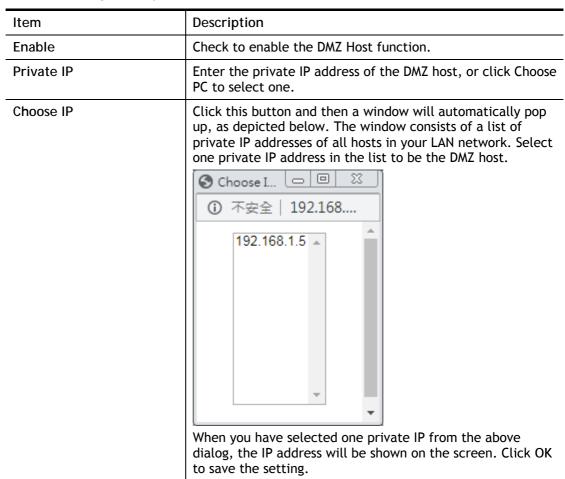

DMZ Host for WAN3 is slightly different with WAN1. See the following figure.

If you previously have set up WAN Alias for PPPoE or Static or Dynamic IP mode in WAN2 interface, you will find them in Aux. WAN IP for your selection.

Available settings are explained as follows:

After finishing all the settings here, please click OK to save the configuration.

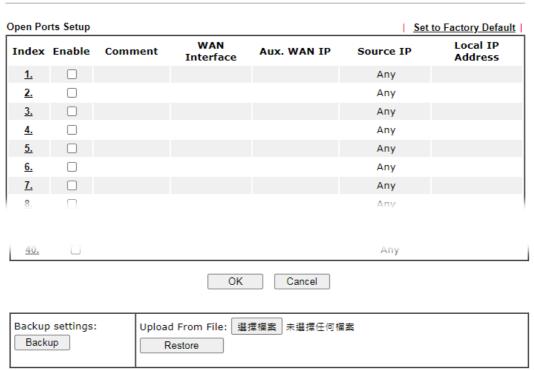

II-4-3 Open Ports

NAT >> Open Ports

The Open Ports function allows inbound traffic from specific ports on WAN interfaces to be forwarded to LAN clients. Unlike Port Redirection, LAN client ports cannot be remapped and must remain identical to the opened ports on the WAN interface.

It allows you to open a range of ports for the traffic of special applications.

The common application of Open Ports includes P2P application (e.g., BT, KaZaA, Gnutella, WinMX, eMule, and others), Internet Camera, etc. Ensure that you keep the application involved up-to-date to avoid falling victim to any security exploits.

Note:

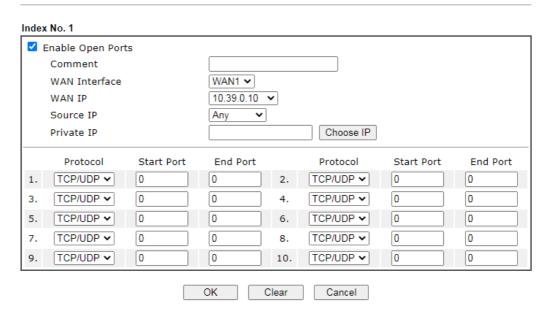

The port number values set in this page might be invalid due to the same values configured for Management Port Setup in <u>System Maintenance>>Management, Open VPN</u> and <u>SSL VPN</u>.

Item	Description
Index	Rule number. Click to view and edit the rule.
Enable	Select the box to enable the open port rule.
Comment	User-entered label that identifies the rule.
WAN Interface	The WAN port(s) whose incoming traffic will be forwarded to a LAN client.
Aux. WAN IP	Display the IP alias setting used by such index. If no IP alias setting exists, this field will not appear.
Source IP	The IP object of the source IP.
Local IP Address	LAN client to receive the forwarded WAN traffic.
Backup	Click it to backup the configuration of open ports settings.

Click it to restore the configuration of open ports settings. Before clicking, make sure upload the configuration file onto Vigor router.

To add or edit port settings, click one index number on the page. The index entry setup page will pop up. In each index entry, you can specify 10 port ranges for diverse services.

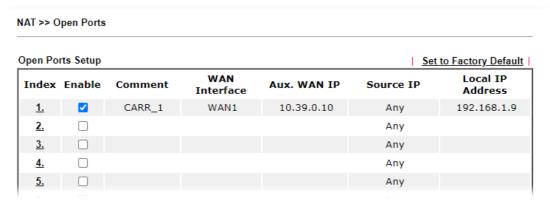

NAT >> Open Ports >> Edit Open Ports

Item	Description
Enable Open Ports	Select to enable this rule.
Comment	User-entered label that identifies the rule.
WAN Interface	The WAN port(s) whose incoming traffic will be forwarded to a LAN client. Select from a specific WAN interface WAN1 to WAN6, or choose ALL to apply the rule to all WAN interfaces.
WAN IP	Specify the WAN IP address that will be used for this entry. This setting is available when WAN IP Alias is configured.
Source IP	Any - Any IP can be used as the source IP.
	IP Object - Use the drop down list to specify an IP object proifle.
	IP Group - Use the drop down list to specify an IP group profile.
Private IP	IP address of LAN client to receive the forwarded WAN traffic. Click Choose IP to select.
	Choose IP - Click this button and, subsequently, a window having a list of private IP addresses of local hosts will automatically pop up. Select the appropriate IP address of the local host in the list.
Protocol	The protocol(s) to which this rule applies.
	TCP - forward only TCP traffic.
	UDP - forward only UDP traffic.
	TCP/UDP - forward both TCP and UDP traffic.
Start Port	The port number of the starting port to be forwarded.

End Port	The port number of the ending port to be forwarded. If only one port is to be forwarded, enter the same port number as the Start Port.
----------	--

After finishing all the settings here, please click OK to save the configuration.

II-4-4 Port Triggering

If you run programs that function as server applications where they expect to receive unsolicited traffic from the WAN, you can set up rules in Port Triggering to detect LAN-to-WAN traffic initiated by those programs, and automatically open up WAN ports to accept incoming traffic and forward it to the LAN client running the server applications.

Port Triggering is a variation of open ports function.

The key difference between "open port" and "port triggering" is:

- Once the OK button is clicked and the configuration has taken effect, "open port" keeps the ports opened forever.
- Once the OK button is clicked and the configuration has taken effect, "port triggering" will only attempt to open the ports once the triggering conditions are met.
- The duration that these ports are opened depends on the type of protocol used. The "default" durations are shown below and these duration values can be modified via telnet commands.

TCP: 86400 sec.

UDP: 180 sec.

IGMP: 10 sec.

TCP WWW: 60 sec.

TCP SYN: 60 sec.

Index	Enable	Comment	Triggering Protocol	Source IP	Triggering Port	Incoming Protocol	Incoming Port
<u>1.</u>				Any			
<u>2.</u>				Any			
<u>3.</u>				Any			
<u>4.</u>				Any			
<u>5.</u>				Any			
<u>6.</u>				Any			
<u>7.</u>				Any			
<u>8.</u>				Any			
<u>9.</u>				Any			
<u>10.</u>				Any			
< <u>1-10</u>	11-20	>>					Next >

Available settings are explained as follows:

Item	Description			
Index	Rule number. Click to view or modify rule settings.			
Enable	Select to enable the Port Triggering rule.			
Comment	User-entered label that identifies the rule.			
Triggering Protocol	The protocol(s) of the outgoing traffic that this rule monitors. TCP- monitor only TCP traffic. UDP- monitor only UDP traffic. TCP/UDP- monitor both TCP and UDP traffic.			
Source IP	The IP object of the source IP.			
Triggering Port	Display the port of the triggering packets. Outgoing traffic destined for these port numbers will trigger the opening WAN ports to incoming traffic.			
Incoming Protocol	Display the protocol for the incoming data of such triggering profile. The protocol(s) of the incoming traffic. TCP-open port(s) to TCP traffic. UDP- open port(s) to UDP traffic. TCP/UDP- open port(s) to both TCP and UDP traffic.			
Incoming Port	Display the port for the incoming data. Incoming traffic from the WAN destined for these port numbers be forwarded to the LAN client that triggered the rule.			

Click the index number link to open the configuration page.

No. 1 ☐ Enable Service User Defined **✓** Comment Source IP Any Triggering Protocol IP Object Triggering Port IP Group Incoming Protocol Incoming Port Note: The Triggering Port and Incoming Port should be input like this: 123-456,777-789 (legal),123-456,789 (legal), but 123-456-789 (illegal). OK Clear Cancel

Available settings are explained as follows:

Item	Description
Enable	Select to enable rule.
Service	Select from list of predefined service, or User Defined to manually configure triggering and incoming protocols and ports.
Comment	Enter the text to memorize the application of this rule.
Source IP	Any - Any IP can be used as the source IP. IP Object - Use the drop down list to specify an IP object proifle. IP Group - Use the drop down list to specify an IP group profile.
Triggering Protocol	The protocol(s) of the outgoing traffic that this rule monitors. TCP - monitor only TCP traffic. UDP - monitor only UDP traffic. TCP/UDP - monitor both TCP and UDP traffic.
Triggering Port	Outgoing traffic destined for these port numbers will trigger the opening WAN ports to incoming traffic. Enter the port or port range for such triggering profile.
Incoming Protocol	The protocol(s) of the incoming traffic. TCP-open port(s) to TCP traffic. UDP- open port(s) to UDP traffic. TCP/UDP- open port(s) to both TCP and UDP traffic. Select the protocol (TCP, UDP or TCP/UDP) for the incoming data of such triggering profile.
Incoming Port	Incoming traffic from the WAN destined for these port numbers be forwarded to the LAN client that triggered the rule. Enter the port or port range for the incoming packets.

After finishing all the settings here, please click OK to save the configuration.

Open Port and Port Triggering Compared

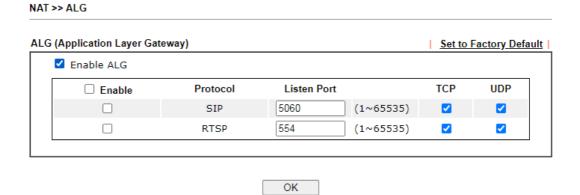

Port Triggering	Open Port
Ports are opened when the triggering condition is met.	Ports are always open on the WAN interface.
	Opened ports will be closed after predefined durations have elapsed.
	Default duration values vary depending on the protocol and traffic content:
	 TCP (all TCP ports, except those that pass HTTP and HTTPS traffic): 86400 seconds
	UDP: 180 seconds
	TCP WWW (TCP ports that engage in HTTP and HTTPS communication): 60 seconds
	 TCP SYN: 60 seconds (SYN packets expire after 60 seconds)
	These values can be changed by using the command line interface (telnet or SSH).

II-4-5 ALG

ALG means Application Layer Gateway. There are two methods provided by Vigor router, RTSP (Real Time Streaming Protocol) ALG and SIP (Session Initiation Protocol) ALG, for processing the packets of voice and video.

RTSP ALG makes RTSP message, RTCP message, and RTP packets of voice and video be transmitted and received correctly via NAT by Vigor router.

However, SIP ALG makes SIP message and RTP packets of voice be transmitted and received correctly via NAT by Vigor router.

Item	Description
Enable ALG	Check to enable such function.
Listen Port	Type a port number for SIP or RTSP protocol.
ТСР	Check the box to make correspond protocol message packet from TCP transmit and receive via NAT.
UDP	Check the box to make correspond protocol message packet from UDP transmit and receive via NAT.

II-5 Applications

Dynamic DNS

Most ISPs assigns dynamic WAN IP addresses to their customers. Dynamic IP addresses presents challenges to users who would like to accept remote connections to their LANs from the Internet, as service could be disrupted due to the IP address changing without notice. By setting up service with a Dynamic DNS (DDNS) provider, and configuring Dynamic DNS updates on the Vigor router, you can have reliable access to your network by means of an easy-to-remember domain address that resolves to the most current WAN IP address.

The Vigor router supports a wide range of DDNS providers, such as DynDNS, No-IP.com, DtDNS, and ChangeIP. Please contact the DDNS provider of your choice to set up service before configuring DDNS on the router.

LAN DNS / DNS Forwarding

LAN DNS allows the network administrator to override standard DNS resolutions for selecting domain addresses. The router will respond to queries on matched domain addresses with custom IP addresses.

DNS Forwarding allows the network administrator to forward DNS queries to different DNS servers based on the domain name.

LAN DNS and DNS Forwarding only affect DNS queries that are sent to the WAN through the router. DNS queries that are directed to a DNS server on the LAN will not be intercepted by the router.

Schedule

The Vigor router has a built-in clock which can update itself manually or automatically by means of Network Time Protocols (NTP). As a result, you can not only schedule the router to dialup to the Internet at a specified time, but also restrict Internet access to certain hours so that users can connect to the Internet only during certain hours, say, business hours. The schedule is also applicable to other functions.

RADIUS/TACACS+

Remote Authentication Dial-In User Service (RADIUS) is a security authentication client/server protocol that supports authentication, authorization and accounting, which is widely used by Internet service providers. It is the most common method of authenticating and authorizing dial-up and tunneled network users.

The built-in RADIUS client feature enables the router to assist the remote dial-in user or a wireless station and the RADIUS server in performing mutual authentication. It enables centralized remote access authentication for network management.

LDAP /Active Directory Setup

Lightweight Directory Access Protocol (LDAP) is a communication protocol for using in TCP/IP network. It defines the methods to access distributing directory server by clients, work on directory and share the information in the directory by clients. The LDAP standard is established by the work team of Internet Engineering Task Force (IETF).

As the name described, LDAP is designed as an effect way to access directory service without the complexity of other directory service protocols. For LDAP is defined to perform, inquire and modify the information within the directory, and acquire the data in the directory

securely, therefore users can apply LDAP to search or list the directory object, inquire or manage the active directory.

UPnP

The Vigor supports UPnP (Universal Plug and Play), which is a suite of network protocols that simplifies network configuration. Applications and network devices on the LAN, that support UPnP, may request the router to modify its settings to allow NAT Traversal, so that WAN hosts can connect to them directly.

Examples of applications and devices that support UPnP include file-sharing applications such as uTorrent, Vuze and eMule, gaming consoles such as the Sony PlayStations 3 and 4 Xbox 360 and Xbox One, media streaming applications such as Plex and XBMC, and messaging and calling applications such as Skype. To find out if a certain application or network device supports or requires UPnP, please consult its user manual or check with its vendor.

Wake on LAN

Using the Wake on LAN (WoL) feature, LAN clients that support WoL can be powered on or resume from sleep over the network, without the need for physical access to the device.

In order for LAN clients to be able to woken from sleep or off states, the network interface card must be configured to monitor Wake-on-LAN messages. Consult the documentation of the LAN client for details on setting up its network interface for Wake on LAN.

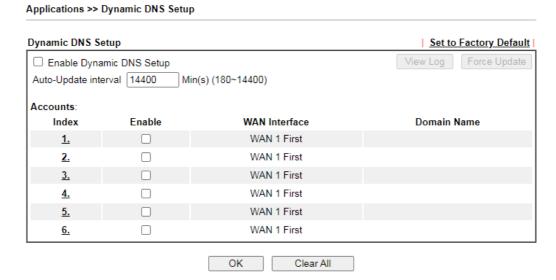

Web User Interface

II-5-1 Dynamic DNS

Enable the Function and Add a Dynamic DNS Account

To begin configuring Dynamic DNS, from the main menu, navigate to Applications, and select Dynamic DNS. The Dynamic DNS main configuration screen appears:

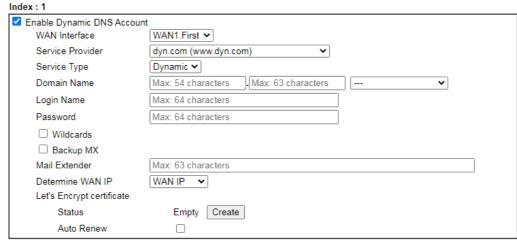

Item	Description
Enable Dynamic DNS Setup	Select to enable DDNS function.
Set to Factory Default	Click to clear all profiles to factory settings.
View Log	Select to display the most recent DDNS update messages.
Force Update	Click to connect immediately to DDNS servers to update IP address information.
Auto-Update interval	The frequency, in minutes, at which the router connects to DDNS servers to update IP address information.
Index	Click to bring up the configuration page of the DDNS profile.

Enable	Check the box to enable such account.
WAN Interface	Shows the WAN interface associated with the DDNS profile.
Domain Name	Shows the domain name with which the profile is associated.

After clicking on the index number, the detail configuration screen for the DDNS profile appears:

Applications >> Dynamic DNS Setup >> Dynamic DNS Account Setup

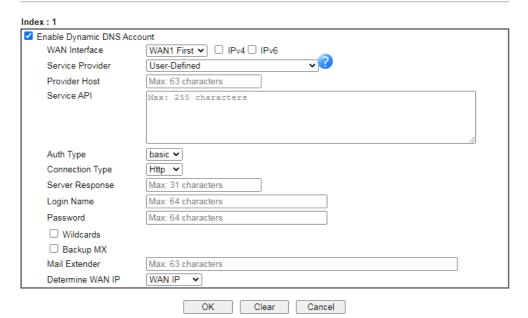

Note:

- 1. The Create function of Let's Encrypt certificate works only when the current profile has been stored.
- 2. WAN IP must be public IP when create Let's Encrypt certificate.

If User-Defined is specified as the service provider, the web page will be changed slightly as follows:

Applications >> Dynamic DNS Setup >> Dynamic DNS Account Setup

Item	Description
Enable Dynamic DNS Account	Select to enable this DDNS profile.

WAN Interface

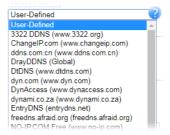

Select the WAN interface to monitor for IP address changes.

WANx First - The specified WAN interface will be examined first. If it is online, its IP address will be used in the DDNS update.

WANx Only - Only the specified WAN interface will be examined. If the WAN interface is online, its IP address will be used in the DDNS update. Otherwise no update will be performed for this DDNS profile.

Service Provider

Select the DDNS provider. If your DDNS provider is not listed, select User-Defined and manually configure the profile.

selected as Service Provider.

- Provider Host Enter the IP address or the domain name of the host which provides related service.
 Note that such option is available when Customized is
- Service API Enter the API information obtained from DDNS server.

Note that such option is available when Customized is selected as Service Provider.

(e.g:

/dynamic/dns/update.asp?u=jo***&p=jo*******&hostna me=j****.changeip.org&ip=###IP### &cmd=update&offline=0)

- Auth Type Two types can be used for authentication.
 Basic Username and password defined later can be shown from the packets captured.
 - URL Username and password defined later can be shown in URL.
 - (e.g., http://ns1.vigorddns.com/ddns.php?username=xxxx&password=xxxx&domain=xxxx.vigorddns.com)
 - Note that such option is available when Customized is selected as Service Provider.
- Connection Type There are two connection types (HTTP and HTTPs) to be specified. Note that such option is available when Customized is selected as Service Provider.
- Server Response Type any text that you want to receive from the DDNS server.
 - Note that such option is available when Customized is selected as Service Provider.

If other service provider is selected, you have to configure Service Type, Domain Name, Login Name and Password.

- Service Type Select the service type that matches that of your DynDNS account. If you are unsure which service type to select, try Dynamic first. This options is applicable to DynDNS only.
- Domain Name The domain and subdomain to be

	updated.
	upuateu.
Login Name	The login name of the DDNS account.
Password	The password of the DDNS account.
Wildcard and Backup MX	The Wildcard and Backup MX (Mail Exchange) features are not supported for all Dynamic DNS providers. You could get more detailed information from their websites.
Mail Extender	If the mail server is defined with another name, please enter the name in this area. Such mail server will be used as backup mail exchange.
Determine WAN IP	If a Vigor router is installed behind any NAT router, you can enable such function to locate the real WAN IP.
	When the WAN IP used by Vigor router is private IP, this function can detect the public IP used by the NAT router and use the detected IP address for DDNS update.
	There are two methods offered for you to choose:
	 WAN IP - The IP address of the router's WAN interface will be used.
	 Internet IP - The real public IP address will be used. Select this option if the IP address assigned to the router's WAN interface is not the actual external IP address.

Click OK to save changes, Clear to clear all settings, or Cancel to discard changes and return to the main DDNS screen.

DrayDDNS Settings

DrayDDNS, a new DDNS service developed by DrayTek, can record multiple WAN IP (IPv4) on single domain name. It is convenient for users to use and easily to set up. Each Vigor Router is available to register one domain name.

Choose DrayTek Global as the service provider, the web page will be displayed as follows:

Index: 1 Enable Dynamic DNS Account Wizard View Log DrayDDNS (Global) Service Provider ~ Status Inactivated Domain Name Max: 54 characters . drayddns.com Sync domain Determine WAN IP WAN IP ✓ ✓ IPv4 □ IPv6 ☐ WAN 1 ☐ WAN 3 ☐ Alias IP in <u>Service Status Setup</u> WAN Interfaces Connection Type Http ∨ Let's Encrypt certificate Status Empty Create

OK	Clear	Cancel

Available settings are explained as follows:

Auto Renew

Applications >> Dynamic DNS Setup >> Dynamic DNS Account Setup

Item	Description
Enable Dynamic DNS Account	Check this box to enable the current account. If you did check the box, you will see a check mark appeared on the Active column of the previous web page in step 2).
Service Provider	Choose DrayTek Global as the service provider. Wizard - This button is available when DrayTek Global is selected as Service Provider. To activate the DrayTek's DDNS service, click it to enable license issued by DrayTek through Wizards>>Service Activation Wizard.
Status	Display if the license is actvtaed or not.
Determine WAN IP	If a Vigor router is installed behind any NAT router, you can enable such function to locate the real WAN IP. When the WAN IP used by Vigor router is private IP, this function can detect the public IP used by the NAT router and use the detected IP address for DDNS update. There are two methods offered for you to choose: WAN IP - If it is selected and the WAN IP of Vigor router is private, DDNS update will take place right away.
	 Internet IP - If it is selected and the WAN IP of Vigor router is private, it will be converted to public IP before DDNS update takes place.
WAN Interfaces	WANx - While connecting, the router will use WANx as the channel for such account.
Let's Encrypt certificate	Create - Click it to generate a certificate issued by Let's Encrypt for applying to such DDNS account. Auto Renew - Check the box to make the system update the certificate automatically.

Disable the Function and Clear all Dynamic DNS Accounts

Uncheck Enable Dynamic DNS Setup, and click Clear AII button to disable the function and clear all accounts from the router.

Delete a Dynamic DNS Account

Click the Index number you want to delete and then click Clear AII button to delete the account.

DDNS updates take place when:

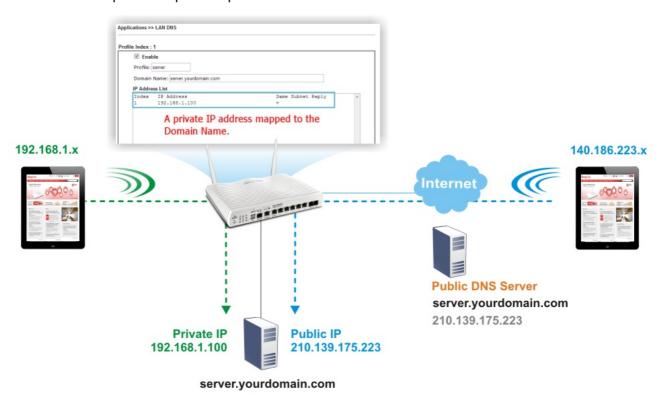

- The router is powered on or rebooted.
- The public IP address of any WAN interface changes.
- The online status of a WAN interface changes (going from online to offline or vice versa).
- The DDNS function is changed from disabled to enabled.
- A DDNS entry is modified and enabled.
- The Auto-Update Interval has elapsed.

Procedures for Setting up a Dynamic DNS Entry

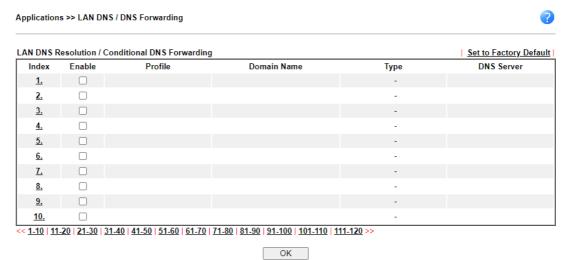

- Contact the dynamic DNS provider of your choice and have service set up. Most DDNS
 providers accept signups on their websites. Service could be provided free of charge or
 for a fee.
- 2. Create a DDNS entry on the router by selecting the appropriate DDNS provider and enter the account information.
- 3. Make sure that both the DDNS entry and the DDNS feature are enabled on the router.
- 4. Click the View Log button on the DDNS main page to bring up the update log.
- 5. Examine the update log to make sure the update was successful.
- 6. If the update was not successful, verify the DDNS entry to make sure the settings are entered correctly.

II-5-2 LAN DNS / DNS Forwarding

LAN DNS lets the network administrators host servers with privacy and security. When the network administrators of your office set up FTP, Mail or Web server inside LAN, you can specify specific private IP address (es) to correspondent servers. Thus, even the remote PC is adopting public DNS as the DNS server, the LAN DNS resolution on Vigor2135 series will respond the specified private IP address.

To start configuring LAN DNS or DNS Forwarding, from the main menu, click Applications, followed by LAN DNS / DNS Forwarding.

Each item is explained as follows:

Item	Description
Set to Factory Default	Click to clear all profiles to factory settings.

Index	Click to bring up the configuration page for the profile.
Enable	Select to enable this profile.
Profile	Shows the name of the profile.
Domain Name	Shows the domain name configured for the profile.
Туре	Display the type (LAN DNS or DNS Forwarding) of the profile.
DNS Server	DNS server to which DNS queries for the specified domain name will be forwarded.

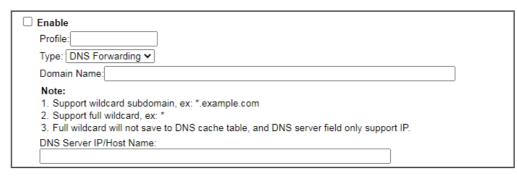

To configure a profile, click on its index to bring up the configuration page.

Applications >> LAN DNS / DNS Forwarding

Or,

Applications >> LAN DNS / DNS Forwarding

Profile Index : 1

OK Clear

Item	Description

Enable	Select to enable this profile.
Profile	Enter a name to identify this profile. Note: If you type a name here for LAN DNS and click OK to save the configuration, the name also will be applied to conditional DNS forwarding automatically.
Туре	Select LAN DNS or DNS Forwarding
If LAN DNS is selected	Domain Name - Enter the domain name for the router to look for in DNS queries to intercept and reply to. Wildcards in the form of asterisks (*) can be used to match a domain level. For example, *.draytek.com will match domain names such as www.draytek.com and ftp.draytek.com, whereas www.draytek.* will match domain names such as www.draytek.com and www.draytek.co.uk. CNAME - Click Add to add an domain name alias for the domain name. Click Delete next to an alias entry to delete it. IP Address List - The IP address listed here will be used for mapping with the domain name specified above. In general, one domain name maps with one IP address. If required, you can configure two IP addresses mapping with the same domain name. Add - Click Add to bring up the Add IP Address dialog box:
	Host's IP Address Only use this record for responding to DNS queries if the sender's IP Address (client making the request) is in the same subnet as the host's IP Address. OK Close
	 Host's IP Address - Enter the IP address to be returned in response to a DNS query for the configured domain names and aliases.
	 Only use this record Select to use this IP address only if the IP address of the source of the DNS query belongs to the same subnet as the host IP address entered above.
	After changes have been made, click OK to save and dismiss the dialog box, or Close to discard the changes and dismiss the dialog box. Delete -To delete an IP address, click on it and then click Delete.
If DNS Forwarding is selected	Domain Name - Enter the domain name for the router to look for in DNS queries to intercept and reply to. Wildcards in the form of asterisks (*) can be used to match a domain level. For example, *.draytek.com will match domain names such as www.draytek.com and ftp.draytek.com, whereas www.draytek.* will match domain names such as www.draytek.com and www.draytek.co.uk. DNS Server IP Address - Enter the IP address of the DNS server you want to use for DNS forwarding.

To save changes made to the LAN DNS profile, click OK. To clear the profile and restore the factory default blank values, click Clear.

II-5-3 DNS Security

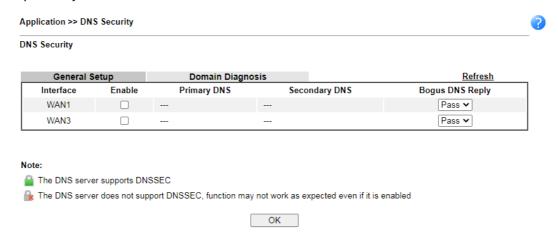

Domain Name System Security Extensions (DNSSEC) protects against DNS-based attacks by authenticating DNS responses from DNS resolvers.

The DNS servers must support DNS security validation for the feature to function properly.

To configure DNS security, from the main menu, click Applications, followed by DNS Security.

II-5-3-1 General Setup

All of WAN interfaces of Vigor router can be configured with DNS Security enabled respectively.

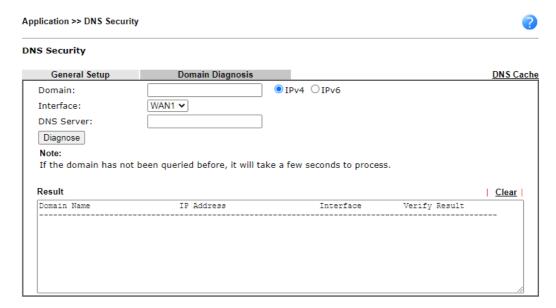

Available settings are explained as follows:

Item	Description
Interface	The WAN interface name for which DNS security is to be configured.
Enable	Select to enable DNS security for this WAN Interface.
Primary DNS	Shows the primary DNS server IP address in effect for this WAN.
Secondary DNS	Shows the secondary DNS server IP address in effect for this WAN.
Bogus DNS Reply	Show action to be taken for DNS responses that fail authentication. Choose Pass or Drop.
	Pass - Pass DNS result.
	Drop - Do not pass DNS result.

Press OK to save changes.

II-5-3-2 Domain Diagnose

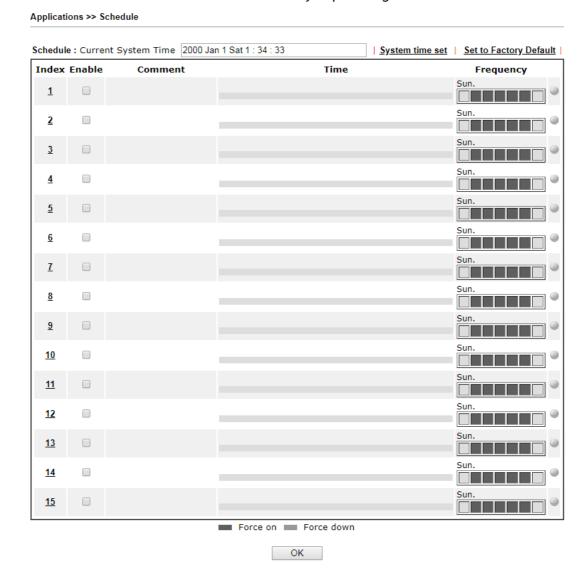

While using the Domain Diagnose feature, you can check to see if the router's DNS security function is working properly, or whether a given domain is secured by DNS security. Note that DNS Security has to be first enabled or the test results would not be meaningful.

Item	Description
Domain	Enter domain address to be diagnosed. Select the type of IP address to be looked up. IPv4 - looks up A records. IPv6 - looks up AAAA records.
Interface	Select the WAN port to be used for the lookup.
DNS Server	Enter the IPv4 address of the DNS server to be used for the lookup.
Diagnose	Click to begin DNS lookup.
Result	The history of domain diagnosis is shown in the Result panel.

II-5-4 Schedule

Time schedules can be created and used with router features that support them, so that those features can be turned on and off automatically at preconfigured times.

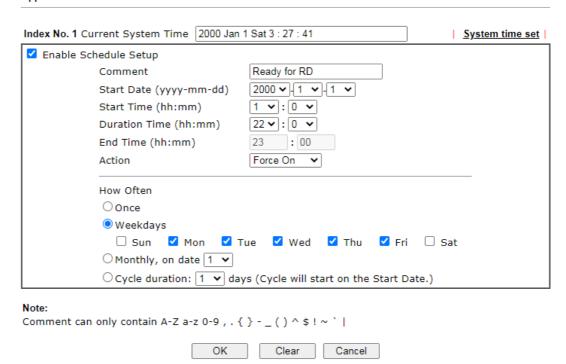

Item	Description
Current System Time	Shows the current time of the router.
System time set	Click to navigate to System Maintenance >> Time and Date to set the system time and date.
Set to Factory Default	Reset all schedules to factory default values.
Index	Shows the index number of the schedule entry.
Enable	Select to enable the schedule; clear to disable it.
Comment	Shows the name given to the schedule.
Time	Shows the start and end times of the schedule. The time interval of the schedule is indicated in dark grey.

Frequency	Shows the days of the week configured for the schedule. Selected days are shown in dark grey.
	If it lights in green, it means such schedule is active.

To configure a schedule, click on its index to bring up the settings page.

Applications >> Schedule

Item	Description		
Enable Schedule Setup	Select to enable the schedule; clear to disable it.		
Comment	Name to identify this schedule entry.		
Start Date (yyyy-mm-dd)	The date when the entry comes into effect.		
Start Time (hh:mm)	The time when the schedule is triggered. See the How Often setting below for details.		
Duration Time (hh:mm)	How long the action lasts when the scheduled is triggered.		
End Time (hh:mm)	It will be calculated automatically when Start Time and Duration Time are configured well.		
Action	Action to take when the schedule is triggered.		
	Force On - The feature with which this schedule is associated will be turned on.		
	Force Down - The feature with which this schedule is associated will be turned off.		
How Often	How frequently the schedule is triggered.		
	 Once - The schedule is triggered once, on the Start Date at the Start Time, for the Duration Time. 		
	 Weekdays - The schedule will be triggered repeatedly, starting on the Start Date at the Start Time, on the selected days of the week, at the Start Time, for the Duration Time. 		

- Monthly, on date The router will only execute the action applied such schedule on the date (1 to 28) of a month.
- Cycle duration Type a number as cycle duration.
 Then, any action applied such schedule will be
 executed per several days. For example, "3" is selected
 as cycle duration. That means, the action applied such
 schedule will be executed every three days since the
 date defined on the Start Date.

To save changes made to the Schedule, click OK. To clear the schedule and restore the factory default blank values, click Clear. To cancel the changes and return to the main Schedule page, click Cancel.

Example

Suppose you want to control the PPPoE Internet access connection to be always on (Force On) from 9:00 to 18:00 for whole week. Other time the Internet access connection should be disconnected (Force Down).

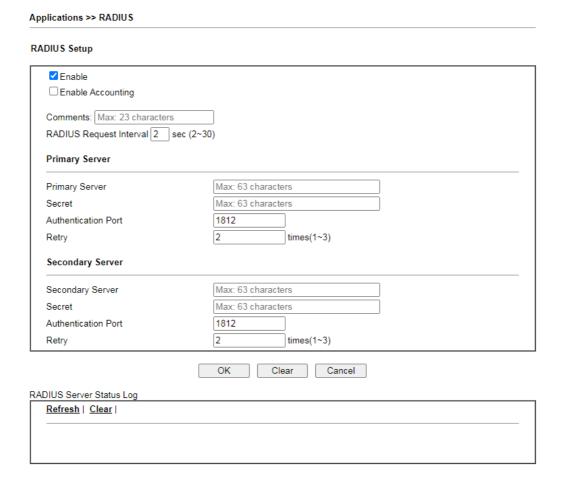

- 1. Make sure the PPPoE connection and Time Setup is working properly.
- 2. Configure the PPPoE always on from 9:00 to 18:00 for whole week.
- 3. Configure the Force Down from 18:00 to next day 9:00 for whole week.
- 4. Assign these two profiles to the PPPoE Internet access profile. Now, the PPPoE Internet connection will follow the schedule order to perform Force On or Force Down action according to the time plan that has been pre-defined in the schedule profiles.

II-5-5 RADIUS

Remote Authentication Dial-In User Service (RADIUS) is a security authentication client/server protocol that supports authentication, authorization and accounting, which is widely used by Internet service providers. It is the most common method of authenticating and authorizing dial-up and tunneled network users.

The built-in RADIUS client feature enables the router to assist the remote dial-in user or a wireless station and the RADIUS server in performing mutual authentication. It enables centralized remote access authentication for network management.

Vigor router can be operated as a RADIUS client. This web page is used to configure settings for external RADIUS server. Then LAN users of Vigor router will be authenticated and accounted by such server for network application.

Item	Description	
Enable	Check to enable RADIUS client profile. Comments - Enter a brief description for this profile.	
Enable Accounting	RADIUS Accounting is a network customer billing mechanism for RADIUS server. If enabled, Vigor router will deliver accounting request (e.g., IP address, traffic from the client) to the specified RADIUS server periodically.	
Primary Server	Primary Server - Enter the IP address of the RADIUS server. Secret - The RADIUS server and client share a secret that is	

used to authenticate the messages sent between them. Both sides must be configured to use the same shared secret. The maximum length of the shared secret you can set is 36 characters.

Authentication Port - The UDP port number that the RADIUS server is using. The default value is 1812, based on RFC 2138.

Accounting Port - It is available when Enable Accounting is selected. Set a port number used by the RADIUS server to receive the accounting request. Default number is 1813.

Disconnect Message Port - It is available when Enable Accounting is selected. Set a port number for the router to receive the disconnection message. Default number is 3799.

Interim Update Interval - Set an interval time from 10 minutes to 1440 minutes (1 day) for the router to deliver the accounting request to the RADIUS server.

Retry - Set the number of attempts to perform reconnection with RADIUS server. If the connection (with the Primary Server) still fails, stop the connection attempt and begin to make connection with the secondary server.

Secondary Server

Secondary Server - Enter the IP address of the RADIUS server.

Secret - The RADIUS server and client share a secret that is used to authenticate the messages sent between them. Both sides must be configured to use the same shared secret. The maximum length of the shared secret you can set is 36 characters.

Authentication Port - The UDP port number that the RADIUS server is using. The default value is 1812, based on RFC 2138.

Accounting Port - It is available when Enable Accounting is selected. Set a port number used by the RADIUS server to receive the accounting request. Default number is 1813.

Disconnect Message Port - It is available when Enable Accounting is selected. Set a port number for the router to receive the disconnection message. Default number is 3799.

Interim Update Interval - Set an interval time from 10 minutes to 1440 minutes (1 day) for the router to deliver the accounting request to the RADIUS server.

Retry - Set the number of attempts to perform reconnection. If the connection (with the Secondary Server) still fails, stop the connection attempt. The client authentication would be determined as "failed".

RADIUS Server Status Log

Display the record of current status of RADIUS server.

To save changes on the page, click OK. To discard changes, click Cancel. To reset all settings to blank, click Clear.

II-5-6 UPnP

To configure UPnP settings, from the Main Menu select Applications >> UPnP.

Applications >> UPnP	
UPnP	
☐ Enable UPnP Service	Default WAN ✔
☐ Enable Connection Control Service	Default WAN
☐ Enable Connection Status Service	WAN1 WAN3
Note: To allow NAT pass-through to a UPnP enabled client the connection	control service must also be enabled.
OK Clear	Cancel

Available settings are explained as follows:

Item	Description
Enable UPnP Service	Select to enable UPnP.
Default WAN	Select the WAN port on which ports will be opened in response to UPnP commands.
Enable Connection Control Service	Select to enable the connection control service.
Enable Connection Status Service	Select to enable the connection status service.

To save changes on the page, select OK; to discard changes, select Cancel; to revert all settings to the factory default, select Clear.

The reminder as regards concern about Firewall and UPnP:

Can't work with Firewall Software

Enabling firewall applications on your PC may cause the UPnP function not working properly. This is because these applications will block the accessing ability of some network ports.

Security Considerations

Activating UPnP allows any application or network devices to open ports on the WAN side to allow connections to the LAN, which could compromise network security. Also if UPnP applications or network devices malfunction or terminate abnormally, the opened ports may remain open indefinitely, and thus increasing the chance of it getting exploited by malicious parties.

If you do not have applications or network devices which requires UPnP, you are advised to disable UPnP.

Info

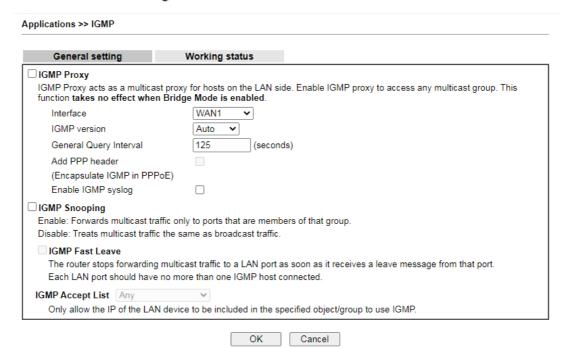

UPnP is required for some applications such as PPS, Skype, eMule...and etc. If you are not familiar with UPnP, it is suggested to turn off this function for security.

II-5-7 IGMP

Internet Group Management Protocol (IGMP) is an IPv4 communication protocol for establishing multicast group memberships.

To configure IGMP settings, from the Main Menu select Applications >> IGMP.

II-5-7-1 General Setting

Item	Description
IGMP Proxy	Check this box to enable this function. The application of multicast will be executed through WAN /PVC/VLAN port. In addition, such function is available in NAT mode.
	Interface - Specify an interface for packets passing through.
	IGMP version - At present, two versions (v2 and v3) are supported by Vigor router. Choose the correct version based on the IPTV service you subscribe.
	General Query Interval - Vigor router will periodically check which IP obtaining IPTV service by sending query. It might cause inconvenience for client. Therefore, set a suitable time (unit: second) as the query interval to limit the frequency of query sent by Vigor router.
	Add PPP header - Check this box if the interface type for IGMP is PPPoE. It depends on the specifications regulated by each ISP. If you have no idea to enable or disable, simply contact your ISP providers.
	Enable IGMP syslog - Check the box to store the IGMP status onto Syslog.

IGMP Snooping	Select to enable IGMP Snooping so that multicast traffic are forwarded to IGMP clients that have joined a multicast group.
	IGMP Fast Leave - This option is shown only when IGMP Snooping is enabled. Select to enable IGMP Fast Leave.
	Normally when the router receives a "leave" message from an IGMP host, it will send a last member query message to see if there are still members within the multicast group. When Fast Leave is enabled, multicast for a group is immediately terminated when the last host in that group sends a "leave" message.
	IGMP Accept List - Only the device with the IP address specified here is able to use IGMP.

To save changes on the page, select OK; to discard changes, select Cancel.

II-5-7-2 Working Status

Displays a list of active multicast groups.

Applications >> IGMP

Gener	ral setting	Working statu	S			
ulticast Grou	un Table					Refres
Index	Group	ID	P1	P2	P3	P4
MP Device	Table					
Index	MAC Address	IP Add	Iress	Interface	П	IGMP Version

Item	Description
Refresh	Click to reload the Multicast Group Table with the latest information.
Index	Index number of the multicast group.
Group ID	ID port of the multicast group, which is within the IP range reserved for IGMP, 224.0.0.0 through 239.255.255.254.
P1 to P4	LAN ports that have IGMP hosts joined to this multicast group.

II-5-8 Wake on LAN

Using the Wake on LAN (WoL) feature, LAN clients that support WoL can be powered on or resume from sleep over the network, without the need for physical access to the device.

In order for LAN clients to be able to wake from sleep or off states, the network interface card must be configured to monitor Wake-on-LAN messages. Consult the documentation of the LAN client for details on setting up its network interface for Wake on LAN.

If you wish to be able to select the IP address of the Wake-on-LAN client, its MAC address must first be bound to a static IP address using the Bind IP to MAC function.

To configure Wake on LAN settings, from the Main Menu select Applications >> Wake on LAN.

Applications >> Wake on LAN/WAN

Wake on LAN	Wake on WAN
Wake by :	MAC Address ✔
IP Address:	🗸
MAC Address :	: : : : : Wake Up!
Result	
	//

Note:

Wake on LAN integrates with Bind IP to MAC function; only bound PCs can wake up through IP.

Item	Description	
Wake by	The type of address of the LAN client to be woken up.	
	 If you choose Wake by MAC Address, you have to Enter the correct MAC address of the host in MAC Address boxes. 	
	 If you choose Wake by IP Address, you have to choose the correct IP address. 	
IP Address	The IP addresses that have been configured in Firewall>>Bind IP to MAC will be shown in this drop down list.	
	Select the IP address of the LAN client.	
MAC Address	Enter the MAC address of the LAN client.	
Wake Up	Click to send Wake-on-LAN message to the specified LAN client.	
Result	Result of the transmission of the Wake-on-LAN message.	

II-5-9 SMS / Mail Alert Service

You can set up SMS or mail profiles for the router to send events or alerts to designated recipients. Up to 10 SMS profiles and 10 mail profiles can be configured.

II-5-9-1 SMS Alert

To configure SMS alert profiles, select the SMS Alert tab.

Applications >> SMS / Mail Alert Service

Note:

All the SMS Alert profiles share the same "Sending Interval" setting if they use the same SMS Provider.

Available settings are explained as follows:

Item	Description
Set to Factory Default	Click to clear all SMS alert profiles.
Enable	Select the checkbox to enable the profile.
SMS Provider	Select the profile of the SMS provider to be used. To set up or modify SMS provider profiles, click the hyperlink SMS Provider to go to Objects Setting >> SMS/Mail Service Object.
Recipient Number	Enter the recipient's SMS number.
Notify Profile	Select the notification profile to be used. To set up or modify notification object profiles, click the hyperlink Notify Profile to go to Objects Setting >> Notification Object.
Schedule (1-15)	Enter up to 2 schedule profile indexes. To set up or modify schedule profiles, click the hyperlink Schedule(1-15) to go to Applications >> Schedule.

After finishing all the settings here, please click OK to save the configuration.

II-5-9-2 Mail Alert

To configure mail alert profiles, select the SMS Alert tab.

Application >> SMS / Mail Alert Service

Note:

All the Mail Alert profiles share the same "Sending Interval" setting if they use the same Mail Server.

Available settings are explained as follows:

Item	Description
Set to Factory Default	Click to clear all mail alert profiles.
Enable	Select the checkbox to enable the profile.
Mail Service	Select the profile of the mail provider to be used. To set up or modify a mail provider profile, click the hyperlink Mail Service to go to Objects Setting >> SMS/Mail Service Object.
Mail Address	Enter the recipient's email address.
Notify Profile	Select the notification profile to be used. To set up or modify a notification object profile, click the hyperlink Notify Profile to go to Objects Setting >> Notification Object.
Schedule (1-15)	Enter up to 2 schedule profile indexes. To set up or modify schedule profiles, click the hyperlink Schedule(1-15) to go to Applications >> Schedule.

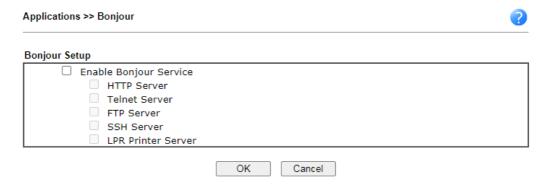

After finishing all the settings here, please click OK to save the configuration.

II-5-10 Bonjour

Bonjour is Apple's implementation of zero-configuration networking (Zeroconf), a technology that allows automatic discovery and configuration of network devices and services. Bonjour is built into OS X, and versions for Windows PCs can be downloaded without charge from Apple's website.

Without Bonjour, routers, computers, and other network peripherals would require manual configuration of network settings such as IP addresses and port numbers, which could be complex and cumbersome. By enabling Bonjour on the Vigor router, users only need to know the name of the router in order to set up connectivity between LAN devices, and the router and the peripherals that are connected to it.

To enable the Bonjour service, click Application>>Bonjour to open the following page. Check the box(es) of the server service(s) that you want to share to the LAN clients.

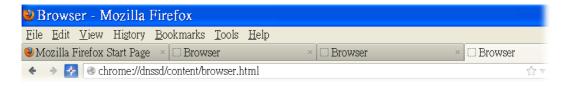

Available settings are explained as follows:

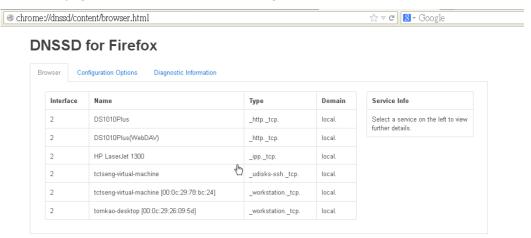

Item	Description
Enable Bonjour Service	Select to enable the Bonjour service on the router. The rest of the checkboxes will be enabled for selection when this checkbox has been selected.
HTTP Server	Select to allow the router's HTTP server to be discovered via Bonjour.
Telnet Server	Select to allow the router's telnet server to be discovered via Bonjour.
FTP Server	Select to allow the router's FTP server to be discovered via Bonjour.
SSH Server	Select to allow the router's SSH server to be discovered via Bonjour.
LPR Print Server	Select to allow the router's LPR server to be discovered via Bonjour. This allows printers attached to the router's USB ports to be discovered.

Below shows an example for applying the bonjour feature that Vigor router can be used as the FTP server.

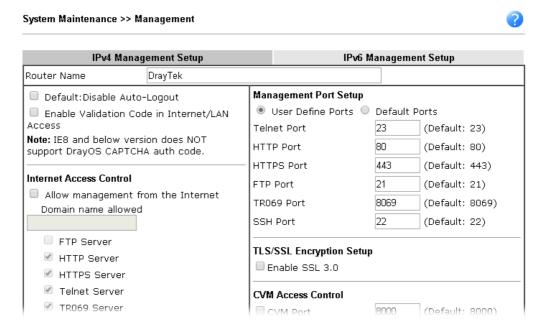

1. Here, we use Firefox and DNSSD to discover the service in such case. Therefore, just ensure the Bonjour client program and DNSSD for Firefox have been installed on the computer.

2. Open the web browse, Firefox. If Bonjour and DNSSD have been installed, you can open the web page (DNSSD) and see the following results.

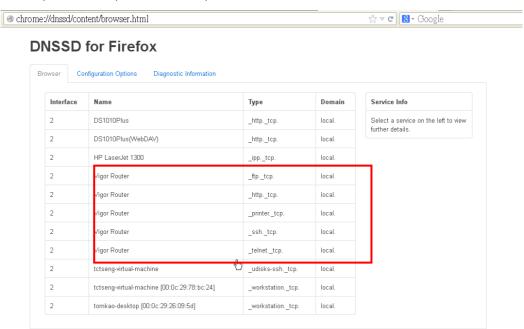

Open System Maintenance>>Management. Type a name as the Router Name and click OK.

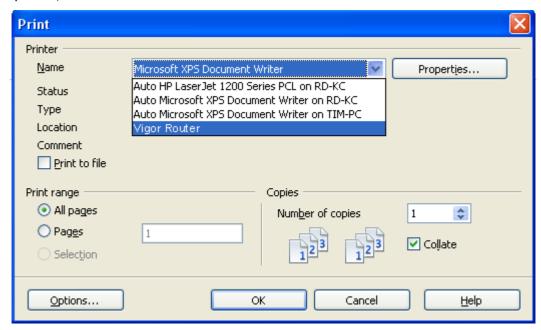

4. Next, open Applications>>Bonjour. Check the service that you want to use via Bonjour.

5. Open the DNSSD page again. The available items will be changed as the follows. It means the Vigor router (based on Bonjour protocol) is ready to be used as a printer server, FTP server, SSH Server, Telnet Server, and HTTP Server.

6. Now, any page or document can be printed out through Vigor router (installed with a printer).

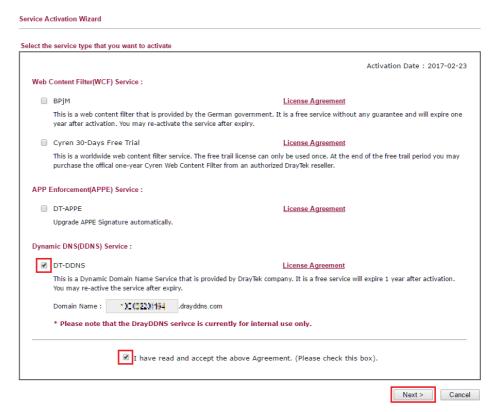

Application Notes

A-1 How to use DrayDDNS?

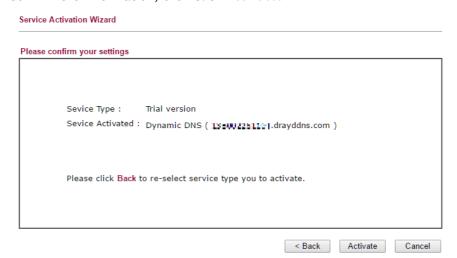

Vigor router supports various DDNS service providers, user can set up user-defined profile to update the DDNS even the service provider is not on the list. Now, DrayTek starts to support our own DDNS service - DrayDDNS. We will provide a domain name for each Vigor Router, this single domain name can record IP addresses of all WAN.

Activate DrayDDNS License

 Go to Wizards >> Service Activation Wizard, wait for the router to connect to MyVigor server, then tick DT-DDNS and I have read and accept the above Agreement, click Next.

2. Confirm the information, then click Activate.

3. MyVigor server will reply with the service activation information.

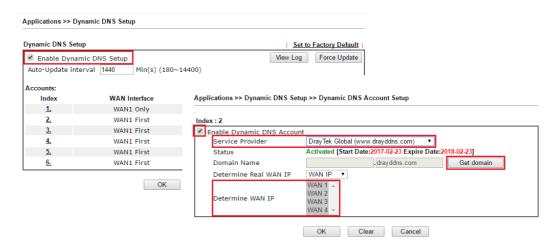

DrayTek Service Activation

Service Name	Start Date	Expire Date	Status
Web Content filter			Not Activated
APP Enforcement			Not Activated
DDNS	2017-02-23	2018-02-23	DT-DDNS

Please check if the license fits with the service provider of your signature. To ensure normal operation for your router, update your signature again is recommended.

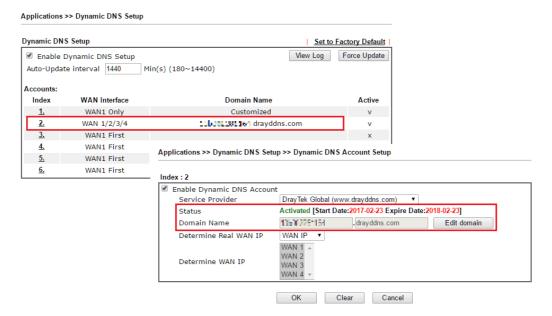

Configure DDNS Profile

- 1. Go to Applications >> Dynamic DNS Setup,
 - a. Tick Enable Dynamic DNS Setup
 - b. Click an available profile index
 - c. Tick Enable Dynamic DNS Account
 - d. Select DrayTek Global (www.drayddns.com) as Service Provider
 - e. Select the WAN you would like to upload the IP to DDNS server
 - f. Click Get domain
 - g. Click OK on the pop up notification window

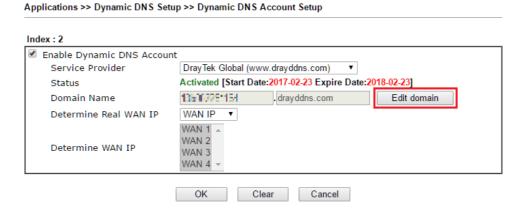

2. Wait few seconds for router to get the domain name, then, we can click the profile to check the information of license and domain name.

Modify Domain Name

Currently, only the domain name is allowed to be modified MyVigor website. We will need to register the router to MyVigor server, and log in to MyVigor website to modify it.

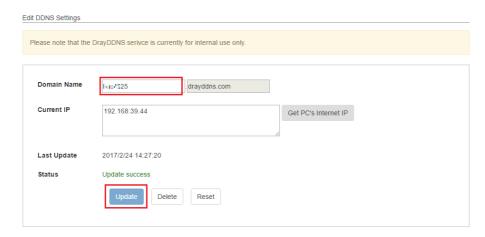

1. Please visit https://myvigor.draytek.com/ or go to Applications >> Dynamic DNS Setup >> DrayDDNS profile and click Edit domain.

2. Log in to MyVigor Website, choose the profile, then click Edit DDNS settings.

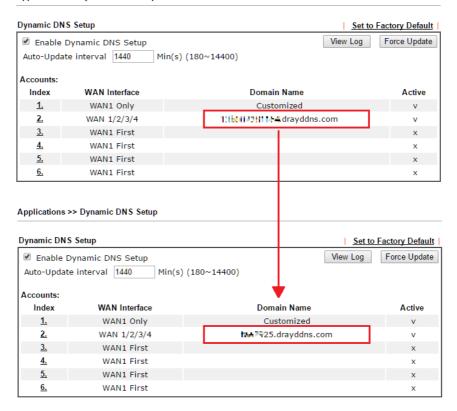

3. Input the desired Domain name (e.g., XXXX25) and click Update.

4. Vigor router will get the modified domain name when the it performs next DDNS updating. We can click Sync domain to accelerate this process.

dex : 2			
Enable Dynamic DNS Acc	ount		
Service Provider	DrayTek Global (w	/ww.drayddns.com) ▼	
Status	Activated [Start Date:2017-02-23 Expire Date:2018-02-23]		
Domain Name	135302261104	. drayddns.com	Sync domain
WAN Interfaces	WAN IP ▼		
Determine WAN IP	WAN 1 A WAN 2 WAN 3 WAN 4 Y		

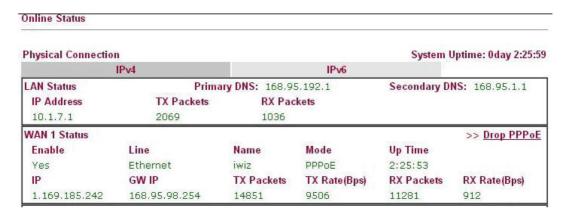

After few seconds, the router will get the new domain name and print it on the profiles list.

A-2 How to Configure Customized DDNS?

This article describes how to configure customized DDNS on Vigor routers to update your IP to the DDNS server. We will take "Changeip.org" and "3322.net" as example. Before setting, please make sure that the WAN connection is up.

Part A: Changeip.org

Note that.

Username: jo***
Password: jo*******

Host name: j*****.changeip.org WAN IP address: 1.169.185.242

Following is the screenshot of editing the HTML script on the browser to update your IP to the DDNS server.

Now we have to configure the router so it can do the same job for us automatically.

1. Please go to Applications >> Dynamic DNS to create a profile for customized DDNS client.

Applications >> Dynamic DNS Setup >> Dynamic DNS Account Setup

Enable Dynamic DNS	Account	
WAN Interface	WAN1 First ▼	
Service Provider	User-Defined	▼
Provider Host	changeip.org	
Service API	/dynamic/dns/update.asp? u=jo the sp=jo thost md=update&offline=0	name=j
Auth Type	basic ▼	
Connection Type	Http ▼	
Server Response		
Login Name	chronic6653	(max. 64 characters)
Password	**********	(max. 23 characters)
Wildcards		
Backup MX		
Mail Extender		

- Set the Service Provider as User-Defined. 2.
- Set the Service API as: /dynamic/dns/update.asp?u=jo***&p=jo*******&hostname=j****.changeip.org&ip=##IP ### &cmd=update&offline=0

In which, ###IP### is a value which will be replaced with the current interface IP address automatically when DDNS service is running. In this case the IP will be 1.169.185.242.

After setting, the Customized DDNS service will be up, and our IP will be updated to the DDNS server.

Part B: 3322.net

WAN 1 Link Status : Connected MAC Address : 00-50-7F-C8-C6-A1 Connection : PPPoE IP Address : 111.243.178.53 Default Gateway : 168.95.98.254 : 168.95.192.1 Primary DNS Secondary DNS : 168.95.1.1

Username: bi****** Password: 88******

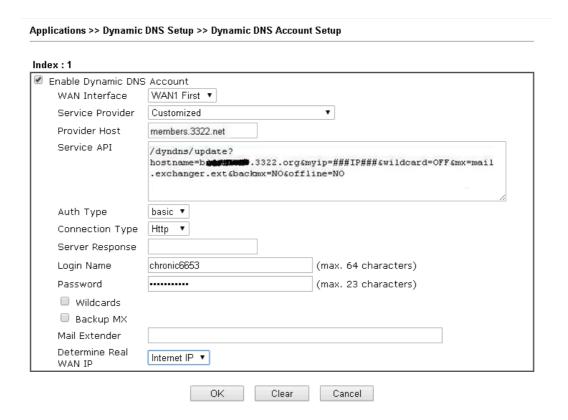

Host name: bi******.3322.org WAN IP address: 111.243.178.53 To update the IP to the DDNS server via editing the HTML script, we can Enter the following script on the browser:

"good 111.243.178.53" means our IP has been updated to the server successfully.

Now we have to configure the router so it can do the same job for us automatically.

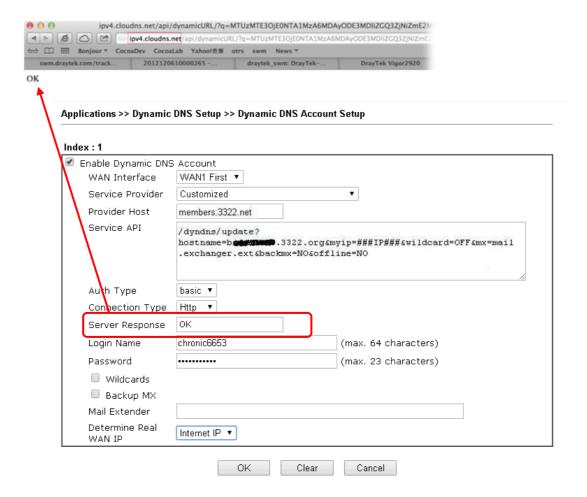

1. Please go to Applications >> Dynamic DNS to create a profile for Customized DDNS client.

- 2. Set the Service Provider as User-Defined.
- 3. Set the Provider Host as member.3322.net.
- 4. Set the Service API as: /dyndns/update?hostname=yourhost.3322.org&myip=###IP###&wildcard=OFF&mx=mail. exchanger.ext&backmx=NO&offline=NO
- 5. Enter your account and password.
- 6. After the setting, the Customized DDNS service will be up, and our IP will be updated to the DDNS server automatically.

Part C: Extend Note

The customized Service Provider is also eligible with the ClouDNS.net.

II-6 Routing

Route Policy (also well known as PBR, policy-based routing) is a feature where you may need to get a strategy for routing. The packets will be directed to the specified interface if they match one of the policies. You can setup route policies in various reasons such as load balance, security, routing decision, and etc.

Through protocol, IP address, port number and interface configuration, Route Policy can be used to configure any routing rules to fit actual request. In general, Route Policy can easily reach the following purposes:

Load Balance

You may manually create policies to balance the traffic across network interface.

Specify Interface

Through dedicated interface (WAN/LAN/VPN), the data can be sent from the source IP to the destination IP.

Address Mapping

Allows you specify the outgoing WAN IP address (es) for an internal private IP address or a range of internal private IP addresses.

Priority

The router will determine which policy will be adopted for transmitting the packet according to the priority of Static Route and Route Policy.

Failover to/Failback

Packets will be sent through another Interface or follow another Policy when the original interface goes down (Failover to). Once the original interface resumes service (Failback), the packets will be returned to it immediately.

Other routing

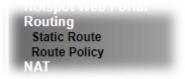

Specify routing policy to determine the direction of the data transmission.

Info

For more detailed information about using policy route, refer to Support >>FAQ/Application Note on www.draytek.com.

Web User Interface

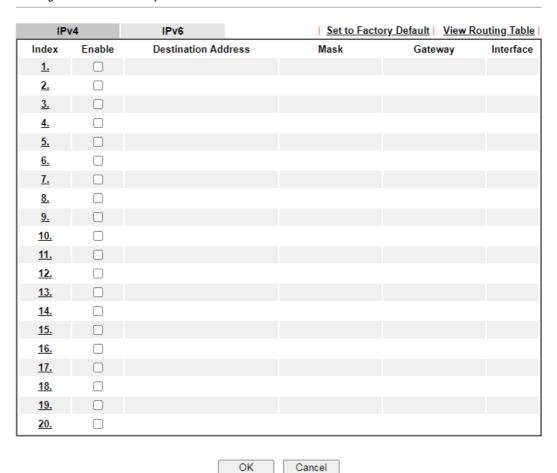

II-6-1 Static Route

Go to Routing >> Static Route. You can create static routes so that traffic to specific IP addresses go through a particular LAN or WAN.

The Static Route Setup screen has separate tabs for IPv4 and IPv6. Select the appropriate tab to begin.

Static Route for IPv4

Routing >> Static Route Setup

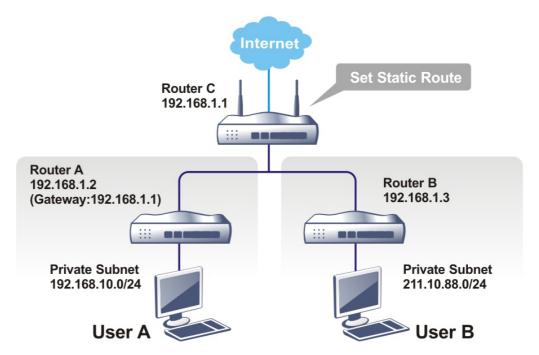

Item	Description		
Set to Factory Default	Clear all of the settings and return to factory default settings.		
Viewing Routing Table	Displays the routing table for your reference. Diagnostics >> View Routing Table IPv4 Routing Table Refresh Key Destination Gateway Interface C~ 192.168.1.0/ 255.255.255.0 directly connected LAN1 Key C: Connected S: Static R: RIP **: default ~: private B: BGP IPv6 Routing Table Show Detail Refresh Destination Interface Flags Metric Next Hop		
Index	The number (1 to 40) under Index allows you to open next		
Fueble	page to set up static route.		
Enable	Enables or disables the static route.		
Destination Address	Beginning destination address.		
Mask	Subnet mask of the destination address.		
Gateway	IP address of the gateway, which is the host that the traffic needs to go through to reach the destination.		
Interface	The LAN or WAN that should be used to contact the gateway.		
Backup	Click it to backup the configuration of static route settings.		
Restore	Click it to restore the configuration of static route settings. Before clicking, make sure upload the configuration file onto Vigor router.		

Add Static Routes to Private and Public Networks

Here is an example (based on IPv4) of setting Static Route in Main Router so that user A and B locating in different subnet can talk to each other via the router. Assuming the Internet access has been configured and the router works properly:

- use the Main Router to surf the Internet.
- create a private subnet 192.168.10.0 using an internal Router A (192.168.1.2)
- create a public subnet 211.100.88.0 via an internal Router B (192.168.1.3).
- have set Main Router 192.168.1.1 as the default gateway for the Router A 192.168.1.2.

Before setting Static Route, user A cannot talk to user B for Router A can only forward recognized packets to its default gateway Main Router.

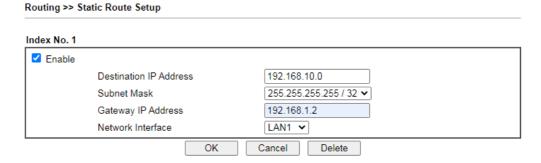

1. Go to LAN page and click General Setup, select 1st Subnet as the RIP Protocol Control. Then click the OK button.

Info

There are two reasons that we have to apply RIP Protocol Control on 1st Subnet. The first is that the LAN interface can exchange RIP packets with the neighboring routers via the 1st subnet (192.168.1.0/24). The second is that those hosts on the internal private subnets (ex. 192.168.10.0/24) can access the Internet via the router, and continuously exchange of IP routing information with different subnets.

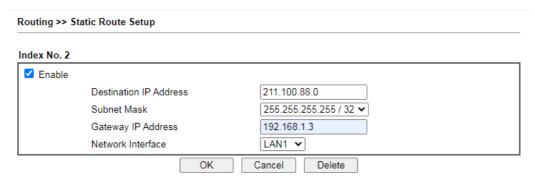

2. Click the LAN >> Static Route and click on the Index Number 1. Check the Enable box. Please add a static route as shown below, which regulates all packets destined to 192.168.10.0 will be forwarded to 192.168.1.2. Click OK.

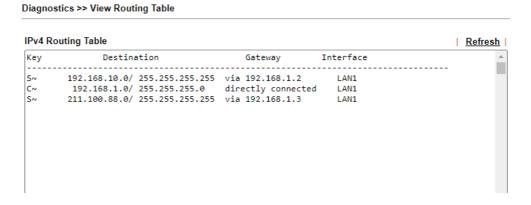

Available settings are explained as follows:

Item	Description
Enable	Enables or disables the static route.
Destination IP Address	Beginning destination address. Enter an IP address as the destination of the static route.
Subnet Mask	Subnet mask of the destination address. Enter the subnet mask for the static route.
Gateway IP Address	Enter the IP address of the gateway, which is the host that the traffic needs to go through to reach the destination.
Network Interface	Use the drop down list to specify an interface for such static route. The LAN or WAN that should be used to contact the gateway.

3. Return to Static Route Setup page. Click on another Index Number to add another static route as show below, which regulates all packets destined to 211.100.88.0 will be forwarded to 192.168.1.3. Click OK.

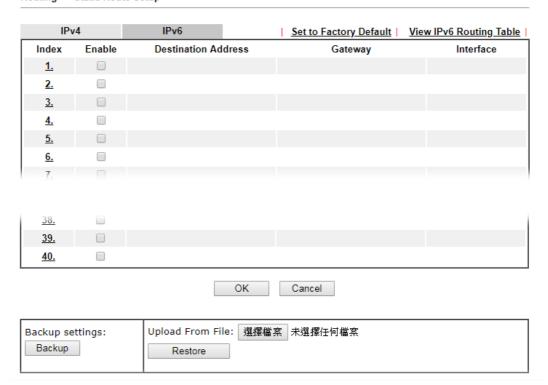

4. Go to Diagnostics and choose Routing Table to verify current routing table.

Static Route for IPv6

You can set up to 40 profiles for IPv6 static route. Click on a route index on the IPv6 tab to configure an IPv6 static route.

Routing >> Static Route Setup

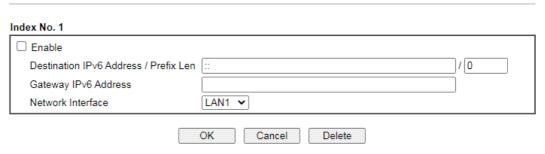

Available settings are explained as follows:

Item	Description
Index	The number (1 to 40) under Index allows you to open next page to set up static route.
Enable	Enables or disables the static route.
Destination Address	Beginning destination address.
Gateway	IP address of the gateway, which is the host that the traffic needs to go through to reach the destination.
Interface	The LAN or WAN that should be used to contact the gateway.
Set to Factory Default	Clear all of the settings and return to factory default settings.
Viewing IPv6 Routing Table	Displays the routing table for your reference.
Backup	Click it to backup the configuration of static route settings.
Restore	Click it to restore the configuration of static route settings. Before clicking, make sure upload the configuration file onto Vigor router.

Click any underline of index number to get the following page.

Routing >> Static Route Setup

Available settings are explained as follows:

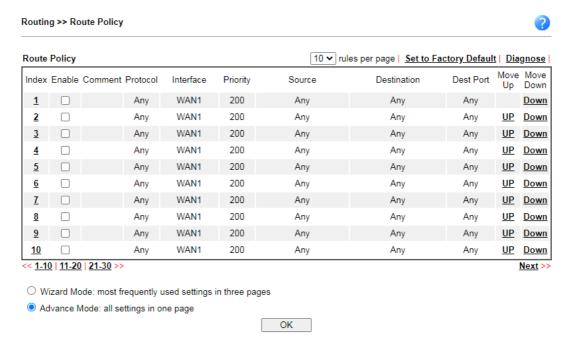

Item	Description
Enable	Enables or disables the static route.
Destination IPv6 Address / Prefix Len	Beginning destination address and the number of bits in the subnet mask of the destination IPv6 address.
	Enter the IP address with the prefix length for this entry.
Gateway IPv6 Address	IP address of the gateway, which is the host that the traffic needs to go through to reach the destination.
Network Interface	The LAN or WAN that should be used to contact the gateway.

When you finish the configuration, please click OK to save and exit this page.

II-6-2 Route Policy

The Route Policy feature gives you control over how different types of outbound traffic are routed, through any of the LANs, WANs or VPNs. The policy set in Route Policy always has higher priority than Default Route and Auto Load Balance set in WAN >> Internet Access, and always has lower priority than the Firewall Rules. Administrator may also define a priority to this policy.

To add, delete or modify load balance or route policies, select Routing >> Route Policy from the menu bar.

Item	Description
Rules per page	The number of rules to display on a single page.
Set to Factory Default	Clear the settings of all Load-Balance and Route Policy rules.
Index	Rule index. Click to bring up the configuration page of the rule.
Enable	Select to enable this rule.
Protocol	Protocol(s) to which this rule applies.
Interface	LAN, IP Routed Subnet, WAN or VPN interface that the traffic described by this rule is to be directed.
Priority	The priority of this rule.
Source	The beginning and ending source IP address.
Destination	The beginning and ending destination IP address.
Dest Port	The beginning and ending destination port number.
Move UP/Move Down	Click to shift priority of rule up/down by one.
Wizard Mode	The setup wizard will present the most-commonly used rule settings in three steps.

Advance Mode	All the rule settings will be shown on one configuration
	page.

If Wizard Mode is selected, you will be guided through the configuration process in three steps. Only the most commonly used settings will be shown.

- 1. Click the Wizard Mode radio button.
- 2. Click Index 1. The setting page will appear as follows:

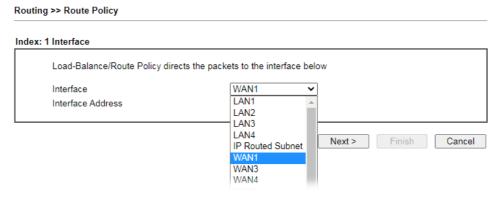

Routing >> Load-Balance/Route Policy

Available settings are explained as follows:

Item	Description
Source IP	Source IP addresses to which this rule is to be applied. Any - This rule applies to all source IP addresses. Src IP Start, Src IP End - This rule applies to the specified
	range of source IP addresses. If there is only one source IP address, enter the address in both the Start and End fields.
Destination IP	Destination IP addresses to which this rule is to be applied. Any - This rule applies to all destination IP addresses. Dest IP Start, Dest IP End - This rule applies to the specified range of destination IP addresses. If there is only one destination IP address, enter the address in both the Start and End fields. Country Object - Specify a country object. All the IPs
	coming from the country (countries) specified in the object will be passed through the WAN interface.

3. Click Next to get the following page.

Item	Description
Interface	You can select an interface from one of the following: WAN, LAN, VPN, IP Routed Subnet, and DMZ Subnet. Packets match with the above criteria will be transferred to the interface chosen here. Select an interface from the list.

4. Specify an interface and click Next. The following page will appear only if you choose WAN1 ~WAN7 as Interface.

Available settings are explained as follows:

Item	Description
Force NAT /Force Routing	It determines which mechanism that the router will use to forward the packet to WAN.

5. After choosing the mechanism, click Next to get the summary page for reference.

Load-Balance/Route Policy

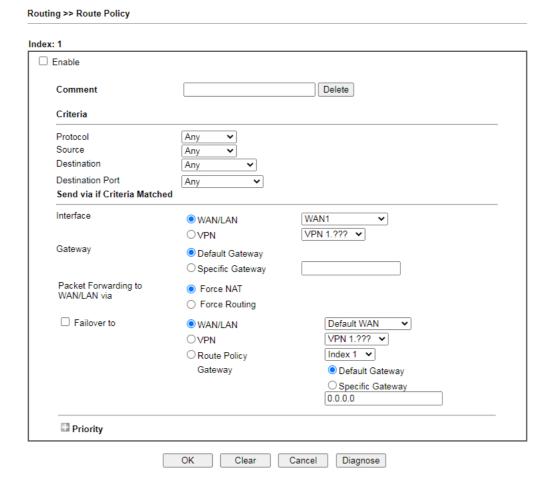

Index: 1 Configuration Summary

6. If there is no error, click Finish to complete wizard setting. To make changes, click Back to return to the previous pages. To discard all changes, click Cancel.

If Advance Mode is selected, you will be presented with a single page with all the configurable settings for the rule.

- 1. Click the Advance Mode radio button.
- 2. Click Index 1 to access into the following page.

Item	Description
Enable	Select to enable rule and unlock all fields for configuration.
Comment	Type a brief explanation for such profile.
Criteria	Router examines outgoing LAN traffic to find the first rule whose criteria are satisfied.
	Protocol - Use the drop-down menu to choose a proper protocol for the WAN interface.
	Source - Source IP addresses to which this rule is to be applied.
	Any - This rule applies to all source IP addresses.
	 IP Range -This rule applies to the specified range of source IP addresses.
	 Start - Enter an address as the starting IP for such profile.
	 End - Enter an address as the ending IP for such profile.
	IP Subnet - This rule applies to source IP addresses defined by the specified network IP address and

subnet mask.

- Network Enter an IP address here.
- Mask Use the drop down list to choose a suitable mask for the network.
- IP Object / IP Group Use the drop down list to choose a preconfigured IP object/group.

Destination - Destination IP addresses to which this rule is to be applied.

- Any This rule applies to all source IP addresses.
- IP Range -This rule applies to the specified range of destination IP addresses.
 - Start Enter an address as the starting IP for such profile.
 - End Enter an address as the ending IP for such profile.
- IP Subnet This rule applies to destination IP addresses defined by the specified network IP address and subnet mask.
 - Network Enter an IP address here.
 - Mask Use the drop down list to choose a suitable mask for the network.
- Domain Name Specify a domain name as the destination.
 - Select Click it to choose an existing domain name defined in Objects Setting>>String Object.
 - Delete Remove current used domain name.
 - Add Create a new domain name as the destination.
- IP Object / IP Group Use the drop down list to choose a preconfigured IP object/group.
- Country Object Use the drop dwon list to choose a preconfigured object. Then all IPs within that country will be treated as the destination IP.

Destination Port - Destination port numbers to which this rule is to be applied. As only TCP and UDP protocols use port numbers, this setting does not apply to the ICMP protocol.

- Any This rule applies to all destination ports.
- Dest Port Range This rule applies to the specified range of destination ports.
 - Start Enter the destination port start for the destination IP.
 - End Enter the destination port end for the destination IP. If this field is blank, it means that all the destination ports will be passed through the WAN interface.

Send via if criteria matched

If criteria are matched, the traffic will be sent to the designated interface and gateway.

Interface - Packets match with the above criteria will be transferred to the interface chosen here. Select an interface from the list (WAN/LAN: A WAN or LAN interface; VPN: A Virtual Private Network).

Gateway - Select a gateway.

Default Gateway - Traffic will be sent to the default

gateway address of the specified interface.

 Specific Gateway - Traffic will be sent to the specified gateway address instead of the default gateway address.

Packet Forwarding to WAN/LAN via - When you choose LAN/WAN (e.g., WAN1) as the Interface for packet transmission, you have to specify the way the packet forwarded to.

- Force NAT The source IP address will not be used to connect to the remote destination. Network Address Translation (NAT) will be used, where a common IP address will be used.
- Force Routing The source IP address will be preserved when connecting to the remote destination.

Failover to - If the interface specified above loses connection, traffic can be forwarded to an alternate interface or be scrutinized by an alternate route policy.

- WAN/LAN Use the drop down list to choose an interface as an auto failover interface.
- VPN Use the drop down list to choose a VPN tunnel as a failover tunnel.
- Route Policy Use the drop down list to choose an existed route policy profile.
- Gateway IP The failed-over traffic can be sent to the Default Gateway of the alternate interface/route policy, or a Specific Gateway at the specified IP address.

Failback- When Failover to option is enabled, Administrator could also enable Failback to clear the existing session on Failover interface and return to the original interface immediately once the original interface resume its service. When Failback is not enabled, the router will only stop sending packets via the Failover interface when the existing sessions are cleared, and this might take a long time because some application will keep sending packet once a while. Therefore, Failback option is recommended if Administrator wants the traffic to go via the primary interface as soon as possible.

Priority

Specifies the priority of the rule in relation to other rules. Lowering the priority value increases the priority of the rule, and vice versa. Routes in the routing table have a priority value of 150, whereas the default routes have a priority value of 250.

The default priority value of Load Balance/Route Policy rules is 200. To change the priority, move the slider or enter a value.

3. When you finish the configuration, please click OK to save and exit this page.

Diagnose for Route Policy

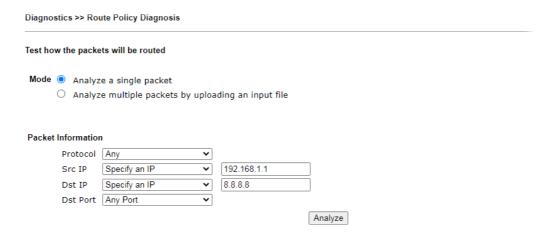

The Diagnose function allows you to determine how a specific type of traffic from a host to a destination will be routed, and which routes, route policies and load balance rules match the criteria of the traffic.

Click Diagnose.

Analyze a single packet

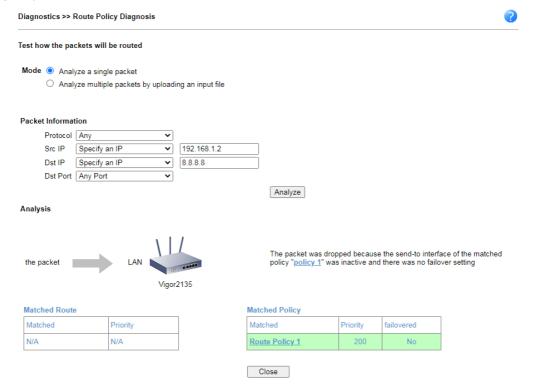

Select this mode to make Vigor router analyze how a single packet will be sent by a route policy.

Item	Description
Packet Information	Specify the nature of the packets to be analyzed by Vigor router.
	Protocol - Specify a protocol for diagnosis.
	Src IP - IP address of host where the traffic originates.
	Specify an IP - One source IP address.
	 Any IP- Source IP address is not specified. Any IP from LAN 1/LAN 2/LAN 3/LAN 4.
	 Subnet/IP Routed Subnet - Any source IP address on the specified subnet.
	Dst IP - IP address of the destination host.
	 Specify an IP - One destination IP address.
	Any IP - Destination IP address is not specified.
	Dst Port - Number of port to which the traffic is sent. This setting is only applicable to UDP and TCP protocols. Use the drop down list to specify the destination port.

Analyze - Click to analyze and display routes, route policies and load balance rules with matching criteria. If required, click export analysis to export the result as a file.

The following shows an analysis example. The packet matched the criteria of one route policy.

Analyze multiple packets by uploading an input file

Item	Description
Input File	Browse - Click to browse folder structure and select an input file.
	Download and example input file - Click to download a sample input file (blank ".csv" file). Then, click the Browse button to select that blank ".csv" file for saving the result of analysis.

Analyze - After selecting input file, click to start the analysis process. Click the export button to export the result as a file.

Note that the analysis was based on the current "load-balance/route policy" settings, we do not guarantee it will be 100% the same as the real case.

The following shows the analysis of the sample input file. The matched routes and policies are highlighted in green. The Final Result column shows the outcome.

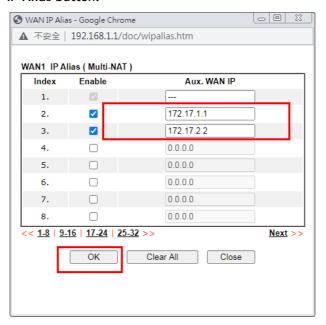

Application Notes

A-1 How to set up Address Mapping with Route Policy?

Address Mapping is used to map a specified private IP or a range of private IPs of NAT subnet into a specified WAN IP (or WAN IP alias IP). Refer to the following figure.

This document introduces how to set up address mapping with Route Policy. When a WAN interface has multiple public IP addresses, Administrator may specify the outgoing IP for certain internal IP address by a Route Policy.

 Set up WAN IP Alias. Go to WAN >> Internet Access >> Details Page, and click on WAN IP Alias button.

- Check Enable.
- Enter the WAN IP address.
- Click OK to save.

After setting up the WAN IP Alias, the IP addresses will be shown in the drop-down list of Interface in Route Policy setting.

2. Go to Routing>> Route Policy. Create a Route Policy for specific IP address to send from specific WAN IP Address.

- Enable this policy.
- Enter Source IP as the range of private IP address.
- Leave the Destination IP and Port as Any.
- Select Interface as WAN, and then select Interface address from the drop-down list. (The List can be edited in WAN IP Alias setting.)
- Enable Failover to other WAN so the traffic will be sent via other Interface when the path fails. But do not enable this option if you want the traffic only to use a designated IP address.
- Click OK to save.
- 3. After the above configuration, packet source from the range between 192.168.1.20 and 192.168.1.30 sent to the Internet will use the public IP 172.17.1.1.

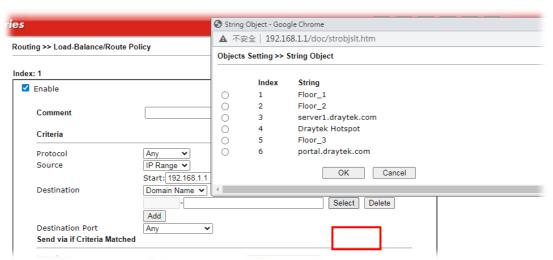

A-2 How to use destination domain name in a route policy?

Route Policy supports using a domain name as destination criteria. It provides a more direct way to set up route polices if the network administrator is trying to specify the gateway for the traffic that destined for a certain website.

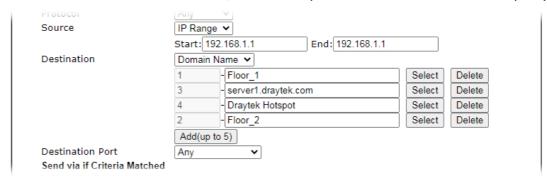

To use a destination domain name as criteria, just select Domain Name as Destination in Criteria, and enter the domain name in the empty field.

Criteria	
Protocol	Any 🕶
Source	IP Range ▼
	Start: 192.168.1.20 End: 192.168.1.30
Destination	Domain Name Y
	-server1.draytek.com Select Delete
	Add
Destination Port	Any
Send via if Criteria Mate	ched
T-4	

Or you may click Select, and use a string that is pre-defined in Objects Settings >> String Object as the domain name.

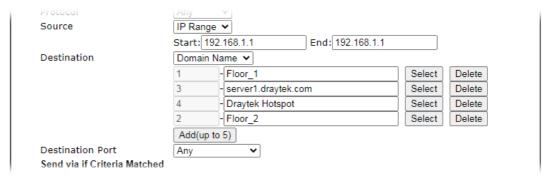

Click Add too add more domain names, we can set up to 5 domain names in one route policy.

Auto-create String Objects

If you manually enter the domain name in a route policy, after clicking OK to apply the route policy, those domain names will be given a number.

That means the router has automatically created string objects for those domain names, so that they can be used in other route policies or other functions.

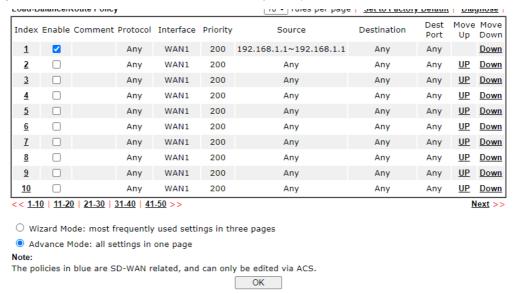

Objects Backup/Restore

A-3 Introduction to Route Policy

This document introduces the Route Policy. This feature allows network administrator to manage the outbound traffic more specifically.

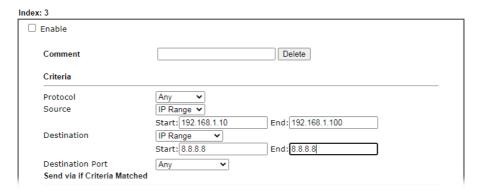

The Policy set in Route Policy always has higher priority than Default Route and Auto Load Balance set in WAN >> General Setup, and always has lower priority than the Firewall Rules. Administrator may also define a priority to this policy.

To configure Route Policy, go to Routing>> Route Policy. The following image is a screen-shot of Route policy page. It lists all the policies and shows whether the policy is enabled, what are the criteria to match, and through which the interface should the traffic to go if the criteria are matched, and also its priority.

To set up a Route Policy, just click on an Index number. At the bottom of the page, there are two configuration modes could be choose: the Wizard Mode provides a simple and basic configuration; while Advance Mode allows more options. Here we select Advance Mode.

1. First, set the criteria of the packets to apply this policy.

- a. Select a Protocol.
- b. Enter the Source IP address range, the Source IP could be a single address if the Start and End are the same.
- c. Enter the Destination IP address range.
- d. Select the Destination Port.

The above configuration is an example that if a packet is sent from 192.168.1.10~192.168.1.100 to 8.8.8.8, no matter what the protocol or destination port is, it will follow this route policy.

2. Next, we select an interface and gateway through which should the packet be sent if it matches the criteria.

- a. Select an Interface.
- b. Select a Gateway IP. Note that if Interface is chosen to be a LAN, it is necessary to designate a specific gateway.

The above configuration is an example that if a packet matches the criteria of this Route Policy, it will be sent to the default gateway then the destination through VPN1.

3. In Advance Mode, if the Interface is selected as WAN or VPN, there are some more options:

- Failover to: Enables packet to be sent through other Interface or follow another Policy when detects a path failure in the original interface. The above configuration indicates that the packets will be sent through WAN2 when the original route is disconnected.
- Failback: When "Failover to" option is enabled, Administrator could also enable "Failback" to clear the existing session on Failover interface and return to the original interface immediately once the original interface resume its service. When Failback is not enabled, the router will only stop sending packet via the Failover interface when the existing sessions are cleared, and this might take a long time because some application will keep sending packet once a while. Therefore, Failback option is recommended if Administrator want the traffic go via the primary interface as soon as possible.
- Priority: Administrator may set priority between 1 and 249 for this Route policy, where smaller number indicates higher priority. When two policies are having the same priority, the first (according to the policy index order) matched policy will be implemented.

This page is left blank.

Part III Wireless LAN

Wireless LAN enables high mobility so WLAN users can simultaneously access all LAN facilities just like on a wired LAN as well as Internet access.

III-1 Wireless LAN (2.4GHz/5GHz)

This function is available on wireless models only (models with -n or -ac suffixes).

In recent years, the market for wireless communications has enjoyed tremendous growth. Wireless technology now reaches virtually every location on earth. Billions of people exchange information daily with wireless communication products. The Vigor2135 series of wireless routers (with "n", "n-plus", or "ac" in the model name), designed with maximum flexibility and efficiency in mind, is ideal for use in a small office or home. In a business environment, any authorized personnel can bring a WLAN-equipped tablet, PDA or notebook into a meeting room and connect to the network without drilling holes through walls or tearing up flooring to lay a clot of LAN cabling. Wireless networking enables high mobility so WLAN users can access all LAN resources in the same manner just as they would on a wired LAN, but without the cables.

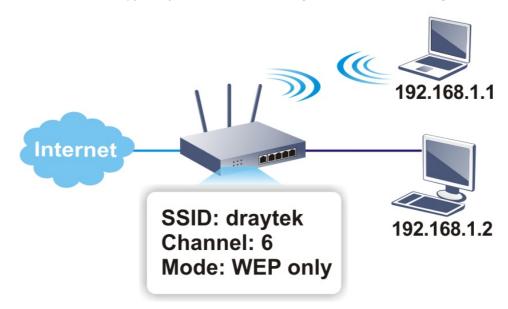

All Vigor2135 wireless routers support 2.4 GHz. ac models add support for 5 GHz frequencies. Channel operations of 20 and 40 MHz are possible on the 2.4 GHz spectrum, and 20, 40 and 80 MHz are supported on the 5 GHz spectrum.

Info

The actual data throughput will vary according to the network conditions and environmental factors, including volume of network traffic, network overhead and building materials.

In an Infrastructure Mode of wireless network, Vigor wireless router plays a role as an Access Point (AP) connecting to lots of wireless clients or Stations (STA). All the STAs will share the same Internet connection via Vigor wireless router. The wireless network settings, such as SSID, channels, encryption protocol, can be configured in General Settings.

Multiple SSIDs

Vigor wireless routers support up to four SSIDs (Service Set Identifiers) per band for wireless connections. A service set is a group of wireless network clients that have the same networking parameters. Each service set can be configured to have a unique name (SSID) and specific download and upload rates, and can be used by different categories of users.

Real-time Hardware Encryption

Vigor wireless routers are equipped with a hardware AES encryption engine to provide the most effective and efficient protection of wireless traffic, without sacrificing user experience.

Complete Security Standard Selection

To ensure the security and privacy of your wireless communication, we provide several prevailing standards on market.

WEP (Wired Equivalent Privacy) is a legacy method to encrypt each frame transmitted via radio using either a 64-bit or 128-bit key. Usually access point will preset a set of four keys and it will communicate with each station using only one out of the four keys.

WPA (Wi-Fi Protected Access), the most dominating security mechanism in industry, is separated into two categories: WPA-personal or called WPA Pre-Share Key (WPA/PSK), and WPA-Enterprise or called WPA/802.1x.

In WPA-Personal, a pre-defined key (PSK) is used to encrypt traffic during data transmission. WPA uses the Temporal Key Integrity Protocol (TKIP) for data encryption whereas WPA2 applies AES (Advanced Encryption Standard). A major advantage of WPA-Enterprise is that it supports not only encryption but also authentication.

You should select the appropriate security mechanism according to your needs. Because WEP has proven to be vulnerable to attacks, you should consider using WPA instead for the most secure connection. No matter which security suite you select, they all will enhance the over-the-air data protection and /or privacy on your wireless network. The Vigor wireless router is very flexible and can support multiple secure connections with both WEP and WPA at the same time.

Info

The default password (PSK) is listed on a label attached to the bottom of the router. Since anyone who has physical access to the router can discover the default password, you are strongly advised to change it.

Separate the Wireless and the Wired LAN- WLAN Isolation

WLAN Isolation allows you to separate wireless LAN clients from wired ones, either for the purpose of quarantining certain users, or restricting their access to LAN resources. When WLAN isolation is enabled on an SSID, its users will only be able to connect to the WAN (i.e., internet). This is ideal for providing visitors Internet access while keeping the wired network secure.

For the highest degree of security, you may consider adding firewall rules to filter access by MAC address.

Manage Wireless Stations - Station List

All stations on the wireless network and their connection status is shown here.

DFS Restrictions

In certain parts of the world, there are radar systems that are primary users of the 5 GHz band. WLAN equipment on the 5 GHz band is considered secondary users and must not cause interference to the primary users. By utilizing a feature called Dynamic Frequency Selection, the wireless router detects the presence of radar signals and relocates the wireless network to a clear channel. DFS channels vary by region, and we must obtain certification from the authorities before making them available for use on the Vigor router. We are working on DFS certification in Europe and will open up those channels by releasing new firmware once we pass certification. In Europe, these DFS channels will be made available 52, 56, 60, 64, 100, 104, 108, 112, 116, 120, 124, 128, 132, 136 and 140.

At this time, we have no plans to pursue DFS certification in the USA, so DFS channels will not be available in the foreseeable future. The U.S. DFS channels 52, 56, 60, 64, 100, 104, 108, 112, 116, 120, 124, 128, 132, 136 and 140 will not be available on routers sold in the United States.

In the rest of world, there are restrictions on DFS channels as well. Uncertified DFS channels will be unavailable for selection depending on the country code programmed in the router.

WPS

WPS (Wi-Fi Protected Setup) makes connecting wireless clients to wireless access points and routers a simple process.

III-1-1 Wireless Wizard

On Wi-Fi-equipped models, you can configure the wireless access point (AP) using the Wireless Wizard. The Host AP Configuration sets up SSID 1 for use by internal users, who are allowed to access both the LAN and the WAN (Internet), whereas the Guest AP Configuration sets up SSID 2 for use by visitors, who are allowed only WAN access and whose access speeds can optionally be throttled.

The Wireless Wizard allows you to quickly configure a host SSID (for internal use, such as in a home or business environment), and optionally a guest SSID (for wireless clients that are restricted to Internet access only, typically used by visitors).

Follow the steps listed below:

- 1. On the menu bar, click on Wizards, and then Wireless Wizard.
- 2. The Host AP Configuration page appears. This page sets up SSID 1 for use by internal users. SSID 1 configured using the wizard will have no access speed throttling (by means of the Rate Control feature), and both the LAN and the WAN will be accessible.

Host AP Configuration

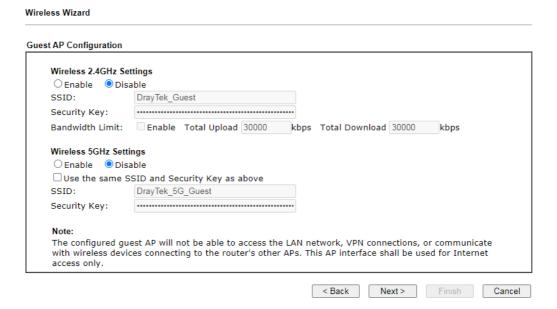

Name: Mode:	DrayTek Mixed(11b+11g+11n) ✓
Channel:	Channel 6, 2437MHz
Security Key:	
	SID and Security Key as above
Name:	DrayTek_5G

Channel:	Channel 36, 5180MHz ▼
Security Key:	•••••
Note:	

Item	Description
Wireless 2.4GHz Set	ttings
Name	Service Set Identification (SSID), which shows up as the AP identifier. Maximum length is 32 characters.
Mode	Allowed Wi-Fi modes.
	802.11b is the original Wi-Fi mode on the 2.4 GHz band and supports raw data rates up to 11 Mbit/s.
	802.11g allows for enhanced throughput up to 54 Mbit/s. 802.11n provides throughput up to 300 MHz.
	Available selections are
	• 11b Only
	• 11g Only
	• 11n Only (2.4 GHz)
	• Mixed(11b+11g)
	Mixed(11g+11n)
	Mixed(11b+11g+11n)
	The selections labeled "Mixed" enable multiple simultaneously-active modes.
Channel	Wi-Fi channel used for this SSID. If set to Auto, the router uses the best available channel.
Security Key	The Pre-shared Key (PSK) used by WPA2/PSK (Wireless Protected Access 2/Pre-shared Key) to encrypt wireless traffic. The key is composed of 8 to 63 ASCII characters. You may also specify the key using 64 hexadecimal digits, prefixed with the sequence 0x ("0x321253abcde").
Wireless 5GHz Setti	ngs
Use the same SSID and Security Key as	If selected, the SSID Name and Security Key from the 2.4 GHz section will be used.

above	
Name	Service Set Identification (SSID), which shows up as the AP identifier. Maximum length is 32 characters.
Mode	Allowed Wi-Fi modes.
	802.11a is the original Wi-Fi mode on the 5 GHz band and supports raw data rates up to 11 Mbit/s.
	802.11n enhances the throughput and provides up to 300 MHz.
	The newest standard, 802.11ac, can achieve 1.3 Gbit/s of data throughput on the 5 GHz band.
	Available selections are
	• 11a Only
	• 11n Only (5GHz)
	• Mixed(11a+11n)
	• Mixed(11a+11n+11ac)
	The selections labeled "Mixed" enable multiple simultaneously-active modes.
Channel	Wi-Fi channel used for this SSID. If set to Auto, the router uses the best available channel.
Security Key	The Pre-shared Key (PSK) used by WPA2/PSK (Wireless Protected Access 2/Pre-shared Key) to encrypt wireless traffic. The key is composed of 8 to 63 ASCII characters. You may also specify the key using 64 hexadecimal digits, prefixed with the sequence 0x ("0x321253abcde").
Next	Click it to get into the next setting page.
Cancel	Exit the wireless wizard without saving any changes.

3. Click Next to proceed to the Guest AP Configuration page. The Guest AP Configuration page appears. This page sets up SSID 2 for use by guest users. SSID 2 configured using the wizard can optionally be set up with access speed throttling (by means of the Rate Control feature), and only the WAN (the Internet) will be accessible.

SSID 2 shares the same Mode and Channel settings as SSID 1 configured on the previous page.

User-configurabe Item	Description		
Wireless 2.4GHz Settings			
Enable/Disable	Enable or disable the SSID for guest use.		
SSID	Service Set Identification (SSID), which shows up as the AP identifier. Maximum length is 32 characters.		
Security Key	The Pre-shared Key (PSK) used by WPA2/PSK (Wireless Protected Access 2/Pre-shared Key) to encrypt wireless traffic. The key is composed of 8 to 63 ASCII characters. You may also specify the key using 64 hexadecimal digits, prefixed with the sequence 0x ("0x321253abcde").		
Bandwidth Limit	Enable - Check the box to set the bandwidth limit for data transmission in upload and download.		
	It controls the data transmission rate through wireless connection.		
	Total Upload - Check Enable and Enter the transmitting rate for data upload. Default value is 30,000 kbps.		
	Total Download - Enter the transmitting rate for data download. Default value is 30,000 kbps.		
Wireless 5GHz Settings	8		
Enable/Disable	Click it to enable or disable settings in this page.		
Use the same SSID and Security Key as above	If selected, the SSID Name and Security Key from the 2.4 GHz section will be used.		
SSID	Service Set Identification (SSID), which shows up as the AP identifier. Maximum length is 32 characters.		
Security Key	The Pre-shared Key (PSK) used by WPA2/PSK (Wireless Protected Access 2/Pre-shared Key) to encrypt wireless traffic. The key is composed of 8 to 63 ASCII characters. You may also specify the key using 64 hexadecimal digits, prefixed with the sequence 0x ("0x321253abcde").		
Next	Click it to get into the next setting page.		
Cancel	Exit the wireless wizard without saving any changes.		

4. Click Next to proceed to the Configuration Summary page. The Configuration Summary page displays all the settings you have entered.

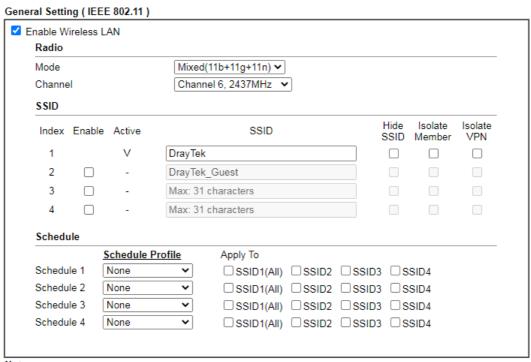

5. Click Finish to save the settings, Back to make changes, or Cancel to exit the wizard without saving the settings.

III-1-2 General Setup

The Wireless LAN>>Genera Setup section lets you configure the most basic settings of your wireless network, including the SSIDs, WLAN channels and bandwidth control.

Wireless LAN (2.4 GHz) >> General Setup

Note:

- 1. Isolate Member: Prevent the clients associated with this SSID from accessing each other.
- Isolate VPN: Block the wireless clients from accessing the VPN network and prevent wireless traffic being sent to VPN connections.
- 3. Only the action "Force Down" in the Schedule Profile will be applied to WLAN, other actions will be ignored.

Item	Description
Enable Wireless LAN	Check the box to enable wireless function.
Mode	Select the 802.11 mode allowed on the band.
	On the 2.4 GHz band, the following wireless mode options are available:
	• 11b Only
	• 11g Only
	• 11n Only (2.4 GHz)
	 Mixed (11b+11g)
	• Mixed (11g+11n)
	 Mixed (11b+11g+11n)
	On the 5 GHz band on ac models (2135ac and 2135Vac), the following options are available:
	• 11a Only
	• 11n Only (5 GHz)
	• Mixed (11a+11n)

	• Mixed (11a+11n+11ac)	
Channel	Allows you to specify a particular wireless channel to use, or let the system determine the optimal channel by selecting "Auto". The list of available channels varies depending on the locale for which the router is intended.	
SSID	Service Set Identification (SSID), which shows up as the AP identifier. Maximum length is 32 characters.	
Hide SSID	Select to keep SSIDs from showing up when scans are performed by wireless clients, which makes it harder for unauthorized clients or STAs to join your wireless LAN. Depending on the wireless client and software used, the user may see only an AP listed without the SSID, or the AP might not even show up.	
Isolate	Member - Check this box to disallow communication between wireless clients (stations) on the same SSID. VPN - Check this box to block wireless clients (stations) from accessing VPN clients.	
Schedule Profile	Set the wireless LAN to be disabled at certain time intervals. You may choose up to 4 schedules out of the 15 schedules defined in Applications >> Schedule. Only "Force Down" schedule profiles take effect, and the wireless function will be turned off for the duration of the profile. The default setting is blank for all schedules, meaning wireless function will always work.	
Apply To	Selected SSID (2 /3 /4) will be forced up /down based on the schedule profile used. Schedule Schedule Profile Schedule 1 None	

To save changes on the General Settings page, select OK; to discard changes, select Cancel.

III-1-3 Security

Every router has a default wireless password (PSK) which is provided on a label attached to the bottom of the router. For the wireless client who wants to access into Internet through such router, please input the default PSK value for connection.

For extra security you can set your own wireless password by clicking the Wireless LAN>>Security Settings entry on the Web User Interface. Each of the 4 SSIDs can be configured independently using their own tab page.

Wireless LAN(2.4 GHz) >> Security Settings

Available settings are explained as follows:

Item	Description
Mode	This dialog box lists all available security modes.

Cancel

OK

Info

You should also set <u>RADIUS Server</u> simultaneously if 802.1x mode is selected.

Disable - Encryption mechanism is disabled.

WEP - Allow only connections from WEP clients. Encryption key should be entered in the WEP Key section.

WEP/802.1x Only - Accepts only WEP clients and the encryption key is obtained dynamically from RADIUS server with 802.1X protocol.

Allow only connections from WEP clients. Encryption key is obtained from a RADIUS server using the 802.1X protocol.

WPA/802.1x Only - Allow only connections from WPA clients. Encryption key is obtained from a RADIUS server using the 802.1X protocol.

WPA2/802.1x Only- Allow only connections from WPA2 clients. Encryption key is obtained from a RADIUS server using the 802.1X protocol.

Mixed (WPA+WPA2/802.1x only) - Allow connections from both WPA and WPA2 clients. Encryption key is obtained from a RADIUS server using the 802.1X protocol.

WPA/PSK - Allow connections only from WPA clients. Encryption key should be entered in the PSK field.

WPA2/PSK - Allow connections only from WPA2 clients. Encryption key should be entered in the PSK field.

Mixed (WPA+ WPA2)/PSK - Allow connections from both WPA and WPA2 clients. Encryption key should be entered in the PSK field.

WPA3/SAE - Allow connections only from WPA3 clients. All transmitted data will be encrypted with authentication by using SAE (simultaneous authentication of equals).

Mixed (WPA2+ WPA3)/SAE - Allow connections from both WPA2 and WPA3 clients. It is compatible with devices supporting WPA2/PSK.

OWE - It stands for Opportunistic Wireless Encryption. All transmitted data will be encrypted without passing authentication.

WPA

WPA encrypts each frame transmitted from the radio using the key, which is either entered in the PSK (Pre-Shared Key) field, or or automatically negotiated via 802.1x

	authentication from a RADIUS server.	
	Pre-Shared Key (PSK) - Enter 8-63 ASCII characters, for example, "012345678", or 64 hexadecimal digits with a leading "0x", for example, "0x321253abcde".	
	Password Strength - The system will display the strength of the password, indicated by the words "weak", "medium" or "strong".	
WEP	WEP keys can either be 64-bit or 128-bit.	
	64-Bit - Either 5 ASCII characters, for example "12345", or 10 hexadecimal digitals with a leading "0x", such as "0x4142434445".	
	128-Bit - Either 13 ASCII characters, for example "ABCDEFGHIJKLM", or 26 hexadecimal digits with a leading "0x", for example "0x4142434445464748494A4B4C4D".	
	Up to four keys can be entered here, but only one key can be selected at any time. The keys can be entered in ASCII or Hexadecimal.	
	All wireless devices intending to connect to the same SSID must support the same WEP encryption bit size and have the same key.	

To save changes on this page, select OK; to discard changes, select Cancel.

III-1-4 Access Control

In the Access Control, the router may restrict wireless access to certain wireless clients only by referencing a MAC address black or white list. The user may block wireless clients by inserting their MAC addresses into a black list, or only allow certain wireless clients to connect by inserting their MAC addresses into a white list.

In the Access Control web page, users may configure the white/black list modes used by each SSID and the MAC addresses applied to their lists.

Enable Mac Ad	dress Filter	☐ White Lis	t ∨ SSID1 DrayTek		
		☐ White Lis	st V SSID2 DrayTek_Gues	st	
			st v SSID3		
		☐ White Lis	st 🗸 SSID4		
		MAC Address Filter	(Max. 64 entries)		
Index	Attribute	MAC Address	Apply SSID	Comment	
					~
		MAC Address : :]:]	*
	Apply SSID : 🗌 S	SID 1 SSID 2 S	SID 3 SSID 4]	*
	Apply SSID : S		SID 3 SSID 4]	*
A	Apply SSID : St Attribute : S: Comment :	SID 1 SSID 2 S	SID 3 SSID 4		*
	Apply SSID : St Attribute : S: Comment :	SID 1 SSID 2 S Isolate the station from I	SID 3 SSID 4		*

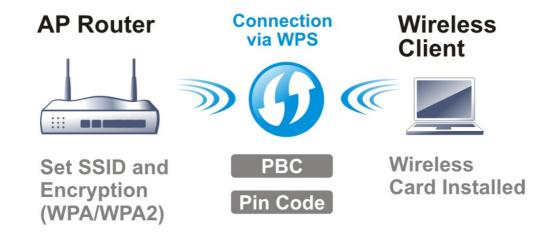

Item	Description
Enable Mac Address Filter	Select the SSIDs that you would like to have MAC Address filter enabled. Select White List or Black List in the combo box next to each enabled SSIDs.
	White List - Only allow wireless clients whose MAC addresses are listed in the MAC Address Filter list.
	Black List - Only allow wireless clients whose MAC addresses are not listed in the MAC Address Filter list.
MAC Address Filter	Displays all MAC addresses in the filter list.
Client's MAC Address	Manually enter the MAC address of wireless client.
Apply SSID	Select the SSIDs to which the above MAC address filter will be applied.
Attribute	s: Isolate the station from LAN - select to isolate the wireless client from LAN.
Comment	Enter a brief description for the specified client's MAC address.
Add	Add a new filter entry to the MAC Address filter list using the information entered above.
Delete	Delete the selected MAC address from the list.
Edit	Update the selected MAC address in the list using the information entered above.
Cancel	Clear the contents of all the above fields. This will discard all changes without saving to the MAC Address Filter list.
OK	Click to save the MAC Address Filter list.

Clear All	Remove all entries from the MAC Address Filter list.
Backup Access Control	Settings on this web page can be saved as a file which can be restored in the future by this device or other device.
Upload From File	Restore wireless access control settings and applied onto this device.

To save changes on this page, select OK.

III-1-5 WPS

WPS (Wi-Fi Protected Setup) provides an easy way to connect wireless to wireless access points and routers with WPA or WPA2 encryption.

Info

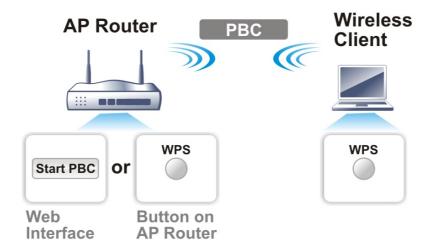

WPS works with wireless stations with WPS or WPS2 support. It does not work with WEP.

It is the simplest way to build connection between wireless network clients and vigor router. Users do not need to select any encryption mode and type any long encryption passphrase to setup a wireless client every time. He/she only needs to press a button on wireless client, and WPS will connect for client and router automatically.

There are two methods to do network connection through WPS between AP and Stations: pressing the *Start PBC* button or using *PIN Code*.

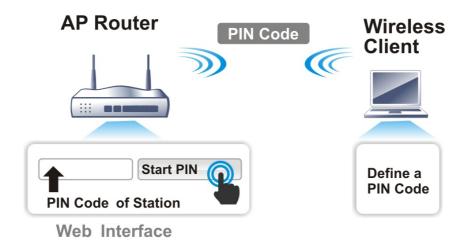

Using the PBC button

On the Vigor router, press and hold the WPS button on the front panel for 2 seconds, or click the Start PBC button on the Wireless LAN>>WPS page in the Web User Interface. On the wireless station (for example, a laptop computer), press the WPS/Start PBC button on the network card.

Using a PIN code

You may establish a wireless connection by entering a PIN code generated by a wireless client that supports WPS.

WPS is only supported when the encryption protocol is set to WPA-PSK or WPA2-PSK. If other protocols (such as WEP) have been selected in Wireless LAN>>Security, you will see the following message box:

Please click OK to dismiss dialog box, return to Wireless LAN>>Security and select WPA-PSK or WPA2-PSK mode before attempting to enable WPS again.

Below shows Wireless LAN>>WPS web page:

Wireless LAN(2.4GHz) >> WPS (Wi-Fi Protected Setup)

☑ Enable WPS 🗘

Wi-Fi Protected Setup Information

WPS Status	Configured
SSID	DrayTek
Authentication Mode	WPA2/PSK

Device Configure

Configure via Push Button	Start PBC
Configure via Client PinCode	Start PIN

Status: Ready

Note

WPS can help your wireless client automatically connect to the Access point.

□: WPS is Disabled.□: WPS is Enabled.

: Waiting for WPS requests from wireless clients.

Available settings are explained as follows:

Item	Description
Enable WPS	Check this box to enable WPS setting.
WPS Status	Displays system information related to WPS. The message "Configured" means that the wireless security (encryption) function of the router is properly configured and functioning properly.
SSID	Displays the SSID1. WPS is supported on SSID1 only.
Authentication Mode	Displays the current authentication mode of the router.
Configure via Push Button	Click Start PBC to invoke Push-Button style WPS setup procedure. The router will wait for about 2 minutes for WPS connection requests from wireless clients. The WPS LED on the router will blink fast when WPS is in progress, and will return to normal condition after two minutes.
Configure via Client PinCode	Enter a PIN code, and click the Start PIN button. The WPS LED on the router will blink rapidly when WPS is in progress, for up to 2 minutes or until a successful WPS connection from a wireless client has been established.

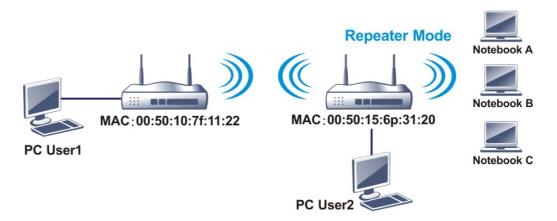

III-1-6 WDS (for 5GHz)

Wireless Distribution System (WDS) is a protocol for linking access points (AP) wirelessly. WDS supports two modes:

Bridge mode, which bridges traffic between two LANs wirelessly.

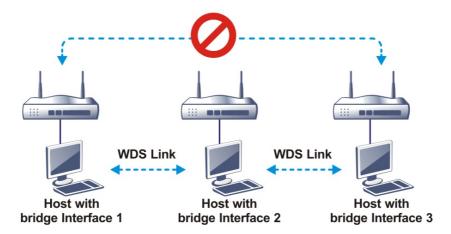

Repeater mode, which extends the coverage range of a WLAN.

The main difference between these two modes is that, in Repeater mode, the packets received from one peer AP can be repeated to another peer AP through WDS links, whereas in Bridge mode, packets received from a WDS link will only be forwarded to local wired or wireless hosts. In other words, only Repeater mode can do WDS-to-WDS packet forwarding.

In the following example, hosts connected to Bridge 1 or 3 can communicate with hosts connected to Bridge 2 through WDS links. However, hosts connected to Bridge 1 cannot communicate with hosts connected to Bridge 3 through Bridge 2.

Click WDS from Wireless LAN menu. The following page will be shown.

Wireless LAN(5GHz) >> WDS Settings

Mode: Disable ▼	Repeater
	Enable Peer MAC Address
Security:	
Disable WEP Pre-shared k	ey ::::::::::::::::::::::::::::::::::::
WEP:	
Use the same WEP key set in Security Se	ettings.
Pre-shared Key: Type:	Access Point Function: © Enable
○ WPA ● WPA2	Status:
Key: Max: 66 characters	Send "Hello" message to peers.
Note:	Link Status
WPA and WPA2 are not compatible with I WPA.	OrayTek Note: The status is valid only when the peer also supports this function.
Type 8~63 ASCII characters, for example "cfgs01a2".	e:

Available settings are explained as follows:

Item	Description
Mode	Choose the WDS mode. Disable - WDS is disabled. Repeater - WDS is enabled in Repeater mode.
Security	Choose one of the types for the router. The setting you choose here will make the following WEP or Pre-shared key field valid or not. Disable - Security is disabled. WEP - Security is enabled. Pre-shared key - Security is enabled.
Pre-shared Key	Type - Select either WPA or WPA2 as the encryption protocol. Key - Enter 8 ~ 63 ASCII characters or 64 hexadecimal digits with a leading "0x".
Repeater	If Repeater was selected as the WDS mode, enter the peer MAC addresses in these fields. Up to four peer MAC addresses may be entered in this page. Select the checkbox in front of a MAC address to enable it.
Access Point Function	Select Enable to make this router serve as an access point; select Disable to disable access point function.
Status	Click to send a "hello" message to peers. This only works if the peer also supports this function.

To save changes on this page, select OK; to discard changes, select Cancel.

III-1-7 Advanced Setting

On this page you can configure advanced settings such as operation mode, channel bandwidth, guard interval, and aggregation MSDU for wireless data transmission.

If the Vigor router supports dual-band WLAN, you will see separate Advanced Setting sections for 2.4GHz and 5GHz.

2.4 GHz Advanced Setting page

Wireless LAN(2.4GHz) >> Advanced Setting **HT Physical Mode** Operation Mode ● Mixed Mode ○ Green Field Channel Bandwidth O 20 O 20/40 O 40 Guard Interval O long o auto Aggregation MSDU(A-MSDU) ● Enable ○ Disable Long Preamble O Enable O Disable Antenna 2T2R ○ 1T1R Tx Power ● 100% ○ 80% ○ 60% ○ 30% ○ 20% ○ 10% WMM Capable ● Enable ○ Disable APSD Capable O Enable O Disable ● New ○ Old Rate Adaptation Algorithm Fragment Length (256 - 2346) 2346 bytes RTS Threshold (1 - 2347) 2347 bytes Country Code (Reference) Isolate 2.4GHz and 5GHz bands Enable Disable

Guard Interval	O long auto
Aggregation MSDU(A-MSDU)	● Enable ○ Disable
Tx Power	● 100% ○ 80% ○ 60% ○ 30% ○ 20% ○ 10%
WMM Capable	● Enable ○ Disable
APSD Capable	○ Enable ○ Disable
RTS Threshold (1 - 2347)	2347 bytes
Country Code	(Reference)
Isolate 2.4GHz and 5GHz bands	● Enable ○ Disable

OK

Available settings are explained as follows:

Item	Description
------	-------------

Operation Mode	Mixed Mode - The router can transmit data using all protocols supported by 802.11a/b/g and 802.11n standards. However, all wireless transmissions will be slowed down when any 802.11g or 802.11b wireless client is connected. Green Field - Select this mode to achieve the highest throughput. This mode supports data transmission between 802.11n systems only. In addition, it does not have protection mechanism to prevent conflicts with neighboring 802.11a/b/g devices.
Channel Bandwidth	20 -Vigor Router will utilize 20 MHz channels for data transmission and reception between the AP and wireless stations. 40 -Vigor Router will utilize 40 MHz for data transmission and reception between the AP and wireless stations. 20/40 - Vigor Router will utilize either 20 MHz or 40 MHz for data transmission and reception depending on the number of nearby wireless APs. 20MHz will be used when there are more than 10 wireless APs; otherwise 40MHz will be used. Selecting this setting ensures the best performance for data transit on networks with both 20 MHz and 40 MHz clients.
Guard Interval	Enabling this setting ensures the integrity of wireless traffic by inserting guard intervals between symbols to reduce the adverse effects of propagation delays, and signal multipath or reflections. If you choose auto as guard interval, the router will choose short guard interval (which increases wireless performance) or long guard interval for data transmit depending on the station capability.
Aggregation MSDU (A-MSDU)	Aggregation MSDU can combine frames of different sizes to improve performance at the MAC layer for clients from certain manufacturers. The default setting is Enable.
Long Preamble	This option determines the length of the sync field in an 802.11 packet. Most modern wireless network uses short preamble with 56 bit sync fields which yield better transmission speeds. However, some older 802.11b wireless devices only support long preamble which uses 128-bit sync fields. Click Enable to use Long Preamble to maintain compatibility with these devices.
Packet-OVERDRIVE	This feature can enhance the performance in data transmission about 40%* (by checking Tx Burst). It is active only when both the Access Point and Station (in wireless client) support and invoke this function at the same time. Note: Vigor N61 wireless adapter supports this function. Therefore, you can install it on your PC to take advantage of Packet-OVERDRIVE (Refer to the following picture of Vigor N61 wireless utility window: choose Enable for TxBURST on the Option tab).

RTS Threshold (1 - 2347)	Minimize the collision (unit is bytes) between hidden stations to improve wireless performance. Set the RTS threshold. Do not modify default value if you don't know what it is, default value is 2347. Adjusts the 802.11 maximum transmit frame size, which might reduce chances of collision with hidden stations. You are advised to leave the default value, 2347, untouched.	
Country Code	Vigor router broadcasts country codes according to the 802.11d standard. However, some wireless stations will detect/scan access points looking for country codes to determine which country it is in, and utilize channels appropriate to the country. The wireless client might get confused if there are multiple access points in the vicinity broadcasting different country codes. In such cases, it might be necessary to change the country code of the access point to ensure these clients can successfully establish a wireless connection.	
Isolate 2.4GHz and 5GHz bands	The default setting is "Enable". It means that the wireless client using 2.4GHz band is unable to connect to the wireless client with 5GHz band, and vice versa. For WLAN 2.4GHz and 5GHz set with the same SSID name: No matter such function is enabled or disabled, clients using WLAN 2.4GHz and 5GHz can communicate for each other if Isolate Member (in Wireless LAN>>General Setup) is NOT enabled for such SSID. Yet, if the function of Isolate Member (in Wireless LAN>>General Setup) is enabled for such SSID, clients using WLAN 2.4GHz and 5GHz will be unable to communicate with each other.	

After finishing all the settings here, please click OK to save the configuration.

III-1-8 Station Control

Station Control is used to specify the duration that the wireless client can connect to the Vigor router. If this function is disabled, wireless clients can connect to the router as long as the router is powered on and the wireless feature is enabled.

This feature is especially useful for free WiFi service. For example, a coffee shop may offer free Wi-Fi service to its guests for one hour every day. In this scenario, the connection time can be set to "1 hour" and reconnection time set to "1 day". In this way, every guest can surf the net for at most one hour, thus freeing up resources for other guests.

Wireless LAN(2.4GHz) >> Station Control

SSID 1	SSID 2	SSID 3	SSID
SSID		DrayTek	
Enable			
Connec	tion Time	1 hour	~
Reconn	ection Time	1 day	~
<u>Display</u>	All Station Contr	rol List	
<u>Hotspot</u>	t Web Portal		

Note:

Once the feature is enabled, the connection time quota will apply to each wireless client (identified by MAC address).

Available settings are explained as follows:

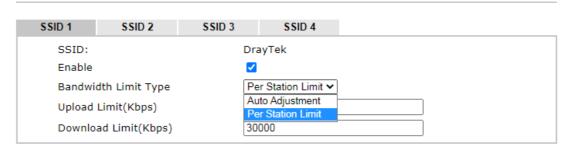

Item	Description
SSID	Display the selected SSID.
Enable	Select to enable station control function for this SSID.
Connection Time / Reconnection Time	In the Connection Time dropdown box, select the maximum amount of time that a wireless client is allowed to connect within the period of time selected in the Reconnection Time dropdown box. Select User defined to manually enter the time in days, hours and minutes.
Display All Station Control List	Click to display all wireless clients that are under Station Control.
Hotspot Web Portal	Click to jump to the Hotspot Web Portal page.

To save changes on this page, select OK; to discard changes, select Cancel.

III-1-9 Bandwidth Management

The downstream or upstream from FTP, HTTP or some P2P applications will occupy large of bandwidth and affect the applications for other programs. Please use Bandwidth Management to make the bandwidth usage more efficient.

Wireless LAN(2.4GHz) >> Bandwidth Management

Note:

- 1. Download: Traffic going to any station.Upload: Traffic being sent from a wireless station.
- 2. Allow auto adjustment could make the best utilization of available bandwidth.

Available settings are explained as follows:

Item	Description
SSID	Display the specific SSID name.
Enable	Check this box to enable the bandwidth management for clients.
Bandwidth Limit Type	Auto Adjustment - Bandwidth limit is determined by the system automatically. Per Station Limit - Bandwidth limit is determined according to the limitation of the wireless client.
Total Upload Limit	It is available when Auto Adjustment is selected. Type a value to define the maximum data traffic (uploading) for all of the wireless clients connecting to the Vigor router.
Total Download Limit	It is available when Auto Adjustment is selected. Type a value to define the maximum data client(stations) connecting to the Vigor router.
Upload Limit	It is available when Per Station Limit is selected. Type a value to define the maximum data traffic (uploading) for each wireless client connecting to the Vigor router.
Download Limit	It is available when Per Station Limit is selected Type a value to define the maximum data traffic (downloading) for each wireless client connecting to the Vigor router.

To save changes on this page, select OK; to discard changes, select Cancel.

III-1-10 AP Discovery

Vigor router can scan all regulatory channels to find working APs in the neighborhood. The scanning result can be used to determine the most desirable channel to use, or to locate an AP for establishing a WDS link. Note that during the scanning process (about 5 seconds), no client is allowed to connect to the Vigor. Only APs operating on the same band as the Vigor can be discovered.

Click the Scan button to start the AP discovery process.

Wireless LAN(2.4GHz) >> Access Point Discovery

Index	BSSID	Channel	RSSI	SSID	Authentication	
1	02:1D:AA:94:ED:E0	11	10%	DrayTek-LAN-B	Mixed(WPA+WPA2)/PSK	A
2	00:1D:AA:94:ED:E0	11	10%	DrayTek-LAN-A	Mixed(WPA+WPA2)/PSK

				Scan		

Note:

- 1. During the scanning process (~5 seconds), no station is allowed to connect with the router.
- 2. AP Discovery can only support up to 32 APs displayed on the screen.

Available settings are explained as follows:

Item	Description
Scan	Click to start the AP discovery process. The results will be shown on the box above this button.
Statistics	Shows channel usage by the neighboring APs. Wireless LAN >> Site Survey Statistics
	vvireless LAN >> Site Survey Statistics
	Recommended channels for usage: 1 2 3 4 5 6 7 8 9 10 11 12 13
	AP number v.s. Channel
	1 2 3 4 5 6 7 8 9 10 11 12 13 14 Channel
	Cancel
Add to WDS Settings	This field is available for WLAN (5GHz).
	Add to - To establish a WDS link to an AP that was found in an AP scan, click its entry in the Access Point List window, and its MAC address will be copied to the AP's MAC address field. Select the WDS mode you wish to use, Bridge, and click Add to. The AP will be configured in Wireless LAN >> WDS Settings.

III-1-11 Airtime Fairness

Airtime fairness is essential in wireless networks that must support critical enterprise applications.

Most of the applications are either symmetric or require more downlink than uplink capacity; telephony and email send the same amount of data in each direction, while video streaming and web surfing involve more traffic sent from access points to clients than the other way around. This is essential for ensuring predictable performance and quality-of-service, as well as allowing 802.11n and legacy clients to coexist on the same network. Without airtime fairness, offices using mixed mode networks risk having legacy clients slow down the entire network or letting the fastest client(s) crowd out other users.

With airtime fairness, every client at a given quality-of-service level has equal access to the network's airtime.

The wireless channel can be accessed by only one wireless station at the same time.

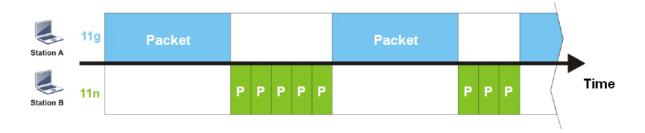

The principle behind the IEEE802.11 channel access mechanisms is that each station has equal probability to access the channel. When wireless stations have similar data rate, this principle leads to a fair result. In this case, stations get similar channel access time which is called airtime.

However, when stations have various data rate (e.g., 11g, 11n), the result is not fair. The slow stations (11g) work in their slow data rate and occupy too much airtime, whereas the fast stations (11n) become much slower.

Take the following figure as an example, there are 2 wireless stations on the wireless network, Station A (11g) and Station B (11n), both of which transmit data packets to the Vigor router. Even though they have equal opportunity to access the wireless channel, Station B (11n) gets only a little airtime and waits too much because Station A (11g) takes longer to send one packet. In other words, transmission from Station B (fast rate) is effectively being throttled by Station A (slow rate).

To alleviate this problem, Airtime Fairness tries to assign *similar airtime* to each station (A and B) by controlling TX traffic. In the following figure, Station B (11n) has higher opportunities to send data packets than Station A (11g). In this way, Station B (fast rate) gets its fair share of airtime and its speed is not limited by Station A (slow rate).

This is similar to automatic Bandwidth Limit, where the dynamic bandwidth limit of each station depends on instant active station number and airtime assignment. Please note that Airtime Fairness of 2.4 GHz and 5 GHz bands are independent, but stations connected to different SSIDs on the same band are prioritized as a group, because they all use the same wireless channel. Under certain environments, this function can reduce the adverse effects of slow wireless devices and improve the overall wireless performance.

Environments that can benefit by applying airtime fairness:

- (1) Many wireless stations.
- (2) All stations mainly use download traffic.
- (3) The performance bottleneck is wireless connection.

Wireless LAN(2.4GHz) >> Airtime Fairness

Please enable or disable this function according to the real situation and user experience. It is NOT suitable for all environments.

Available settings are explained as follows:

Item	Description		
Enable Airtime Fairness	Try to assign similar airtime to each wireless station by controlling TX traffic. Airtime Fairness - Click the link to display the following explanation of airtime fairness note.		
	Wiseless Authore Fairness - Google Chrome 172.17.3.110/wireless/ap_af_note.asp		

To save changes on this page, select OK; to discard changes, select Cancel.

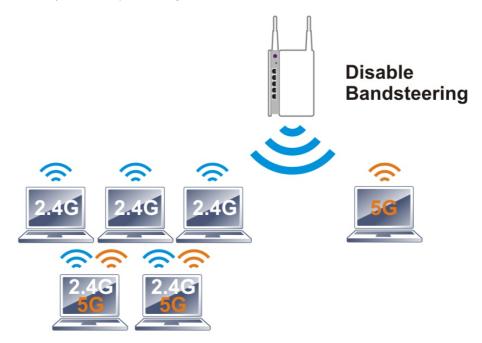

Info

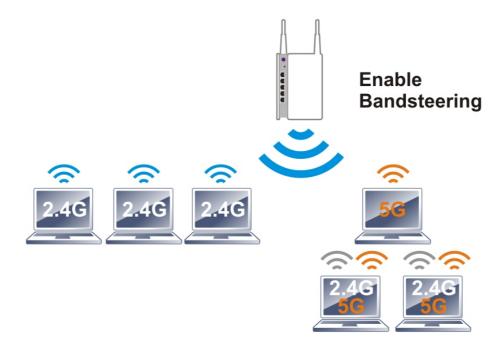

Airtime Fairness function and Bandwidth Limit function should be mutually exclusive. So their webs have extra actions to ensure these two functions are not enabled simultaneously.

III-1-12 Band Steering (2.4 GHz)

Band Steering detects if the wireless clients are capable of 5GHz operation, and steers them to that frequency. It helps to keep the 2.4 GHz band clear for legacy clients, and improves users' experience by reducing 2.4 GHz channel utilization.

If a dual-band client is detected, the AP will let the wireless client connect to the less congested wireless band, such as the 5GHz band, to reduce network congestion.

0

Info

For Band Steering to work properly, the same SSID and security settings must be configured on both 2.4 GHz and 5 GHz bands.

To configure Band Steering, go to the Wireless LAN (2.4GHz)>>Band Steering page:

Wireless LAN(2.4GHz) >> Band Steering Check Time for WLAN Client 5G Capability 15 second(s) (1 ~ 60) (Default: 15) Note: Please setup at least one pair of 2.4GHz and 5GHz Wireless LAN with the same SSID and security. OK Cancel

Available settings are explained as follows:

Item	Description
Enable Band Steering	When enabled, the router will detect if wireless clients are capable of dual-band or not within the time limit.
	Check Time When a wireless client attempts to connect, the router will block attempts to connect to the 2.4 GHz band for the specified period of time (default is 30 seconds), which hopefully will entice the client to connect to the 5 GHz band. If the client fails to connect to the 5 GHz band within the specified interval, it will then be able to connect to the 2.4 GHz band.

To save changes on this page, select OK; to discard changes, select Cancel.

AP Receives probe request from client 2.4G NO SSID/Security on 5G (same as 2.4G) 5G YES Check NO RSSI value 2.4G<5G 30 dbm YES Check Time Overtime (0 ~ 60 seconds) Wait for 5G connection request YES AP replies probe

The following diagram shows how Band Steering works.

Example: How to Use Band Steering?

1. Open Wireless LAN(2.4GHz)>>Band Steering.

request on 5G

2. Check the box of Enable Band Steering and use the default value (15) for check time setting.

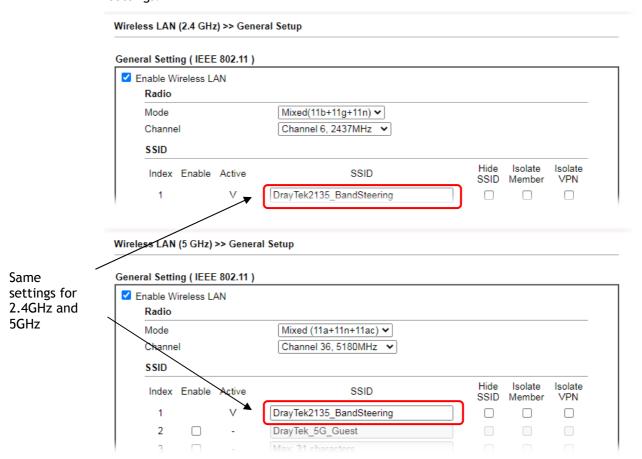

AP Receives probe

request on 2.4G

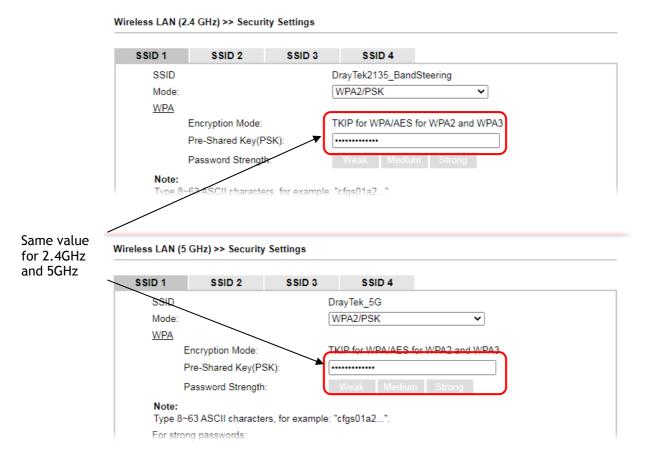

3. Click OK to save the settings.

4. Open Wireless LAN (2.4GHz)>>General Setup and Wireless LAN (5GHz)>> General Setup. Configure SSID as *DrayTek2135_BandSteerin*g for both pages. Click OK to save the settings.

5. Open Wireless LAN (2.4GHz)>>Security and Wireless LAN (5GHz)>>Security. Configure Security as *12345678* for both pages. Click OK to save the settings.

6. The Vigor will now steer wireless clients to the less congested wireless band, such as 5GHz to reduce network congestion.

III-1-13 Roaming

WiFi roaming allows wireless stations to switch connections between access points within an area to achieve better coverage and signal quality. It usually is up to the wireless station to switch to another access point with stronger signal strength while it is already connected, but Vigor wireless routers have an AP-assisted client roaming feature that could facilitate roaming on wireless stations. Depending on the roaming configuration, the Vigor monitors the Received Signal Strength Indicator (RSSI) of wireless stations and disconnect stations whose RSSI falls below a certain (configurable) threshold, thus forcing stations to seek out other WiFi hosts to connect to.

To configure wireless roaming settings, go to Wireless LAN >> Roaming.

Wireless LAN(2.4GHz) >> Roaming					
Router-assisted Client Roaming Pa	arameters				
Disable RSSI Requirement					
O Strictly Minimum RSSI	-73 dBm (42 %) (Default: -73)				
O Minimum RSSI	-66 dBm (60 %) (Default: -66)				
with Adjacent AP RSSI over	5 dB (Default: 5)				
	OK Cancel				

Available settings are explained as follows:

Item	Description
Disable RSSI Requirement	The Vigor router does not pay attention to the RSSI level of wireless stations. Selecting this option means the Vigor router will not interfere with the roaming behavior of wireless stations.
Strictly Minimum RSSI	The Vigor router will immediately disconnect the wireless station if its RSSI falls below the configured value.
Minimum RSSI	Minimum RSSI - The Vigor router will disconnect wireless clients whose RSSI falls below the minimum threshold only if there is also a neighboring wireless host (router or AP) that has an RSSI value (defined in the field of With Adjacent AP RSSI over) higher than a certain threshold.
	In order for this option to work, other wireless hosts connected to the same LAN subnet need to support the exchange of RSSI information with peer wireless hosts via Ethernet. With Adjacent AP RSSI over - Specify a value as a threshold.

To save changes on this page, select OK; to discard changes, select Cancel.

III-1-14 Station List

Station List provides an overview of all currently connected wireless clients and their status. As an added convenience, you may choose to add a particular wireless client to the Access Control by double clicking its entry in the list to populate the MAC address field, followed by clicking the Add button.

There are 3 tabs on the Station List screen: General, Advanced and Neighbor. Both General and Advanced show wireless stations connected to the Vigor router, whereas Neighbor shows nearby wireless stations connected to other access points that are detected by the Vigor router.

ion List					
			General	Advanced	Neighbo
Index	Status	IP Address	MAC Address	SSI	D
					~
			Refresh		
E: Connect P: Connect A: Connect B: Blocked N: Connect	ted, No encry ted, WEP. ted, WPA. ted, WPA2. by Access Co ting.				
Add to Acc	cess Control :				
Cliontia MA	C address]: :	1:	

Available settings are explained as follows:

Item	Description
Refresh	Click to refresh the station list.
Add	Click to add the address in the Client's MAC address field to Access Control.

Add

Below shows the Advanced tab, which lists the same clients as the General tab, but with more detailed information.

Wireless LAN(2.4GHz) >> Station List Station List General Neighbor Index MAC Address AID RSSI BW PSM MCS Rate Refresh Add to Access Control:

Note:

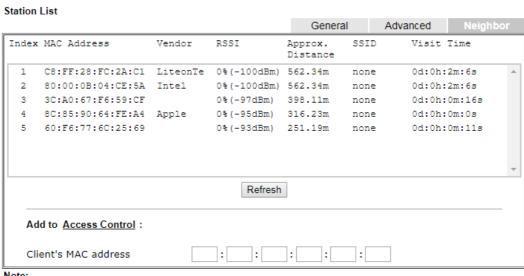

After a station connects to the router successfully, it may be turned off without notice. In that case, it will still be on the list until the connection expires.

Add

Below shows the Neighbor tab, which lists wireless clients seen by the router but are not connected to the router's built-in access point.

Wireless LAN(2.4GHz) >> Station List

Client's MAC address

Note:

- 1. Approx. Distance is calculated by actual signal strength of device detected. Inaccuracy might occur based on barrier encountered.
- 2. Due to the differences in signal strength for different devices, the calcuated value of approximate distance also might be different.
- 3. Trademarks and brand names are the properties of their respective owners.

Add

III-2 Mesh Network

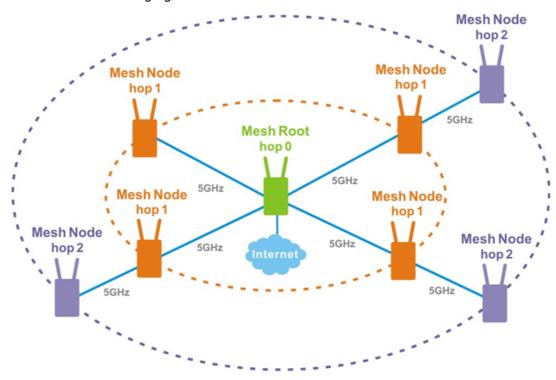

Vigor router plays a role of Mesh root in a VigorMesh network. To configure the mesh network, please use the Mesh Wizard or open the Mesh menu to configure detailed settings.

Please note that, within VigorMesh network,

- the total number allowed for mesh nodes is 8 (including the mesh root)
- the maximum number of hop is 3

Refer to the following figure:

For the mesh group set within VigorMesh network,

- It must be composed by "1" Mesh Root and "0~7" mesh nodes
- (Roaming) Normally members in a mesh group use the same Wireless SSID/security
- (Add) Only the mesh root can add a new mesh node into the mesh group
- (Recover) A disconnected mesh node will automatically try to connect to another connected mesh node of the same group

Mesh Root

Mesh Root indicates that Vigor router would be other AP's uplink connection. As a Mesh Root, Vigor router must connect to internet through WANs to have an internet connection.

The following figure shows how Vigor router runs as MESH ROOT:

III-2-1 Mesh Wizard

Mesh wizard offers a quick way to configure mesh network.

1. Go to Wizards>Mesh Wizard.

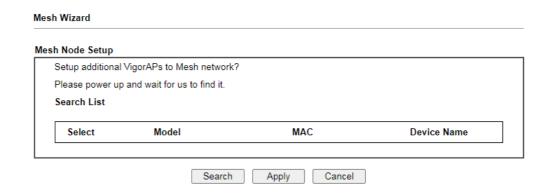

2. Check the Enable Mesh box. Click Next to get the following page.

Wifi Setup Wifi Settings Wifi Name: DrayTek2135_BandSteering Wifi Password: DrayTek_Guest Guest Wifi Name: DrayTek_Guest Guest Wifi Password: Note: The WiFi settings will apply to all Wireless bands.

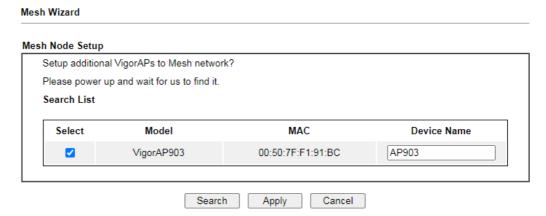

3. Set the Wifi Name and password; click Next to get the following page.

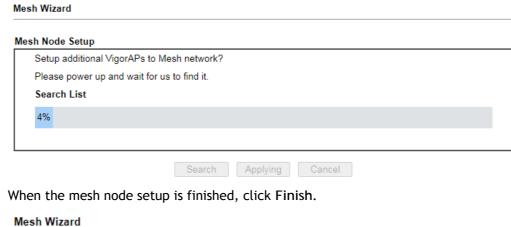

4. Set the password, if required. Then, click Finish to get the following page.

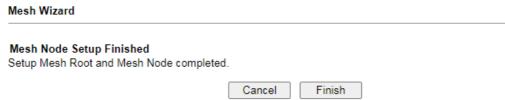

5. Click Search and wait for a few minutes. Later, APs around Vigor router will be shown below.

6. Select the one (e.g., VigorAP903 in this case) you want to group under Vigor router. Then, click Apply.

7.

8. After "Mesh Wizard Setup OK!" appears, go to Mesh>>Mesh Satus. The mesh node (AP903) has been grouped under the Vigor router.

Mesh Wizard

III-2-2 Mesh Setup

This page can modify settings related to Mesh. You can search and specify mesh nodes as members under current mesh group.

Available settings are explained as follows:

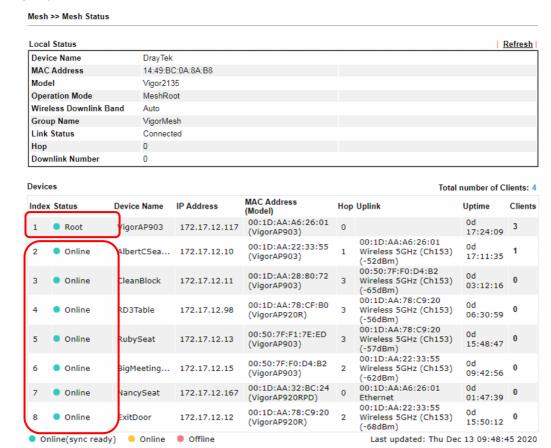

Item	Description		
General Setup			
Enable Mesh	Check to enable the mesh function.		
Role	Displays the role of Vigor router. Vigor router is a mesh root to provide internet acceess for Mesh Network.		
Wireless Downlink Band	At present, only 5GHz is dedicated as the downlink band for connecting with an uplinked mesh node.		
Group Name	Displays the name of the current mesh group.		
Auto Reselect	It is selected in default. To perform the auto reselect, make sure the process for CFG Sync and CFG Check for mesh nodes are successful. If enabled, after changing the environment of mesh network (e.g., offline, disconnection), the root device will perform auto reselect to reconstruct the mesh network.		

Laglaval	Change Bosic or Dotailed Belated information will be shown		
Log Level	Choose Basic or Detailed. Related information will be shown on the Diagnostics>>System Log.		
Mesh Group	The basic information including role, MAC address, and model name of the mesh root and node (up to 8 entries, one mesh root and seven mesh nodes) will be shown on this field. Reset - Click it to clear the Mesh Group information. Delete - Click it to remove the selected entry.		
Bridge VLAN to Mesh	Select to enable the function.		
Add Mesh Node			
Apply	Select the mesh node you want and click this button. The new mesh node will be shown on Mesh Group.		
Backup Mesh Config	Backup - Click the button to save the configuration as a file.		
Upload/Restore	Click the Upload button to specify a configuration file. Then click Restore to apply the configuration. When the MAC address of the Vigor router is not the mesh root of the mesh group, the restore operation will not succeed.		

III-2-3 Mesh Status

This page shows the mesh network status.

One Mesh Group can contain up to 8 devices. In the following figure, the 7th Device with hop 0 is one special Ethernet Backhaul. It means this node will use Ethernet cable to join the mesh group while others use the wireless link.

Available settings are explained as follows:

Item	Description
Local Status	Display general information for this device.
Devices	Display detailed information for this device (as mesh root) and mesh node(s) in the group. Index - Display the number of the device within a mesh group. Status - Display the role and connect status of the device. Device Name - Display the name of the device (for identification). IP Address - Display the IP address of the device. MAC Address - Display the MAC address of the device. Hop - Diplay the level of the device in Mesh Network. "0" means the device is connected to Internet by using Ethernet cable (wired). "1" to "3" means how many wireless links the device has to go through to reach a Hop 0 device.

	Uplink - Display the MAC address of the device that the A connects to.								
Total number of Clients	Display the station list of all mesh devices. Station List of All Devices								
	Index MA	C Address	Hostname	Vendor	SSID	Channe	el RSSI	TxRate(Kbps) RxRate(Kbps)

	20 80	C:85:90:64:FE:A4	N/A	Apple	staffs_4F5	36	36%(-75dBm)	0	0

III-2-4 Mesh Discovery

Before a Mesh Node is connected, it is unable to check the device status from Mesh Root. This page can help to discover all Mesh devices around and offer the Link Status and Operation Mode of each Mesh device.

For obtaining the list of devices around this Vigor router, click Scan. Later, surrounding Mesh device(s) will be displayed on this page.

Mesh >> Mesh Discovery

Device list

Index	MAC Address	Model	Operation Mode	Link Status
1	00:50:7F:F1:7F:1D	VigorAP903	MeshNode(Wireless)	Connected
2	00:1D:AA:4A:CF:C0	Vigor2865	MeshRoot	Connected

Scan

Note

During the scanning process (about 10 seconds), no station is allowed to connect with the Router and Mesh Network may disconnect.

Mesh >> Mesh Discovery

Device list

Index	MAC Address	Model	Operation Mode	Link Status
1	00:1D:AA:18:5F:80	Vigor2765	MeshRoot	Connected
2	00:50:7F:F1:91:BC	VigorAP903	MeshNode(Wireless)	New
3	00:50:7F:F1:7F:1D	VigorAP903	MeshNode(Wireless)	Connected
4	00:1D:AA:80:FE:D4	VigorAP1060C	AP	Connected

Scaning

Note:

During the scanning process (about 10 seconds), no station is allowed to connect with the Router and Mesh Network may disconnect.

III-2-5 Basic Config Sync

If you add one Mesh Node in a mesh group, the Mesh Root will send the basic configuration to the device. This page could help you to change the Mesh Root settings and deliver the new configuration of the Mesh Root to all "connected" Mesh Nodes.

Mesh >> Basic Configuration Sync

4	X_00507F_WirelessLAN_AP.General.SSID.1.Hide	0
5	X_00507F_WirelessLAN_AP.General.SSID.1.IsolateMember	0

Available settings are explained as follows:

Item	Description
System Maintenance / Wireless LAN (2.4Hz) / Wireless LAN (5GHz)	Check the item(s) you want to make configuration sync. Apply - Click it to apply the settings configured by this router to all connected mesh node.

Tips for Mesh Network Setup

- Set up TWO mesh devices with uplink RSSI larger than -65dBm.
- Upgrade the firmware version of Mesh devices through Mesh link, starting from the mesh device with less hop number. For example, upgrade the firmware from the root, hop1 Mesh Node then hop2 Mesh Node, and so on.
- VigorMesh network supports up to 3 hops of mesh devices. However, it is suggested to connect the mesh group with less than or equals to 2 hops.

For your reference, we make a real mesh environment test and get the following record. (Use VigorAP APP to do internet speed test with different hops mesh node.)

Internet Download Speed (for root and hop1 ~ hop3):

iPad connects to Root : 80Mbps

iPad connects to hop1 Node : 49Mbps (Uplink RSSI : -55dBm)

iPad connects to hop2 Node : 41Mbps (Uplink RSSI : hop2 -64dBm / hop1 -55dBm)

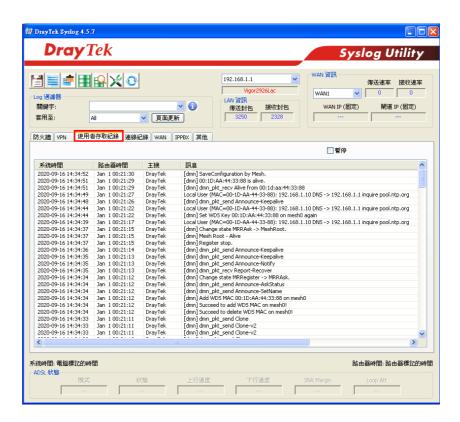

iPad connects to hop3 Node : 26Mbps (Uplink RSSI : hop3 -62dBm / hop1 -68dBm / hop1

-55dBm)

- It is not suggested to use a wireless Mesh Node with Ethernet cable connected to a Mesh Root.
- If resetting a Mesh Root,
 - All "connected" Mesh Nodes will be informed to reset.
 - Group List and Group Key will be reset, too.
 - For those Mesh Nodes unable to reset, reset them manually. Reset the Group List by web or factory default.
- If resetting a Mesh Node,
 - Group List and Group Key will be cleared.
 - Link Status will become "New".
- If Mesh Search / Apply / Discover is worked too fast or is done with empty result, your request may be rejected. Please try again.
- Troubleshooting:
 - Check the firmware version. Please make sure all APs within the mesh group are in the newest firmware version.
 - Check the OP (operation) Mode. Make sure new Mesh Node doesn't accidentally get DHCP IP and becomes AP mode.
 - Check the country code and channels. For example, it is impossible for connecting a VigorAP 912C Mesh Root with 5G channel 36 to VigorAP920R Wireless Mesh Node in EU country code.
 - Check the channel load. Make sure it is not over 70%.

- Collect some Mesh logs and send the result to DrayTek for analyzing.

III-2-6 Support List

Mesh >> Support List

The following compatibility test lists DrayTek AP models supported by Vigor router Mesh.

Model	Status	Firmware Version
VigorAP 802	Y	1.3.6
VigorAP 903	Y	1.3.8
VigorAP 912C	Y	1.3.6
VigorAP 1000C	Y	1.3.5

Y:Tested and is supported.

N:Not supported.

This page is left blank.

Part IV VoIP

Voice over IP network (VoIP) enables you to use your broadband Internet connection to make toll quality voice calls over the Internet.

IV-1 VoIP

Voice over IP network (VoIP) enables you to use your broadband Internet connection to make toll quality voice calls over the Internet.

Info

This function is used for "V" models.

There are many different call signaling protocols, methods by which VoIP devices can talk to each other. The most popular protocols are SIP, MGCP, Megaco and H.323. These protocols are not all compatible with each other (except via a soft-switch server).

The Vigor V models support the SIP protocol as this is an ideal and convenient deployment for the ITSP (Internet Telephony Service Provider) and softphone and is widely supported. SIP is an end-to-end, signaling protocol that establishes user presence and mobility in VoIP structure. Every one who wants to talk using his/her SIP Uniform Resource Identifier, "SIP Address". The standard format of SIP URI is

sip: user:password @ host: port

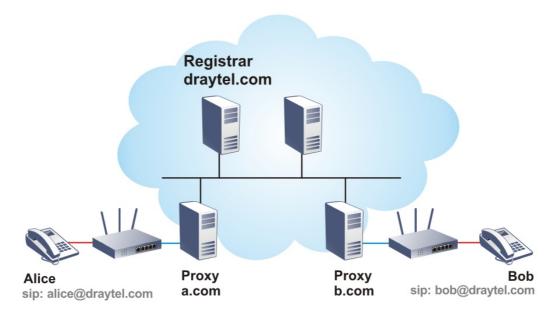

Some fields may be optional in different use. In general, "host" refers to a domain. The "userinfo" includes the user field, the password field and the @ sign following them. This is very similar to a URL so some may call it "SIP URL". SIP supports peer-to-peer direct calling and also calling via a SIP proxy server (a role similar to the gatekeeper in H.323 networks), while the MGCP protocol uses client-server architecture, the calling scenario being very similar to the current PSTN network.

After a call is setup, the voice streams transmit via RTP (Real-Time Transport Protocol). Different codecs (methods to compress and encode the voice) can be embedded into RTP packets. Vigor V models provide various codecs, including G.711 A/ μ -law, G.723, G.726 and G.729 A & B. Each codec uses a different bandwidth and hence provides different levels of voice quality. The more bandwidth a codec uses the better the voice quality, however the codec used must be appropriate for your Internet bandwidth.

Calling via SIP Servers

First, the Vigor V models of yours will have to register to a SIP Registrar by sending registration messages to validate. Then, both parties' SIP proxies will forward the sequence of messages to caller to establish the session.

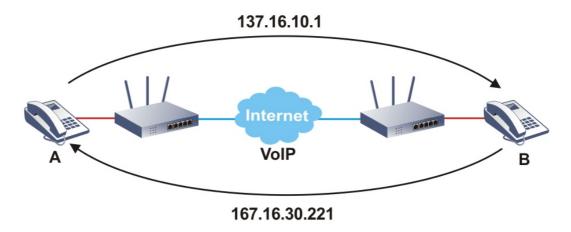

If you both register to the same SIP Registrar, then it will be illustrated as below:

The major benefit of this mode is that you don't have to memorize your friend's IP address, which might change very frequently if it's dynamic. Instead of that, you will only have to using dial plan or directly dial your friend's account name if you are with the same SIP Registrar.

Peer-to-Peer

Before calling, you have to know your friend's IP Address. The Vigor VoIP Routers will build connection between each other.

Vigor V models firstly apply efficient codecs designed to make the best use of available bandwidth, but Vigor V models also equip with automatic QoS assurance. QoS Assurance assists to assign high priority to voice traffic via Internet. You will always have the required inbound and outbound bandwidth that is prioritized exclusively for Voice traffic over Internet but you just get your data a little slower and it is tolerable for data traffic.

Our Vigor V models firstly apply efficient codecs designed to make the best use of available bandwidth, but Vigor V models also equip with automatic QoS assurance. QoS Assurance assists to assign high priority to voice traffic via Internet. You will always have the required inbound and outbound bandwidth that is prioritized exclusively for Voice traffic over Internet but you just get your data a little slower and it is tolerable for data traffic.

IV-1-1 VoIP Wizard

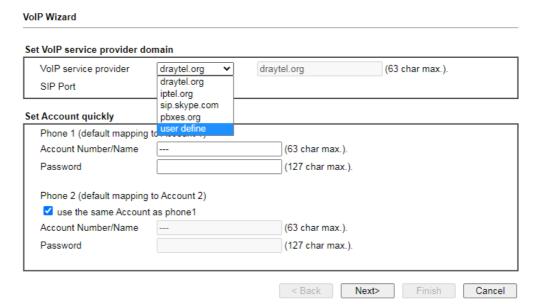

Vigor router offers a quick method to configure settings for VoIP application. Follow the steps listed below.

Info

This wizard is available for "V" model only.

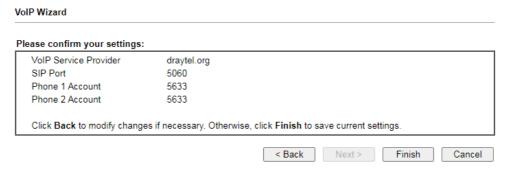

- 1. Open Wizards>>VoIP Wizard.
- 2. The screen of VoIP Wizard will be shown as follows.

Item	Description
Set VoIP service provider domain	VoIP service provider - Use the drop down list to choose the ISP which offers the VoIP service for your router. SIP Port - Use the default setting (5060).
Set Account quickly	Account Number/Name - Type the account number/name registered to your ISP. Password - Type the password for the account registered to your ISP.

	Use the same Account as phone 1 - If you don't need to configure Phone 2 settings, simply check this box.		
Next	Click it to get into the next setting page.		
Cancel	Click it to give up the VoIP wizard.		

3. After finished the settings above, click Next for viewing summary of such connection.

4. Click Finish. A page of VoIP Wizard Setup OK!!! will appear.

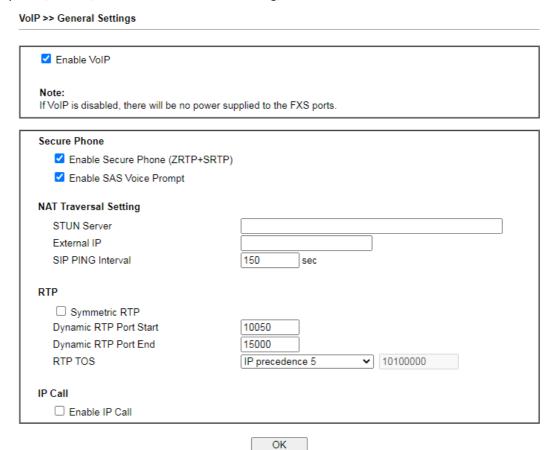

VolP Wizard Setup OK!

IV-1-2 General Settings

Open VoIP>>General Settings. The following page will appear. Check the box of Enable VoIP and click OK to open the configuration page. If not, no settings will be displayed.

After checking the box and click OK, the following page appears for you to configure secure phone, IP call; and set NAT Traversal Setting, RTP for the VoIP function.

Item	Description	
Secure Phone	Enable Secure Phone - It allows users to have encrypted RTP stream with the peer side using the same protocol (ZRTP+SRTP). Check this box to have secure call.	
	Enable SAS Voice Prompt - If it is enabled, SAS prompt will be heard for both ends every time. If it is disabled, no SAS prompt will be heard any more.	
NAT Traversal Setting	STUN Server - Type in the IP address or domain of the STUN	

	server.				
	External IP - Type in the gateway IP address. SIP PING interval - The default value is 150 (sec). It is useful for a Nortel server NAT Traversal Support.				
RTP	Symmetric RTP - Check this box to invoke the function. To make the data transmission going through on both ends of local router and remote router not misleading due to IP lost (for example, sending data from the public IP of remote router to the private IP of local router), you can check this box to solve this problem. Dynamic RTP Port Start - Specifies the start port for RTP				
	stream. The default value is 10050.				
	Dynamic RTP Port End - Specifies the end port for RTP stream. The default value is 15000.				
	RTP TOS - It decides the level of VoIP package. Use the drop down list to choose any one of them.				
	IP precedence 5 Manual IP precedence 1 IP precedence 2 IP precedence 3 IP precedence 5 IP precedence 6 IP precedence 7 AF Class1 (Low Drop) AF Class1 (Medium Drop) AF Class2 (Low Drop) AF Class2 (Medium Drop) AF Class2 (High Drop) AF Class3 (Medium Drop) AF Class3 (High Drop) AF Class3 (Medium Drop) AF Class3 (Medium Drop) AF Class4 (Low Drop) AF Class4 (High Drop) AF Class4 (Low Drop) AF Class4 (Medium Drop) AF Class4 (Medium Drop) AF Class4 (Medium Drop) AF Class4 (Medium Drop)				
IP Call	Enable IP Call - It allows that a user could dial outgoing IP Calls; and Vigor router could receive the incoming IP Calls.				

Application for Secure Phone

Enable SAS Voice Prompt, for ex: if vigor router A calls vigor router B with checking Enable Secure Phone and Enable SAS Voice Prompt, then:

- 1. After the connection established, vigor router A will send SAS voice prompt to A and vigor router B will send the SAS voice prompt to B.
- 2. Then the RTP traffic is secured until the call ends.
- 3. If vigor router A wants to call vigor router B again next time, both A and B will not hear any voice prompt again even checking Enable SAS Voice Prompt on web UI. It means only the first call between them will have voice prompt.

Enable SAS Voice Prompt, for ex: if vigor router A calls vigor router B with checking Enable Secure Phone but not Enable SAS Voice Prompt, then:

- 1. After the connection established, vigor router A will NOT send SAS voice prompt to vigor router A and vigor router B will NOT send the SAS voice prompt to vigor router B.
- 2. Even no voice prompt, but the RTP traffic is still secured until the call ends.

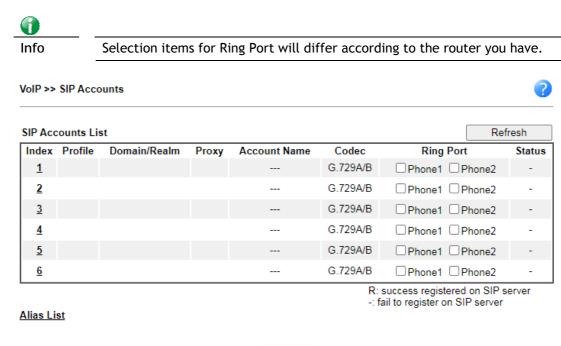

Info

If the incoming or outgoing calls do not match any entry on the phonebook, the router will try to make the call "being protected". But, if the call ends up "unprotected" (e.g. peer side does not support ZRTP+SRTP), the router will not play out a warning message.

IV-1-3 SIP Accounts

In this section, you set up your own SIP settings. When you apply for an account, your SIP service provider will give you an Account Name or user name, SIP Registrar, Proxy, and Domain name. (The last three might be the same in some case). Then you can tell your folks your SIP Address as in Account Name@ Domain name

As Vigor VoIP Router is turned on, it will first register with Registrar using AuthorizationUser@Domain/Realm. After that, your call will be bypassed by SIP Proxy to the destination using AccountName@Domain/Realm as identity.

OK

Available settings are explained as follows:

Item	Description
Index	Click this link to access into next page for setting SIP account.
Profile	Display the profile name of the account.
Domain/Realm	Display the domain name or IP address of the SIP registrar server.
Proxy	Display the domain name or IP address of the SIP proxy server.
Account Name	Display the account name of SIP address before @.
Codec	Display the codec type for the account.
Ring Port	Specify which port will ring when receiving a phone call.
Status	Show the status for the corresponding SIP account. R means such account is registered on SIP server successfully means the account is failed to register on SIP server.
Alias List	Allows you to set multiple SIP alias names.

Click any index link to access into the following page for configuring SIP account.

SIP Account Index No. 1 Profile Name iptel Register via Auto Call without Registration SIP Port 5060 Domain/Realm iptel.org Proxy iptel.org ☐ Act as outbound proxy diegolee415203 Display Name Account Number/Name diegolee415203 diegolee415203 ☐ Authentication ID Password ••••• Expiry Time 1 hour 🕶 3600 sec NAT Traversal Support None Mapping to Alias List None Call Forwarding Disable SIP URL Time Out sec Ring Port ☑ Phone1 ☑ Phone2 Ring Pattern 1 🕶 G.729A/B (8Kbps) 🕶 Prefer Codec ☐ Single Codec Packet Size 20ms **∨** Off 🗸 Voice Active Detector OK Cancel Clear

Item	Description				
Profile Name	Assign a name for this profile for identifying. You can type similar name with the domain. For example, if the domain name is <i>draytel.org</i> , then you might set <i>draytel-1</i> in this field.				
Register via	If you want to make VoIP call without register personal information, please choose None and check the box to achieve the goal. Some SIP server allows user to use VoIP function without registering. For such server, please check the box of CaII without Registration. Choosing Auto is recommended. The system will select a proper way for your VoIP call. Note, when WAN# First is selected, you have to specify backup WAN for this SIP account. Once the interface (WAN# First) disconnects, the backup WAN will perform the job automatically.				
	Register via SIP Port	WAN1 First ✓ Cal backup WAN list: Available WAN3	I without Registration Chosen		
SIP Port	Set the port number for sending/receiving SIP message for				

	building a session. The default value is 5060. Your peer must set the same value in his/her Registrar.			
Domain/Realm	Set the domain name or IP address of the SIP Registrar server.			
Proxy	Set domain name or IP address of SIP proxy server. By the time you can type :port number after the domain name to specify that port as the destination of data transmission (e.g., nat.draytel.org:5065)			
Act as Outbound Proxy	Check this box to make the proxy acting as outbound proxy			
Display Name	The caller-ID that you want to be displayed on your friend's screen.			
Account Number/Name	Enter your account name of SIP Address, e.g. every text before @.			
Authentication ID	Check the box to invoke this function and enter the name or number used for SIP Authorization with SIP Registrar. If this setting value is the same as Account Name, it is not necessary for you to check the box and set any value in this field.			
Password	The password provided to you when you registered with a SIP service.			
Expiry Time	The time duration that your SIP Registrar server keeps your registration record. Before the time expires, the router will send another register request to SIP Registrar again.			
NAT Traversal Support	If the router (e.g., broadband router) you use connects to internet by other device, you have to set this function for your necessity. None - Disable this function. Stun - Choose this option if there is Stun server provided for your router. Manual - Choose this option if you want to specify an external IP address as the NAT transversal support. Nortel - If the soft-switch that you use supports Nortel solution, you can choose this option.			
Mapping to Alias List	Select one of the alias profiles.			
Call Forwarding	There are four options for you to choose. Disable is to close call forwarding function. Always means all the incoming calls will be forwarded into SIP URL without any reason. Busy means the incoming calls will be forwarded into SIP URL only when the local system is busy. No Answer means if the incoming calls do not receive any response, they will be forwarded to the SIP URL by the time out. SIP URL - Type in the SIP URL (e.g., aaa@draytel.org or abc@iptel.org) as the site for call forwarded. Time Out - Set the time out for the call forwarding. The default setting is 30 sec.			
Ring Port	Set Phone 1 and/or Phone 2 as the default ring port(s) for this SIP account.			
Ring Pattern	Choose a ring tone type for the VoIP phone call.			
Prefer Codec	Select one of five codecs as the default for your VoIP calls. The codec used for each call will be negotiated with the peer party before each session, and so may not be your default			

	choice. The default codec is G.729A/B; it occupies little bandwidth while maintaining good voice quality.		
	If your upstream speed is only 64Kbps, do not use G.711 codec. It is better for you to have at least 256Kbps upstream if you would like to use G.711.		
	Single Codec - If the box is checked, only the selected Codec will be applied.		
Packet Size	The amount of data contained in a single packet. The default value is 20 ms, which means the data packet will contain 20 ms voice information.		
Voice Active Detector	This function can detect if the voice on both sides is active or not. If not, the router will do something to save the bandwidth for other using. Click On to invoke this function; click Off to close the function.		

After finishing all the settings here, please click OK to save the configuration.

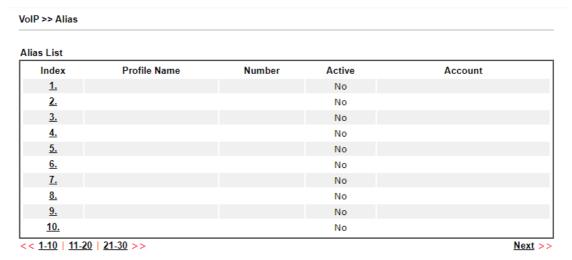

IV-1-3-1 Alias List

This page lists all SIP alias profiles.

A SIP alias is just like an extension number in that people can dial it to reach a specific person directly. Normally, when you have a user account for one ITSP, the ITSP will provide you one SIP account. However, with this feature, you can own multiple SIP alias over one SIP account. When you register with a regular user account, the alias is registered as well as the main SIP account. Then, when somebody dials the alias, the SIP URI bound to the alias will ring.

Click the Alias List link to access the configuration page as shown below.

Item	Description
Index	Click the number link for each profile.

Profile Name	Display the alias name for such sub account.			
Number	Display the phone number of such account.			
Active	Display current activation status for such account, enabled or disabled.			
Account	Display the SIP account number for such sub account attached.			

You can set 30 profiles as alias. Click the number under Index to set detailed configuration.

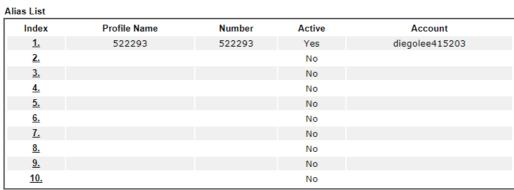

Available settings are explained as follows:

Item	Description
Active	Click Enable to activate this entry. Or, click Disable to inactive this entry.
Alias Name	Specify a name for an alias number.
Alias Number	Enter an alias number. The alias numbers are obtained from your ITSP.
Alias of SIP account	Choose one of the items listed in SIP account list for this alias profile.

After finishing all the settings here, please click OK to save the configuration.

VoIP >> Alias

<< <u>1-10</u> | <u>11-20</u> | <u>21-30</u> >>

IV-1-4 DialPlan

This page allows you to set phone book, digit map, call barring, regional settings and PSTN setup for the VoIP function. Click the links on this page to access into next pages for detailed settings.

IV-1-4-1 Phone Book

In this section, you can set your VoIP contacts in the "phonebook". It can help you to make calls quickly and easily by using "speed-dial" Phone Number. There are total 60 index entries in the phonebook for you to store all your friends and family members' SIP addresses. Loop through and Backup Phone Number will be displayed if you are using Vigor2135 series for setting the phone book.

VoIP >> DialPlan Setup

Pho	ne Book	Digit Map	Call Barri	ng R	egional	
Index	Phone Number	Display Name	SIP URL	Dial Out Account	Secure Phone	Status
<u>1.</u>				Default	None	X
<u>2.</u>				Default	None	X
<u>3.</u>				Default	None	X
<u>4.</u>				Default	None	X
<u>5.</u>				Default	None	X

Next >>

Click any index number to display the dial plan setup page.

VoIP >> DialPlan Setup

Available settings are explained as follows:

Item	Description	
Enable	Select to enable this entry.	
Phone Number	The speed-dial number of this index. This can be any number you choose, using digits 0-9 and * .	
Display Name	The Caller-ID that you want to be displayed on your friend's screen. This let your friend can easily know who's calling without memorizing lots of SIP URL Address.	
SIP URL	Enter your friend's SIP Address.	
Dial Out Account	Choose one of the SIP accounts for this profile to dial out. It is useful for both sides (caller and callee) that registered to different SIP Registrar servers. If caller and callee do not use the same SIP server, sometimes, the VoIP phone call connection may not succeed. By using the specified dial out account, the successful connection can be assured.	
Secure Phone	ZRTP+SRTP - It allows users to have encrypted RTP stream with the peer side using the same protocol (ZRTP+SRTP). Check this box to have secure call.	
Cancel	Return to previous web page.	

After finishing all the settings here, please click OK to save the configuration.

Info

If the incoming or outgoing calls do not match any entry on the phonebook, the router will try to make the call "being protected". But, if the call ends up "unprotected" (e.g. peer side does not support ZRTP+SRTP), the router will not play out a warning message.

Example:

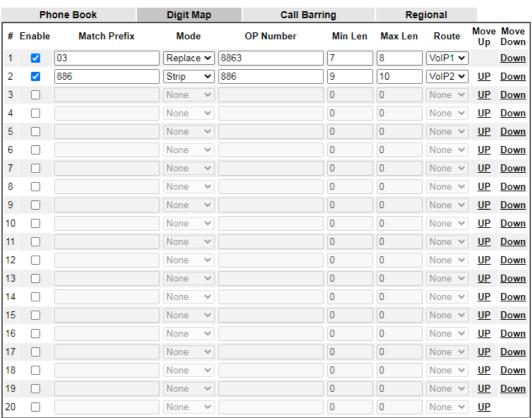

VoIP >> DialPlan Setup

P	hone Book	Digit Map	Call Barrin	g	Re	gional	
Index	Phone Number	Display Name	SIP URL		Out ount	Secure Phone	Status
<u>1.</u>	0910234567	Polly	1112@fwd.pulver.com	Default		ZRTP+SRTP	V
<u>2.</u>				Default		None	X
<u>3.</u>				Default		None	X
<u>4.</u>				Default		None	x
<u>5.</u>				Default		None	X

IV-1-4-2 Digit Map

For the convenience of user, this page allows users to edit prefix number for the SIP account with adding number, stripping number or replacing number. It is used to help user have a quick and easy way to dial out through VoIP interface.

VoIP >> DialPlan Setup

Note:

- The length for Min Len and Max Len fields should be between 0~25.
- 2. Wildcard '?' is supported.

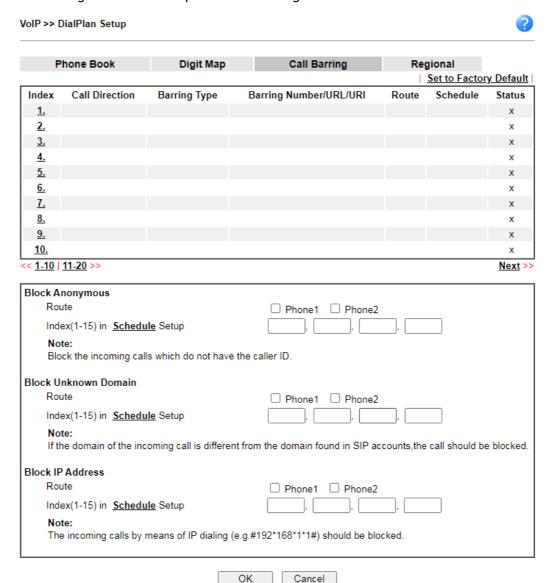

Item	Description
Enable	Check this box to invoke this setting.
Match Prefix	It is used to match with the number you dialed and may be modified by the action (add, strip or replace) with the OP Number.
Mode	None - No action. Add - When you choose this mode, the OP number will be added before the match prefix number for calling out through the specific route.
	Strip - When you choose this mode, the partial or whole match prefix number will be deleted according to the OP number. Take the above picture (Prefix Table Setup web page) as an example, the OP number of 886 will be deleted completely for the match prefix number is set with 886.
	Replace - When you choose this mode, the OP number will be replaced by the prefix number for calling out through

	the specific VoIP interface. Take the above picture (Prefix Table Setup web page) as an example, the prefix number of 03 will be replaced by 8863. For example: dial number of "031111111" will be changed to "88631111111" and sent to SIP server.
OP Number	The front number you type here is the first part of the account number that you want to execute special function (according to the chosen mode) by using the prefix number.
Min Len	Set the minimal length of the dial number for applying the prefix number settings. Take the above picture (Prefix Table Setup web page) as an example, if the dial number is between 7 and 9, that number can apply the prefix number settings here.
Max Len	Set the maximum length of the dial number for applying the prefix number settings.
Route	Choose the one that you want to enable the prefix number settings from the saved SIP accounts. Please set up one SIP account first to make this interface available. This item will be changed according to the port settings configured in VoIP>> Phone Settings.
Move UP /Move Down	Click the link to move the selected entry up or down.

After finishing all the settings here, please click OK to save the configuration.

IV-1-4-3 Call Barring

Call barring is used to block phone calls coming from the one that is not welcomed.

Additionally, you can set advanced settings for call barring such as Block Anonymous, Block Unknown Domain or Block IP Address.

For Block Anonymous - this function can block the incoming calls without caller ID on the interface (Phone port) specified in the following window. Such control also can be done based on preconfigured schedules.

For Block Unknown Domain - this function can block incoming calls (through Phone port) from unrecognized domain that is not specified in SIP accounts. Such control also can be done based on preconfigured schedules.

For Block IP Address - this function can block incoming calls (through Phone port) coming from IP address. Such control also can be done based on preconfigured schedules.

Click any index number to display the call barring setup page.

VoIP >> DialPlan Setup

Call Barring Index No. 1 ✓ Enable Call Direction Barring Type Specific URI/URL Specific URI/URL Route Index(1-15) in Schedule Setup Note: Wildcard '?' is supported.

Item	Description	
Enable	Check it to enable this entry.	
Call Direction	Determine the direction for the phone call, IN - incoming call, OUT-outgoing call, IN & OUT - both incoming and outgoing calls.	
Barring Type	Determine the type of the VoIP phone call, URI/URL or number.	
Specific URI/URL or Specific Number	This field will be changed based on the type you selected for barring Type.	
Route	All means all the phone calls will be blocked with such mechanism.	
Index (1-15) in Schedule Setup	Enter the index of schedule profiles to control the call barring according to the preconfigured schedules. Refer to section Applications>>Schedule for detailed configuration.	

IV-1-4-4 Regional

This page allows you to process incoming or outgoing phone calls by regional. Default values (common used in most areas) will be shown on this web page. You *can change* the number based on the region that the router is placed.

VoIP >> DialPlan Setup

Phone Book	Digit Map	Call Barring	Regional

Block IP Calls [Act]:	*50 +#	Block IP Calls [Deact]:	*05 +#
Block Last Calls [Act]:	*60 +#		

Item	Description
Enable Regional	Check this box to enable this function.
Last Call Return [Miss]	Sometimes, people might miss some phone calls. Please dial number typed in this field to know where the last phone call comes from and call back to that one.
Last Call Return [In]	You have finished an incoming phone call, however you want to call back again for some reason. Please dial number typed in this field to call back to that one.
Last Call Return [Out]	Dial the number typed in this field to call the previous outgoing phone call again.
Call Forward [All][Act]	Dial the number typed in this field to forward all the incoming calls to the specified place.
Call Forward [Deact]	Dial the number typed in this field to release the call forward function.
Call Forward [Busy][Act]	Dial the number typed in this field to forward all the incoming calls to the specified place while the phone is busy.
Call Forward [No Ans][Act]	Dial the number typed in this field to forward all the incoming calls to the specified place while there is no answer of the connected phone.
Do Not Disturb [Act]	Dial the number typed in this field to invoke the function of DND.
Do Not Distrub [Deact]	Dial the number typed in this field to release the DND function.

Hide caller ID [Act]	Dial the number typed in this field to make your phone number (ID) not displayed on the display panel of remote end.
Hide caller ID [Deact]	Dial the number typed in this field to release this function.
Call Waiting [Act]	Dial the number typed in this field to make all the incoming calls waiting for your answer.
Call Waiting [Deact]	Dial the number typed in this field to release this function.
Block Anonymous[Act]	Dial the number typed in this field to block all the incoming calls with unknown ID.
Block Anonymous[Deact]	Dial the number typed in this field to release this function.
Block Unknown Domain [Act]	Dial the number typed in this field to block all the incoming calls from unknown domain.
Block Unknown Domain [Deact]	Dial the number typed in this field to release this function.
Block IP Calls [Act]	Dial the number typed in this filed to block all the incoming calls from IP address.
Block IP Calls [Deact]	Dial the number typed in this field to release this function.
Block Last Calls [Act]	Dial the number typed in this field to block the last incoming phone call.

After finishing all the settings here, please click OK to save the configuration.

IV-1-5 Phone Settings

This page allows user to set phone settings for Phone 1 and Phone 2 respectively. However, it changes slightly according to different model you have.

VoIP >> Phone Settings

Index	Port	Call Feature	Tone	Gain (Mic/Speaker)	Default SIP Account	DTMF Relay
1	Phone1	CW,CT,	User Defined	5/5		OutBand
2	Phone2	CW,CT,	User Defined	5/5		OutBand

Available settings are explained as follows:

Item	Description
Phone Setting	Port - there are two phone ports provided here for you to configure. Phone1/Phone2 allows you to set general settings for PSTN phones.
	Call Feature - A brief description for call feature will be shown in this field for your reference.
	Tone - Display the tone settings that configured in the advanced settings page of Phone Index.
	Gain - Display the volume gain settings for Mic/Speaker that configured in the advanced settings page of Phone Index.
	Default SIP Account - "draytel_1" is the default SIP account. You can click the number below the Index field to change SIP account for each phone port.
	DTMF Relay - Display DTMF mode that configured in the advanced settings page of Phone Index.

After finishing all the settings here, please click OK to save the configuration.

Detailed Settings for Phone Port

Click the number link for Phone port, you can access into the following page for configuring Phone settings.

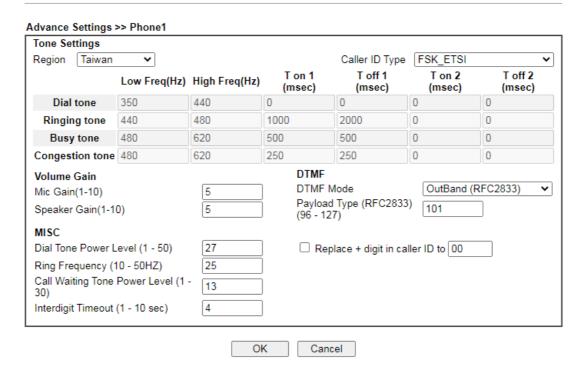

Phone1		_
Call Feature	Default SIP Account	~
☐ Hotline	☐ Play dial tone only when account registered	
Session Timer 90 sec		
☐ T.38 Fax Function		
Error Correction Mode REDUNDANCY ▼		
☐ DND(Do Not Disturb) Mode		
Index(1-15) in Schedule Setup:		
Note:		
Action and Idle Timeout settings will be ignored.		
Index(1-60) in Phone Book as Exception List:		
,,,,		
CLIR (hide caller ID)		
✓ Call Waiting		
✓ Call Transfer		

Item	Description
Hotline	Check the box to enable it. Type in the SIP URL in the field for dialing automatically when you pick up the phone set.
Session Timer	Check the box to enable the function. In the limited time that you set in this field, if there is no response, the connecting call will be closed automatically.
T.38 Fax Function	Check the box to enable T.38 fax function.
	Error Correction Mode - choose a mode for error correction.
DND (Do Not Disturb) mode	Set a period of peace time without disturbing by VoIP phone call. During the period, the one who dial in will listen busy tone, yet the local user will not listen any ring tone.
	Index (1-15) in Schedule - Enter the index of schedule profiles to control when the phone will ring and when will not according to the preconfigured schedules. Refer to section Application >>Schedule for detailed configuration.
	Index (1-60) in Phone Book - Enter the index of phone book profiles. Refer to section DialPlan - Phone Book for detailed configuration.
CLIR (hide caller ID)	Check this box to hide the caller ID on the display panel of the phone set.
Call Waiting	Check this box to invoke this function. A notice sound will appear to tell the user new phone call is waiting for your response. Click hook flash to pick up the waiting phone call.
Call Transfer	Check this box to invoke this function. Click hook flash to initiate another phone call. When the phone call connection succeeds, hang up the phone. The other two sides can communicate, then.

Default SIP Account	You can set SIP accounts (up to six groups) on SIP Account page. Use the drop down list to choose one of the profile names for the accounts as the default one for this phone setting.
	Play dial tone only when account registered - Check this box to invoke the function.

In addition, you can press the Advanced button to configure tone settings, volume gain, MISC and DTMF mode. Advanced setting is provided for fitting the telecommunication custom for the local area of the router installed. Wrong tone settings might cause inconvenience for users. To set the sound pattern of the phone set, simply choose a proper region to let the system find out the preset tone settings and caller ID type automatically. Or you can adjust tone settings manually if you choose User Defined. TOn1, TOff1, TOn2 and TOff2 mean the cadence of the tone pattern. TOn1 and TOn2 represent sound-on; TOff1 and TOff2 represent the sound-off.

VoIP >> Phone Settings

Item	Description
Region	Select the proper region which you are located. The common settings of Caller ID Type, Dial tone, Ringing tone, Busy tone and Congestion tone will be shown automatically on the page. If you cannot find out a suitable one, please choose User Defined and fill out the corresponding values for dial tone, ringing tone, busy tone, congestion tone by yourself for VoIP phone. Also, you can specify each field for your necessity. It is recommended for you to use the default settings for VoIP
	communication.
Volume Gain	Mic Gain (1-10)/Speaker Gain (1-10) - Adjust the volume of microphone and speaker by entering number from 1-10. The larger of the number, the louder the volume is.
MISC	Dial Tone Power Level - This setting is used to adjust the

loudness of the dial tone. The smaller the number is, the louder the dial tone is. It is recommended for you to use the default setting.

Call Waiting Tone Power Level - This setting is used to adjust the loudness of the call waiting tone. The smaller the number is, the louder the tone is. It is recommended for you to use the default setting.

Interdigit Timeout -Type a value in this field to specify time limit for interdigit.

DTMF

DTMF Mode - There are four DTMF modes for you to choose.

- InBand Choose this one then the Vigor will send the DTMF tone as audio directly when you press the keypad on the phone.
- OutBand Choose this one then the Vigor will capture the keypad number you pressed and transform it to digital form then send to the other side; the receiver will generate the tone according to the digital form it receive. This function is very useful when the network traffic congestion occurs and it still can remain the accuracy of DTMF tone.
- SIP INFO- Choose this one then the Vigor will capture the DTMF tone and transfer it into SIP form. Then it will be sent to the remote end with SIP message.

Payload Type (rfc2833) - Type a number from 96 to 127, the default value was 101. This setting is available for the OutBand (RFC2833) mode.

Replace + digit in caller ID to - For international phone call, the phone number could add a '+' sign, for example, +8865972727. However, the caller ID (DTMF type especially) can not display '+' at all.

Therefore, this function can be enabled to give another number to replace the plus sign, for example, "+" can be replaced by "00". Then the above phone number will become 008865972727. When the callee receives such number, he can use re-dial function to dial back to the caller.

IV-1-6 Status

From this page, you can find codec, connection and other important call status for each port.

VoIP >> Status

Status									Refres	h Seco	nds:	10 🕶	Refresh

xxxxxxxx : VoIP is encrypted. xxxxxxxx : VoIP isn't encrypted.

Item	Description
Refresh Seconds	Specify the interval of refresh time to obtain the latest VoIP calling information. The information will update immediately when the Refresh button is clicked.
Port	It shows current connection status for Phone(s) ports.
Status	It shows the VoIP connection status. IDLE - Indicates that the VoIP function is idle. HANG_UP - Indicates that the connection is not established (busy tone). CONNECTING - Indicates that the user is calling out. WAIT_ANS - Indicates that a connection is launched and waiting for remote user's answer. ALERTING - Indicates that a call is coming. ACTIVE-Indicates that the VoIP connection is launched.
Codec	Indicates the voice codec employed by present channel.
PeerID	The present in-call or out-call peer ID (the format may be IP or Domain).
Elapse(hh:mm:ss)	The format is represented as hours:minutes:seconds.
Tx Pkts	Total number of transmitted voice packets during this connection session.

Rx Pkts	Total number of received voice packets during this connection session.
Rx Losts	Total number of lost packets during this connection session.
Rx Jitter	The jitter of received voice packets.
In Calls	Accumulation for the times of in call.
Out Calls	Accumulation for the times of out call.
Miss Calls	Accumulation for the times of missing call.
Speaker Gain	The volume of present call.
Log	Display logs of VoIP calls.

IV-1-7 Diagnostics

VoIP Diagnostics is used for diagnosing if VoIP phone failure is caused by different tone or caller ID.

<u>Tone</u>

Part V VPN

SSL VPN

Certificate Management

A Virtual Private Network (VPN) is the extension of a private network that encompasses links across shared or public networks like the Internet. In short, by VPN technology, you can send data between two computers across a shared or public network in a manner that emulates the properties of a point-to-point private link.

It is a form of VPN that can be used with a standard Web browser.

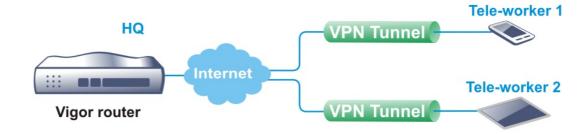

A digital certificate works as an electronic ID, which is issued by a certification authority (CA). It contains information such as your name, a serial number, expiration dates etc., and the digital signature of the certificate-issuing authority so that a recipient can verify that the certificate is real. Here Vigor router support digital certificates conforming to standard X.509.

V-1 VPN and Remote Access

A Virtual Private Network (VPN) is an extension of a private network that allows users to access network resources that available on the private network across shared or public networks such as the Internet, as if users are directly connected to the private network.

Here are some uses of VPNs:

- Communication between home office and customer.
- Secure connection between Teleworker, staff on business trip and main office.
- Exchange data between remote office and main office.
- POS between chain store and headquarters.
- Circumvention of Internet censorship that filters websites or contents.
- Circumvention of geolocation techniques employed by service providers or vendors to block or restrict services to users.
- Secure communications over public access points

V-1-1 VPN Client Wizard

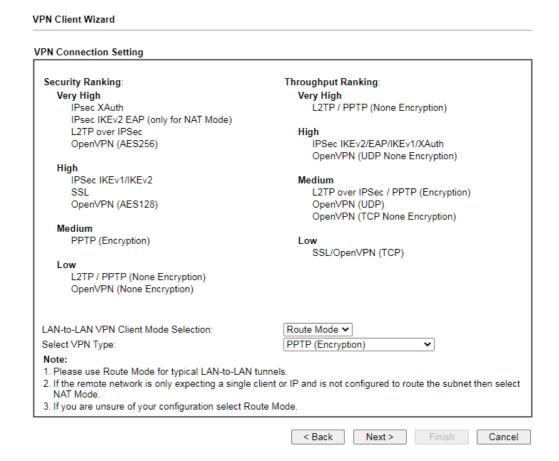

The VPN Client Wizard will configure the router as a *client* to connect to a remote VPN server using a LAN-to-LAN VPN tunnel. The wizard will guide you through the setup process.

1. On the menu bar, click on Wizards, and then VPN Client Wizard.

Item	Description
Please choose a LAN-to-LAN Profile	The profile used to store this tunnel configuration. Selecting an index that has already been setup previously will result in the existing setup getting overwritten by the wizard.

2. When you finish the mode and profile selection, please click Next to open the following page.

Available settings are explained as follows:

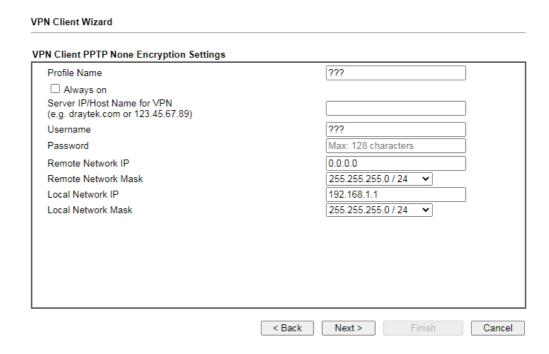

Item	Description
LAN-to-LAN VPN Client Mode Selection	Route Mode - All traffic between the local network and the remote network bear the originating IP addresses. Select this if the VPN server can establish routes to handle inter-LAN traffic routing.
	NAT Mode - The VPN client (local router) uses a single IP address assigned by the VPN server (remote router) and uses NAT to keep track of the connections. Select this if the VPN server expects only one IP address on the local network to communicate with the remote network.
Select VPN Type	Select a VPN protocol for the LAN-to-LAN tunnel. Different VPN protocols offer different levels or security and performance.

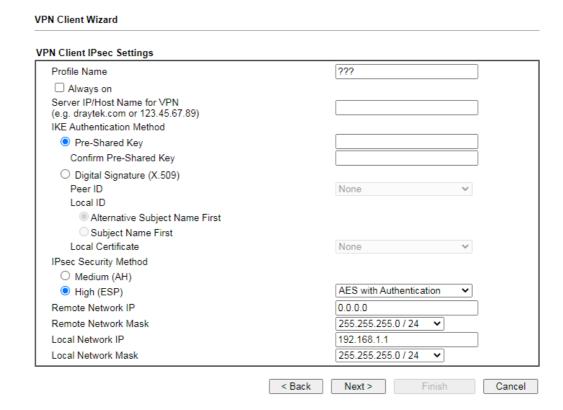

Info

The following descriptions for VPN Type are based on the Route Mode specified in LAN-to-LAN Client Mode Selection.

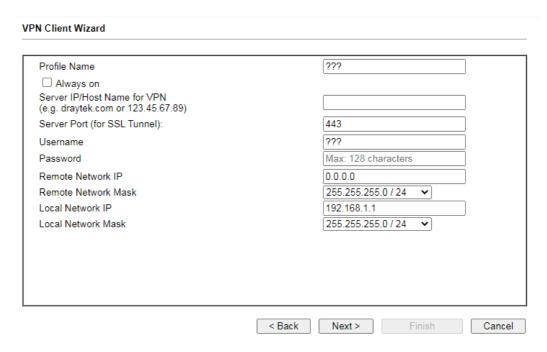

If you have selected PPTP (None Encryption) or PPTP (Encryption), the following configuration screen appears.

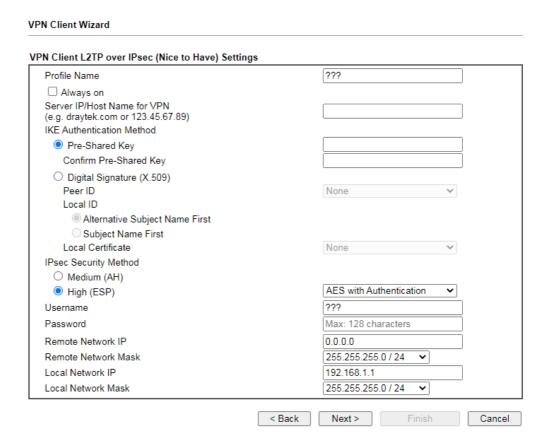

If you have selected IPsec, the following configuration screen appears.

If you have selected SSL/L2TP, the following configuration screen appears.

If you have selected L2TP over IPsec (Nice to Have) or L2TP over IPsec (Must), the following configuration screen appears.

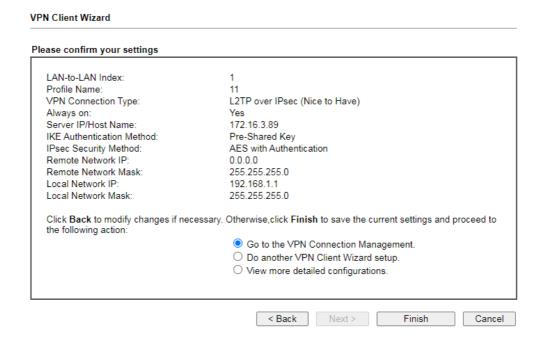

If you have selected OpenVPN, the following configuration screen appears.

ofile Name	???

Item	Description
Profile Name	Name that identifies this profile. The maximum length of the Profile Name is 10 characters.
Always On	If selected, the router will maintain the VPN connection.
Server IP/Host Name for VPN	Enter the IP address or hostname of the server of the remote VPN server.
IKE Authentication Method	IKE Authentication Method to be used. Choose between Pre-shared Key and Digital Signature (X.509).
	Pre-shared Key
	• Pre-Shared Key- Specify a key for IKE authentication.
	• Confirm Pre-Shared Key-Confirm the pre-shared key.
	Digital Signature (X.509)
	 Peer ID - Select Peer ID from the dropdown list. Peer IDs are managed using VPN and Remote Access >> IPsec Peer Identity.
	 Local ID - Select Alternative Subject Name First or Subject Name First.
	 Local Certificate - Select a certificate from the dropdown list. Local certificates are managed using Certificate Management >> Local Certificate.
-	Medium - Authentication Header (AH) means data will be authenticated, but not be encrypted. By default, this option is active.
	High - Encapsulating Security Payload (ESP) means payload (data) will be encrypted and authenticated. You may select encryption algorithm from Data Encryption Standard (DES), Triple DES (3DES), and AES.
Import OpenVPN	Select to import an OpenVPN configuration file from a

config file	specified OpenVPN server (e.g., Vigor router, PC, other VPN provider and etc.) onto to Vigor router. Later, as a VPN client, this router can access into VPN server via the username and password.
User Name	This field is used to authenticate for connection when you select PPTP or L2TP with or without IPsec policy above. The length of the user name is limited to 11 characters.
Password	This field is used to authenticate for connection when you select PPTP or L2TP with or without IPsec policy above. The length of the password is limited to 11 characters.
Remote Network IP	Please enter one LAN IP address (according to the real location of the remote host) for building VPN connection.
Remote Network Mask	Please enter the network mask (according to the real location of the remote host) for building VPN connection.
Local Network IP	Enter the local network IP for TCP / IP configuration.
Local Network Mask	Enter the local network mask for TCP / IP configuration.

3. After you have entered all the required information, click Next to proceed to the confirmation page. The confirmation page shows a summary of all the settings. If you need to make adjustments to the settings, click Back to return to the previous page. Otherwise, select one of the following actions and click Finish to save the changes to the LAN-to-LAN VPN profile.

Item	Description
Go to the VPN Connection Management	Proceed to VPN and Remote Access>>Connection Management to manage VPN sessions.
Do another VPN Client Wizard Setup	Rerun the VPN Client Wizard to configure another LAN-to-LAN VPN profile.

View more detailed	Open this profile in VPN and Remote Access>>LAN to LAN
configuration	to make additional configuration changes.

V-1-2 VPN Server Wizard

The VPN Server Wizard can be used to set the router up as a *server* that accepts inbound VPN connections from a VPN server using a LAN-to-LAN VPN tunnel.

Site-to-Site (LAN-to-LAN)

- A connection between two router's LAN networks.
- Allows employees in branch offices and head office to share the same network resources.

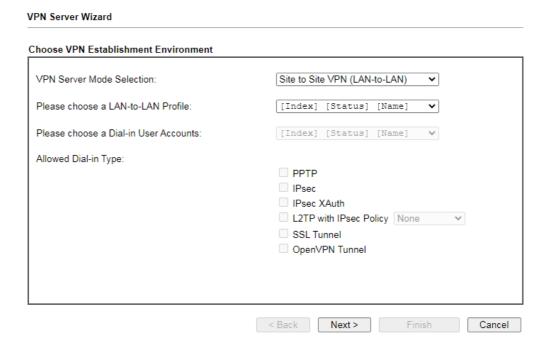

Remote Access (Remote Dial-in)

- A connection between the remote host and router's LAN network. The host will use an IP address in the local subnet.
- Allows employees to access the company's internal resources when they are traveling.

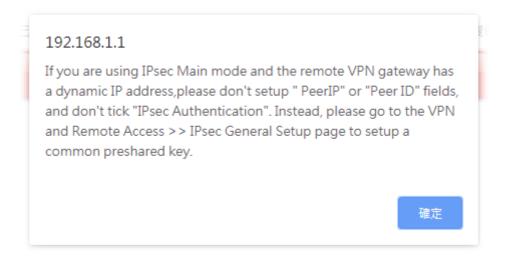

The wizard will guide you step by step through the setup process.

1. On the menu bar, click on Wizards, and then VPN Server Wizard.

Item	Description
VPN Server Mode Selection	Type of VPN Server to be configured. Site to Site VPN (LAN-to-LAN) - Configures the VPN server for inbound connections from other routers. Remote Dial-in User (Teleworker) - Configures VPN server for inbound connections from remote users.
Please choose a LAN-to-LAN Profile	If the VPN Server Mode selected was Site to Site VPN (LAN-to-LAN), choose a LAN-to-LAN profile to store this configuration.
Please choose a Dial-in User Accounts	If the VPN Server Mode selected was Remote Dial-in User (Teleworker), choose a Dial-in user profile to store this configuration.
Allowed Dial-in Type	Select all VPN protocols that are allowed for this LAN-to-LAN Profile or Dial-in User Account. Different Dial-in Type will lead to different configuration page. In addition, adjustable items for each dial-in type will be changed according to the VPN Server Mode (Site to Site VPN and Remote Dial-in User) selected.

- 2. After making the choices for the server profile, please click Next.
- 3. The following dialog box appears, reminding you to not configure IPsec fields if the remote location has a dynamic IP address.

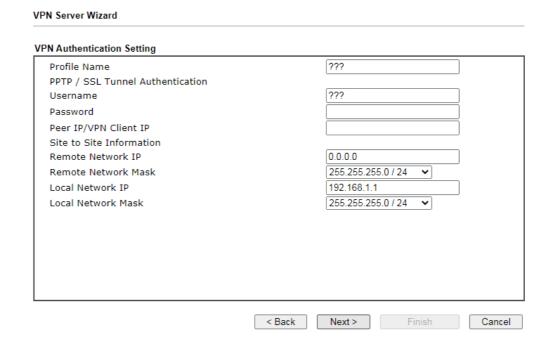

Click OK to dismiss the dialog box and proceed to the next page.

If you have chosen to configure a LAN-to-LAN VPN profile, proceed to step 4.

If you have chosen to configure a Remote Dial-in User VPN profile, proceed to step 5.

4. The Site to Site VPN (LAN-to-LAN) configuration page appears as follows if you have selected PPTP/SSL.

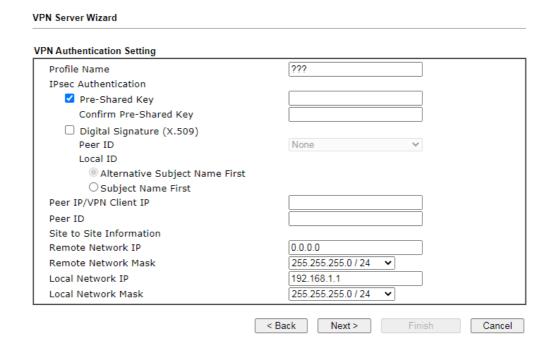

If you have selected PPTP & IPsec & L2TP (three types) or PPTP & IPsec (two types) or L2TP with Policy (Nice to Have/Must), the following configuration screen appears.

VPN Server Wizard

7. Click Finish to save the profile, or Back to make changes, or Cancel to exit the wizard without saving.

V-1-3 Remote Access Control

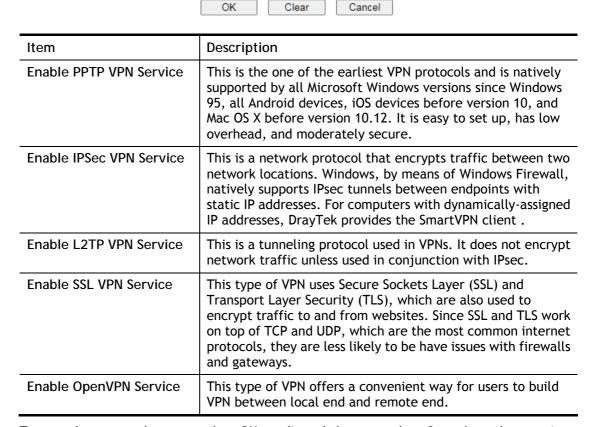

The Vigor router supports several protocols for VPNs, all of which can be enabled or disabled independently of one another.

If you intend to run a VPN server inside your LAN, you should disable the VPN service of Vigor Router to allow VPN tunnel pass through, as well as the appropriate NAT settings, such as DMZ or open port. Open VPN and Remote Access>>Remote Access Control.

VPN and Remote Ac	VPN and Remote Access >> Remote Access Control Setup	
Remote Access Cor	trol Setup	
	Enable PPTP VPN Service	
	Enable IPSec VPN Service	
	Enable L2TP VPN Service	
	Enable SSL VPN Service	
	Enable OpenVPN Service	

Note

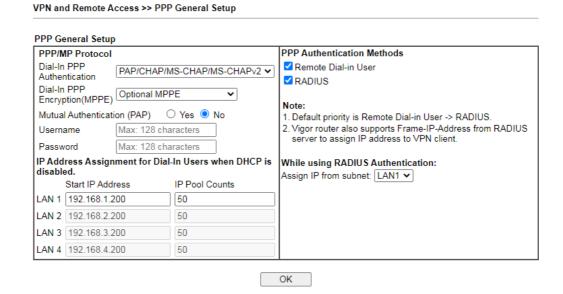

To allow VPN pass-through to a separate VPN server on the LAN, disable any services above that use the same protocol and ensure that NAT <u>Open Ports</u> or <u>Port Redirection</u> is also configured.

To save changes on the page, select OK; to discard changes, select Cancel; to clear settings on this page and revert to default settings, select Clear.

V-1-4 PPP General Setup

This page allows configuration of Point-to-Point Protocol (PPP) used by PPTP and L2TP VPN connections. From the Main Menu select VPN and Remote Access >> PPP General Setup to bring up the following configuration page.

Item	Description
Dial-In PPP Authentication	PAP Only - Authenticate dial-in users using the PAP protocol only.
	PAP/CHAP/MS-CHAP/MS-CHAPv2 - Attempt to authenticate dial-in users using various CHAP protocols, and if the remote VPN client fails to authenticate, fall back to PAP.
Dial-In PPP Encryption (MPPE)	Specifies if PPP encryption (MPPE) is to be used for dial-in VPN connections.
	Optional MPPE - MPPE is optional. If the VPN client supports MPPE, PPP data will be encrypted.
	Require MPPE (40/128bits) - Require PPP encryption for dial-in VPN connections. Both 40- and 128-bit encryption schemes are allowed. The remote dial-in user will use 40-bit to perform encryption prior to using 128-bit for encryption. In other words, if 128-bit MPPE encryption method is not available, then 40-bit encryption scheme will be applied to encrypt the data. Maximum MPPE - Require 128-bit PPP encryption for all dial-in VPN connections.
Mutual Authentication (PAP)	Specifies if mutual authentication is to be used. Some VPN peers (e.g., certain Cisco routers) require bi-directional authentication used for providing stronger security. When mutual authentication is enabled, Username and Password fields should also be populated using values from the VPN peer. The maximum lengths of these fields are 23 and 19 characters, respectively. Yes - Enable mutual authentication.

	No - Disable mutual authentication.
IP Address Assignment for Dial-In Users when DHCP is disabled	LAN1 - When the router's DHCP server is disabled, the router will assign IP addresses to dial-in VPN users starting with the IP address specified in Start IP Address. The total number of dial-in VPN IP addresses to be given out is specified in IP Pool Counts.
	LAN2 ~ LAN4 will be available if it is enabled. Refer to LAN>>General Setup for enabling the LAN interface.
PPP Authentication Methods	The credentials to be used for PPP authentication will be obtained from the selected sources, in the following order: Remote Dial-in User - The usernames and passwords in VPN and Remote Access >> Remote Dial-in User section will be used. RADIUS - An external RADIUS server is to be used for authentication. Please be sure to set up the RADIUS server in Applications >> RADIUS/TACACS+ section.
While using Radius or LDAP Authentication	When the dial-in VPN user is authenticated using credentials from the Remote Dial-in User section, an IP address from the LAN specified in the user profile will be assigned. When the user is authenticated using credentials from other sources (RADIUS), the assigned IP address will be drawn from the address pool of the LAN specified here.

To save changes on the page, select OK.

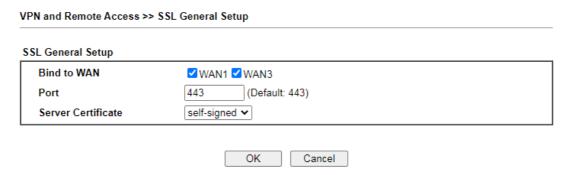

V-1-5 SSL General Setup

SSL VPN (Secure Sockets Layer virtual private network) is a form of VPN that encrypts traffic using SSL, which is the same technology used on secured websites. Because of SSL's prominence as an encryption protocol on the Internet, most networks have few restrictions on SSL traffic, and as a result SSL VPN is more likely to work when other VPN technologies experience difficulties due to obstacles such as firewalls and Network Address Translation (NAT).

In short,

- It is not necessary for users to preinstall VPN client software for executing SSL VPN connection.
- There are less restrictions for the data encrypted through SSL VPN in comparing with traditional VPN.

This page determines the general configuration for SSL VPN Server and SSL Tunnel.

Available settings are explained as follows:

Item	Description	
Bind to WAN	Select the WAN interfaces to accept inbound SSL VPN connections.	
Port	The port to be used for SSL VPN server. This is separate from the management port (HTTPS Port) which is configured in System Maintenance>>Management. The default setting is 443.	
Server Certificate	Specify the certificate to be used for SSL connections. Select a certificate from imported or generated certificates on the router, or choose Self-signed to use the router's built-in default certificate. The selected certificate can be used in SSL VPN server and HTTPS Web Proxy.	

To save changes on this page, select OK; to discard changes, select Cancel.

V-1-6 IPsec General Setup

In IPsec General Setup, there are two major parts of configuration.

There are two phases of IPsec.

- Phase 1: negotiation of IKE parameters including encryption, hash, Diffie-Hellman parameter values, and lifetime to protect the following IKE exchange, authentication of both peers using either a Pre-Shared Key or Digital Signature (x.509). The peer that starts the negotiation proposes all its policies to the remote peer and then remote peer tries to find a highest-priority match with its policies. Eventually to set up a secure tunnel for IKE Phase 2.
- Phase 2: negotiation IPsec security methods including Authentication Header (AH) or Encapsulating Security Payload (ESP) for the following IKE exchange and mutual examination of the secure tunnel establishment.

There are two encapsulation methods used in IPsec, Transport and Tunnel. The Transport mode will add the AH/ESP payload and use original IP header to encapsulate the data payload only. It can just apply to local packet, e.g., L2TP over IPsec. The Tunnel mode will not only add the AH/ESP payload but also use a new IP header (Tunneled IP header) to encapsulate the whole original IP packet.

AH (Authentication Header) provides data authentication and integrity for IP packets passed between VPN peers. This is achieved by a keyed one-way hash function to the packet to create a message digest. This digest will be put in the AH and transmitted along with packets. On the receiving side, the peer will perform the same one-way hash on the packet and compare the value with the one in the AH it receives.

ESP (Encapsulating Security Payload) is a security protocol that provides data confidentiality and protection with optional authentication and replay detection service.

IKE Authentication Method	
Certificate	None 🕶
Preferred Local ID	Alternative Subject Name ▼
General Pre-Shared Key	Max: 128 characters
Confirm General Pre-Shared Key	Max: 128 characters
XAuth User Pre-Shared Key	Max: 63 characters
Confirm XAuth User Pre-Shared Key	Max: 63 characters
Psec Security Method	
	Encryption: AES/3DES/DES

Dusic O'Medidin O'riigin	DH Group: G21/G20/G19/G14/G5/G2/G1 AH:

Item	Description

IKE Authentication Method

This usually applies to those are remote dial-in user or node (LAN-to-LAN) which uses dynamic IP address and IPsec-related VPN connections such as L2TP over IPsec and IPsec tunnel. There are two methods offered by Vigor router for you to authenticate the incoming data coming from remote dial-in user, Certificate (X.509) and Pre-Shared Key.

Certificate - X.509 certificates can be used for IKE authentication. To set up certificates on the router, go to the Certificate Management section.

Preferred Local ID - Specify the preferred local ID information (Alternative Subject Name First or Subject Name First) for IPsec authentication while the client is using the general setting (without a specific Peer IP or ID in the VPN profile).

General Pre-Shared Key- Define the PSK key for general authentication.

Confirm General Pre-Shared Key- Re-enter the characters to confirm the pre-shared key.

XAuth User Pre-Shared Key - Define the PSK key for IPsec XAuth authentication.

Confirm XAuth User Pre-Shared Key- Re-enter the characters to confirm the pre-shared key for IPsec XAuth authentication.

Note: Any packets from the remote dial-in user which does not match the rule defined in VPN and Remote Access>>Remote Dial-In User will be applied with the method specified here.

IPsec Security Method

Available mthods include Basic, Medium and High. Each method offers different encryption, HMAC and DH Group.

Basic - Authentication Header (AH) means data will be authenticated, but not be encrypted. By default, this option is active.

Medium - When this option is selected, the Authentication Header (AH) protocol can be used to provide authentication to IPsec traffic.

High - When this option is selected, the Encapsulating Security Payload (ESP) protocol can be used to provide authentication and encryption to IPsec traffic. Three encryption standards are supported for ESP: DES, 3DES and AES, in ascending order of security.

To save changes on the page, select OK; to discard changes, select Cancel.

V-1-7 IPsec Peer Identity

This screen allows creating profiles of subject alternative names (SANs) and distinguished names/subject names that can be used for IPsec peer authentication in LAN-to-LAN or remote user dial-in VPN connections.

Item	Description
Enable this account	Check to enable such account profile.
Profile Name	A name that allows you to identify this profile. The maximum length of the name you can set is 32 characters.
Accept Any Peer ID	When this option is selected, the router accepts any subject alternative name or subject name as valid, regardless of the type and value.
Accept Subject Alternative Name	When this option is selected, the router accepts the type and value of the specified subject alternative name as valid authentication. Supported subject alternative types are IP Address, Domain Name and E-Mail.
Accept Subject Name	When this option is selected, the router performs peer authentication by matching the values of the different subject name fields. These fields include Country (C), State (ST), Location (L), Organization (O), Organization Unit (OU), Common Name (CN), and Email (E).

To save changes on the page, select OK; to discard changes, select Cancel; to clear settings on this page and revert to default settings, select Clear.

V-1-8 VPN Matcher Setup

Normally, to establish VPN connection, at least one peer must have a public IP address. The VPN Matcher server can help two Draytek routers behind NAT establish a secure VPN tunnel for data transmission between each other. Refer to the following figure.

There is one limitation for the VPN connection. Both routers must be behind a cone NAT, but not symmetric NAT.

Go to VPN and Remote Access>>VPN Matcher Setup to open the following page.

VPN and Remote Access >> VPN Matcher Setup

Item	Description
Enable / Disable	Click to enable / disable the function of VPN Matcher Setup.
VPN Matcher Server	The IP address of the DrayTek VPN Matcher server is defined as "vpn-matcher.draytek.com" with the port number "31503".
Router List Key	Enter the authentication key for finding a Vigor router with the same group of this device from the VPN matcher server. Then set a VPN link between Vigor routers on both ends via

	VPN wizard.
OK	Click to save the settings.
STUN Server	Detect - Click to check if the NAT used by Vigor router is core NAT or not. If not, no VPN can be established.
Group Device List	Get List - After entering the Authkey above, click to get available Vigor router which is within the same group as this device.

V-1-9 OpenVPN

The OpenVPN protocol utilizes public keys, certificates, and usernames and passwords to authenticate the client. Traffic is carried over secure channels built upon industry-standard SSL/TLS encryption protocols.

With integrating of OpenVPN, Vigor router can help users to achieve more robust, reliable and secure private connections for business needs.

OpenVPN offers a convenient way for users to build a VPN between the local end and the remote end. There are two advantages of OpenVPN:

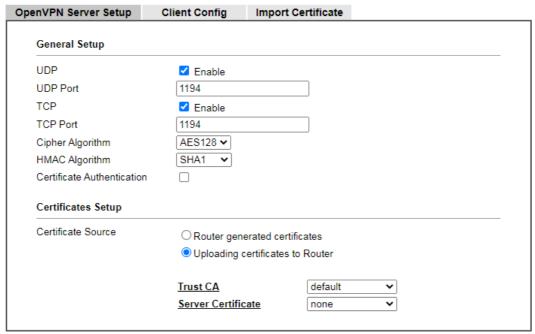

- It can be operated on different systems such as Windows, Linux, and MacOS.
- Based on the standard protocol of SSL encryption, OpenVPN can provide you with a scalable client/server mode, permitting multi-client to connect to a single OpenVPN Server process over a single TCP or UDP port.

In terms of credentials, the administrator can choose to let the router generate the certificates, or import certificates issued by third-party certificate authorities (CAs). When the router generates the certificates, it acts as the root CA to issue the trusted CA certificates (stored under Certificate Management >> Trusted CA Certificate), which are used to generate the server and client certificates used by OpenVPN (stored under Certificate Management >> Local Certificate). If, however, a certificate issued by a third-party CA is used, both the CA's certificate and the issued certificate need to be imported to the router in the Trusted CA Certificate and Local Certificate sections, respectively.

V-1-9-1 OpenVPN Server Setup

OpenVPN requires the use of certificates. Before establishing OpenVPN connection, general settings for OpenVPN service shall be configured first.

Note: OpenVPN on Vigor Router only support TUN device interface currently. So please setup corresponding configurations on the client side.

OK

Item	Description
General Setup	
UDP	Enable - Select checkbox to enable UDP protocol for OpenVPN connections. UDP Port - Enter the UDP port number.
	·
TCP	Enable - Select checkbox to enable TCP protocol for OpenVPN connections.
	TCP Port - Enter the TCP port number.
Cipher Algorithm	Select the desired cipher algorithm. Two encryption algorithms are supported: AES128 and AES256. AES256 is more secure than AES128 but may result in lower performance because it incurs higher computational overhead.
HMAC Algorithm	HMAC stands for Hash-based Message Authentication Code. It is used to validate the data integrity and authenticity of the VPN data.
	Select the desired HMAC hash algorithm. Two hash algorithms, SHA1 and SHA256, are supported. SHA256 is preferred as it is more robust and reliable than SHA1.
Certificate Authentication	Select this checkbox if you would like to validate that the client certificate was issued by a trusted CA.
Certificate Setup	
Certificate Source	Select a source for the certificate to be used for OpenVPN.
	Router generated certificates - Router-generated

certificates that will be used for OpenVPN.

- GENERATE Click to generate a certificate.
- Delete all certificate Click to remove all certificates generated by the router.

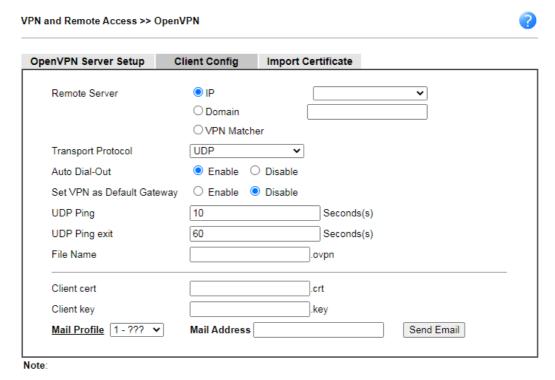

Uploading certificates to Router - Third-party certificates will be used for OpenVPN.

- Trust CA Use the dropdown list to select a trusted CA certificate that has already been uploaded to the router. To upload Trusted CA certificates to the router, click the Trust CA label and you will be taken to the Certificate Management >> Trusted CA Certificate page to perform the operation.
- Server Certificate Use the dropdown list to select a server certificate that has already been uploaded to the router. To upload server certificates to the router, click the Server Certificate label and you will be taken to the Certificate Management >> Local Certificate page to perform the operation.

After finishing all the settings here, please click OK to save the configuration.

V-1-9-2 Client Config

On this page, you can create and export the configuration required for a remote OpenVPN client to connect to the router.

- 1. Please make sure the Client cert and the Client key are located in the same folder with .ovpn file. 2. Please make sure that WAN can be used as OpenVPN server.

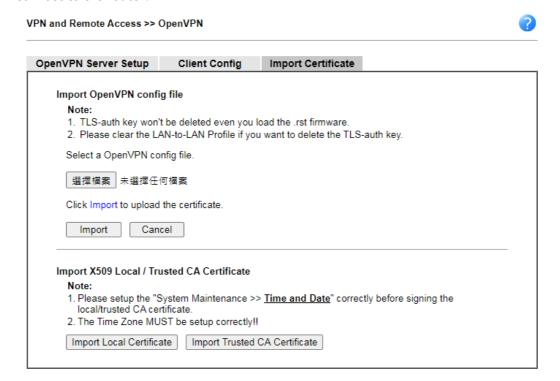

Export

Item	Description
Remote Server	The OpenVPN client will use the IP address or domain name to connect to the router. Select either IP or Domain.
	IP - The OpenVPN configuration file will use the numeric IP address as the server address.
	Domain - The OpenVPN configuration file will use the domain as the server address. You need to ensure that the domain resolves to the IP address of a router WAN port.
	VPN matcher - The OpenVPN configuration file will use the VPN matcher as the server address.
Transport Protocol	Select UDP or TCP for the protocol to be used by the OpenVPN client to connect to the router.
Auto Dial-Out	Enable - If selected, the remote client can auto-dial to this Vigor router to build an OpenVPN tunnel. Disable - Select to disable the function.
Set VPN as Default Gateway	Enable - If selected, the Vigor router will be treated as a "default" gateway for OpenVPN clients. The OpenVPN client will redirect all the traffic to the Vigor router via the OpenVPN tunnel. Disable - Select to disable the function.
LIDD D'	
UDP Ping	Ping remote device over the UDP control channel, if no packets have been sent for the number of seconds configured

	here.	
UDP Ping exit	Let OpenVPN exit after the seconds set here if no reception of a ping or other packet from the remote device.	
File Name	Enter the filename of the configuration file to be downloaded from the router.	
Client cert	Enter the filename of the client certificate obtained from 3rd party provider.	
Client key	Enter the filename of the private key obtained from the 3rd party provider.	
Mail Profile	The system administrator can send an email containing the OpenVPN client configuration to someone who needs it. Later, the recipient can use the configuration to connect to the company's Intranet. It is useful and convenient for Smart VPN Client user or employee on a business trip. Mail Address - Enter the IP address of the recipient.	
	Send Email - After clicking this button, the recipient will receive an email with the content of OpenVPN client configuration.	
Export	Click this button to download the settings on this page as a file, which can be imported into a VPN client to establish OpenVPN connections.	

V-1-9-3 Import Certificate

On this page, you can import the certificate from other places for a remote OpenVPN client to connect to the router.

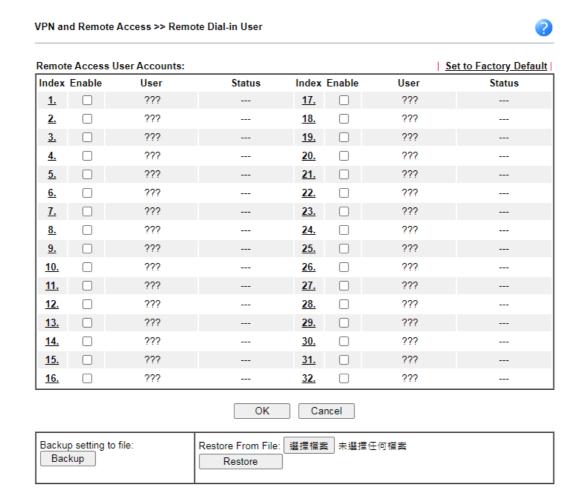

Item	Description
Select an OpenVPN config file	Browse - Click to select a file. Import - Click to import a configuration file.
Import Local Certificate	Click to access into Local Certificate page for importing a certificate.
Import Trusted CA Certificate	Click to access into Trusted CA Certificate page for importing a certificate.

V-1-10 Remote Dial-in User

You can manage remote access by maintaining a table of remote user profiles, so that users can be authenticated via VPN connection.

Remote dial-in user profiles can be set up on this screen.

Item	Description
Set to Factory Default	Click to clear all remote-dial-in user profiles.
Index	Click the index number of the profile the view or edit its settings.
Enable	Check to enable the user profile.
User	Display the username for the specific dial-in user of the LAN-to-LAN profile. The symbol ??? represents that the profile is empty.
Status	Shows the LAN subnet and IP address assignment method. Example: LAN1-DHCP means that the IP address of the VPN connection will be drawn from the DHCP pool of the LAN1 subnet.
	The color of the status indicates the current state of the profile:
	Green - Profile is being used by a dial-in VPN connection.

	Red - Profile is not being used. Black - Profile is disabled.
Backup	Click Backup to save the configuration.
Restore	Click Select to choose a configuration file. Then click Restore to apply the file.

To save changes on the page, select OK; to discard changes, select Cancel.

The following setup screen is shown after a profile index has been clicked.

VPN and Remote Access >> Remote Dial-in User Index No. 1 User account and Authentication Username \Box Enable this account Password Max: 128 characters ✓ Multiple Concurrent Connections Allowed ☐ Enable Mobile One-Time Passwords(mOTP) Idle Timeout 300 second(s) PIN Code 4~7 digits 16~32 digits Secret Allowed Dial-In Type ☐ PPTP **IKE Authentication Method** ✓ IPsec Tunnel Pre-Shared Key ✓ IKEv1/IKEv2 ✓ IKEv2 EAP ✓ IPsec XAuth Max: 128 characters IKE Pre-Shared Key ✓ L2TP with IPsec Policy Must ☐ Digital Signature(X.509) SSL Tunnel None ∨ ✓ OpenVPN Tunnel IPsec Security Method ☐ Specify Remote Node Medium(AH) Remote Client IP High(ESP) DES 3DES AES Local ID (optional) or Peer ID Netbios Naming Packet ● Pass ○ Block Schedule Profile Multicast via VPN O Pass O Block ✓ , None None ✓ , None ✓ |, None (for some IGMP,IP-Camera,DHCP Relay..etc.) Subnet LAN 1 🕶 Assign Static IP Address 0.0.0.0

Note:

- 1. Username can not contain characters ' " and \\.
 2. OpenVPN tunnel does not support mOTP.
 3. When your are trying to use OpenVPN tunnel and the router is behind NAT, you may have to enable the <u>VPN-Matcher</u> feature to bypass the NAT.
- 4. VPN-Matcher can only be used behind Cone NAT.

Item	Description
User account and Authentication	Enable this account - Select to enable this profile to be used by remote dial-in users.
	Multiple Concurrent Connections Allowed - If enabled, multiple VPN clients can connect the VPN server with the username/password set on this profile.
	Idle Timeout - Allowed idle time before the router disconnects the VPN connection. Default timeout value is 300 seconds.
Allowed Dial-In Type	Select all VPN protocols allowed for this profile. For L2TP, specify how IPsec should be applied. Options are:

- None IPsec cannot be used with L2TP connections.
- Nice to Have IPsec is preferred but not mandatory for L2TP connections.
- Must IPsec is required when establish L2TP connections.

Specify Remote Node - The IP address of the remote VPN client (Remote Client IP) or the Peer ID (used in IKE aggressive mode) can be optionally specified. The router will reject the connection if either of these values are entered in the profile but the remote client does not pass the value, or passes the wrong value.

Netbios Naming Packet - Specifies whether to allow NetBIOS naming packets to traverse through the VPN tunnel.

- Pass Click it to have an inquiry for data transmission between the hosts located on both sides of VPN Tunnel while connecting.
- Block When there is conflict occurred between the hosts on both sides of VPN Tunnel in connecting, such function can block data transmission of Netbios Naming Packet inside the tunnel.

Multicast via VPN - Specifies whether to allow multicast packets to traverse through the VPN tunnel.

- Pass Click this button to let multicast packets pass through the router.
- Block This is default setting. Click this button to let multicast packets be blocked by the router.

Subnet

The VPN client will receive an IP address from the DHCP pool or IP address range specified in IP Address Assignment for Dial-In Users for the selected LAN subnet.

Assign Static IP Address - Alternatively, a static IP address can be set by selecting the Assign Static IP Address checkbox.

User Name - Used for PPTP, L2TP or SSL Tunnel dial-in type. The length of the name is limited to 23 characters.

Password - Used for PPTP, L2TP or SSL Tunnel dial-in type. The length of the password is limited to 19 characters.

Enable Mobile One-Time Passwords (mOTP) - Select to enable one-time passwords (Mobile-OTP). Enter the PIN Code and Secret. DrayTek's SmartVPN client has built-in support for mOTP. Third-party mOTP clients can be used to generate passwords when using other VPN clients. For more information on mOTP, visit Mobile-OTP's homepage.

- PIN Code Enter the code for authentication (e.g, 1234).
- Secret Use the 32 digit-secret number generated by mOTP in the mobile phone (e.g., e759bb6f0e94c7ab4fe6).

IKE Authentication Method

Pre-Shared Key - This checkbox is available when Remote Client IP or Peer ID is specified. Check the checkbox and click IKE Pre-shared Key to enter an IKE PSK (1~63 characters) that will be used only for this profile.

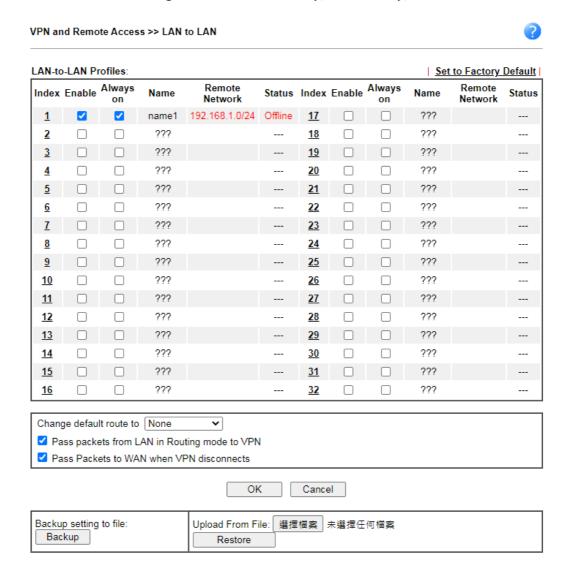

Digital Signature (X.509) - To enable authentication using X.509 Peer IDs, check the checkbox then select an X.509 profile. X.509 profiles can be configured in VPN and Remote Access >> IPsec Peer Identity.

IPsec Security Method	Select all the IPsec protocols that are allowed to be used for this profile.
	Medium-Authentication Header (AH) means data will be authenticated, but not be encrypted. By default, this option is invoked. You can uncheck it to disable it.
	High (ESP) - High-Encapsulating Security Payload (ESP) means payload (data) will be encrypted and authenticated. You may select encryption algorithm from Data Encryption Standard (DES), Triple DES (3DES), and AES.
	Local ID (Optional)- Specify a local ID to be used when establishing a LAN-to-LAN VPN connection using IKE aggressive mode.
Schedule Profile	Set the VPN connection to work at certain time interval only. You may choose up to 4 schedules out of the 15 schedules pre-defined in Applications >> Schedule setup. The default setting of this field is blank and the function will always work.

To save changes on the page, select OK; to discard changes, select Cancel; to clear settings on this page and revert to default settings, select Clear.

V-1-11 LAN to LAN

This section allows you to configure up to 32 LAN-to-LAN VPN connections. LAN-to-LAN connections can be configured to allow dial-in only, dial-out only, or both dial-in and dial-out.

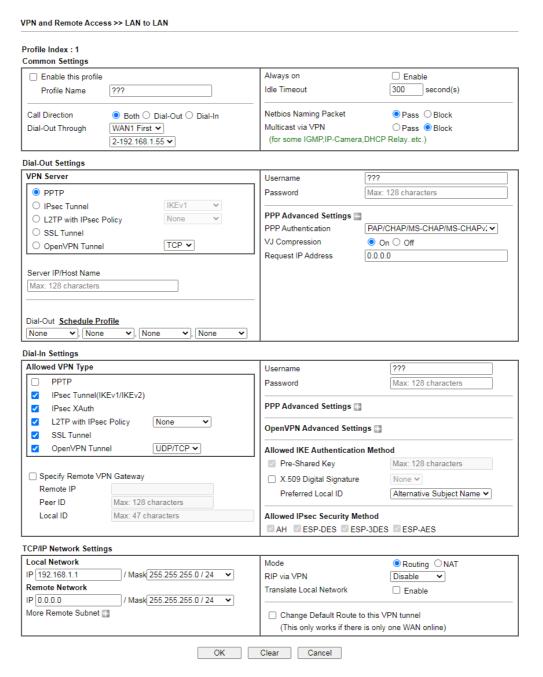

Item	Description
Set to Factory Default	Click to clear all indexes.
Index	Click the index number of the profile to view or edit its settings.
Enable	Check to enable the LAN-to-LAN VPN profile.
Always On	Check to make the dial-out connection always on.
Name	Displays the name of the LAN-to-LAN profile. The symbol ??? represents that the profile is empty.
Remote Network	Displays the name of the remote network.
Status	Shows the status of the profile. Online - LAN-to-LAN VPN is connected.

	Offline - LAN-to-LAN VPN is disconnected Profile is disabled.
Change default route to	Select a profile as the default route.
Pass packets from LAN in Routing mode to VPN	If enabled, the packets from LAN will pass through the VPN tunnel.
Pass Packets to WAN when VPN disconnects	If enabled, the packets can pass through via WAN when the VPN disconnects.
Backup	Click Backup to save the configuration.
Restore	Click Select to choose a configuration file. Then click Restore to apply the file.

To edit each profile, click each index to edit each profile.

1. The setup screen is shown after a profile index has been clicked. There are 6 sections: Common Settings, Dial-Out Settings, Dial-In Settings, and TCP/IP Network Settings.

Item	Description
Common Settings	Enable this profile - Select to enable the profile.
	Profile Name - Specify a name that allows you to identify this profile.
	Call Direction - Specify the allowed call direction of this LAN-to-LAN profile. Four choices are available for connection mode:
	 Both - Profile is to be used to initiate (dial out) or accept (dial in) connections.
	 Dial-Out - Profile is to be used to initiate outgoing connections.
	 Dial-In - Profile is to be used to accept incoming connections.

Dial-Out Through - Select the WAN connection for connections made using this profile. This setting is useful for dial-out only.

- WANx First While connecting, the router will use WANx as the first channel for VPN connection. If WANx fails, the router will use another WAN interface instead.
- WANx Only While connecting, the router will use WANx as the only channel for VPN connection.

Always On - Select this option to maintain an always on dial-out connection.

Idle Timeout - The router will close connection if no activity is observed in the VPN connection for this many seconds. Default value is 300 seconds.

Netbios Naming Packet - Specifies whether to allow NetBIOS naming packets to traverse through the VPN tunnel.

- Pass click it to have an inquiry for data transmission between the hosts located on both sides of VPN Tunnel while connecting.
- Block When there is conflict occurred between the hosts on both sides of VPN Tunnel in connecting, such function can block data transmission of Netbios Naming Packet inside the tunnel.

Multicast via VPN - Specifies whether to allow multicast packets to traverse through the VPN tunnel.

- Pass Click this button to let multicast packets pass through the router.
- Block This is default setting. Click this button to let multicast packets be blocked by the router.

Dial-Out Settings

VPN Server - Select the VPN protocol to be used.

Server IP/Host Name - IP address or DNS host name of remote VPN host.

Dial-Out Schedule Profile - Connect and disconnect according to schedule profiles. The default setting of this field is blank and the function will always work.

User Name - Enter a username for establishing VPN connection.

Password - Enter the password for establishing VPN connection.

PPP Advanced Settings - Click it to expand the advanced settings for PPP.

- PPP Authentication -
 - PAP Only Authenticate dial-in users using the PAP protocol only. PAP/CHAP/MS-CHAP/MS-CHAPv2 Attempt to authenticate dial-in users using various CHAP protocols, and if the remote VPN client fails to authenticate, fall back to PAP.
- VJ compression Specifies whether to enable Van Jacobson (VJ) header compression, which improves throughput on slow connections.
- Request IP Address Enter the IP address.

Dial-In Settings

Allowed VPN Type - Select permissible VPN protocols for dial-in connections.

 PPTP - Allow the remote dial-in user to make a PPTP VPN connection through the Internet. You should set

- the User Name and Password of remote dial-in user below.
- IPsec Tunnel- Allow the remote dial-in user to trigger an IPsec VPN connection through Internet.
- L2TP with IPsec Policy Allow the remote dial-in user to make a L2TP VPN connection through the Internet. You can select to use L2TP alone or with IPsec. Select from below:
 - None Do not apply the IPsec policy. Accordingly, the VPN connection employed the L2TP without IPsec policy can be viewed as one pure L2TP connection.
 - Nice to Have Apply the IPsec policy first, if it is applicable during negotiation. Otherwise, the dial-in VPN connection becomes one pure L2TP connection.
 - Must Specify the IPsec policy to be definitely applied on the L2TP connection.
- SSL/OpenVPN Tunnel- Allow the remote dial-in user to trigger an SSL/OpenVPN VPN connection through Internet.

Specify Remote VPN Gateway - You can specify the IP address of the remote dial-in user or peer ID (should be the same with the ID setting in dial-in type) by checking the box. Also, you should further specify the corresponding security methods on the right side.

If you uncheck the checkbox, the connection type you select above will apply the authentication methods and security methods in the general settings.

Username - This field is applicable when you select PPTP or L2TP with or without IPsec policy above. The length of the name is limited to 11 characters.

Password - This field is applicable when you select PPTP or L2TP with or without IPsec policy above. The length of the password is limited to 11 characters.

PPP Advanced Settings - Click it to expand the advanced settings for PPP.

- VJ Compression Specifies whether to enable Van Jacobson header compression, which improves throughput on slow connections.
- Assign Peer IP Address Enter the IP address of the peer.

Allowed IKE Authentication Method - This section is available when IPsec tunnel is selected as the dial-out protocol. Available options are IKE Pre-shared key and X.509 digital signature.

- Pre-Shared Key To use a pre-shared key, select this radio-button and then click the IKE Pre-Shared Key button to enter the PSK.
- X.509 Digital Signature To use an X.509 digital signature, select this radio button and then select an X.509 IPsec Peer Identity profile. To enable authentication using X.509 Peer IDs. X.509 profiles can be configured in VPN and Remote Access >> IPsec Peer Identity.

Preferred Local ID - Select whether to first match

Subject Alternative Name or Subject Name during authentication.

- Alternative Subject Name The alternative subject name (configured in Certificate Management>>Local Certificate) will be inspected first.
- Subject Name The subject name (configured in Certificate Management>>Local Certificate) will be inspected first.

Allowed IPsec Security Method - This setting is available when IPsec Tunnel is selected as the dial-out protocol.

- AH- Authentication Header (AH) means data will be authenticated, but not be encrypted. Select to use Authentication Header protocol. By default, this option is active.
- ESP-DES/ESP-3DES/ESP-AES Encapsulating Security Payload (ESP) means payload (data) will be encrypted and authenticated. You may select encryption algorithm from Data Encryption Standard (DES), Triple DES (3DES), and AES.

TCP/IP Network Settings

This section configures the whether the local router applies NAT when linking the local network to the remote network, and whether IP address translation occurs when.

The view changes depending on the setting of the field From first subnet to remote network, you have to do. Select NAT if the remote VPN server expects only one IP address on the local network; otherwise, select Route. TCP/IP Network Settings has different settings depending on whether NAT or Route mode is selected.

Local Network - The default value is 0.0.0.0, which means the Vigor router will get a PPP IP address from the remote router during the IPCP negotiation phase. If the PPP IP address is fixed by remote side, specify the fixed IP address here. Do not change the default value if you do not select PPTP or L2TP.

 IP / Mask - Display the local network IP and mask for TCP / IP configuration. You can modify the settings if required.

Remote Network - The default value is 0.0.0.0, which means the Vigor router will get a remote Gateway PPP IP address from the remote router during the IPCP negotiation phase. If the PPP IP address is fixed by remote side, specify the fixed IP address here. Do not change the default value if you do not select PPTP or L2TP.

 IP/ Mask - Add a static route to direct all traffic destined to this Remote Network IP Address/Remote Network Mask through the VPN connection. For IPsec, this is the destination clients IDs of phase 2 quick mode.

More Remote Subnet - Click to bring up a dialog box to enter additional static routes for subnets destined for the remote network.

Mode - If the remote network only allows one IP address for the local network, select NAT; otherwise, select Route.

RIP via VPN - Specifies the direction of Routing Information Protocol (RIP) packets. Available options are:

- TX/RX Both can transmit or receive RIP packets
- TX Only can only transmit but not receive RIP packets
- RX Only can only receive but not transmit RIP packets
- Disable RIP is disabled.

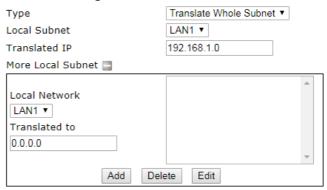

When the Mode is set to Routing

When Routing is selected, the available fields in the TCP/IP Network Settings section will be shown as:

Translate Local Network - Check the box to enable the function. Add a static route to direct all traffic destined to more Remote Network IP Addresses/ Remote Network Mask through the VPN connection. This is usually used when you find there are several subnets behind the remote VPN router.

 Type - There are two types (Translate Whole Subnet, Translate Specific IP) for you to choose.

When Translate Whole Subnet is selected as Type, available settings are listed as below:

- Local Subnet Select the LAN whose IP addresses are to be translated.
- Translated IP Specify an IP address.
- More Local Subnet Click it to add more subnets.

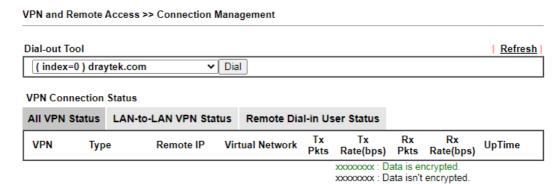

When Translate Specific IP is selected as Type, available settings are listed as below:

2. To save changes on the LAN to LAN profile page, select OK; to reset the entire page to blank, select Clear; to discard changes, select Cancel.

V-1-11 Connection Management

You can initiate outbound LAN-to-LAN VPN sessions, and view and disconnect all current LAN-to-LAN and dial-up VPN sessions.

Item	Description
Refresh	Click to manually reload the page to refresh VPN connection information.
Dial-out Tool	Dial - Click this button to execute dial out function. If the connect is successfully made, it will show up in the VPN Connection Status section below.
VPN Connection Status	VPN - Displays the VPN profile number and the profile name. Type - Displays the VPN protocol used for the connection Remote IP - Displays the remote IP address of the VPN connection.
	Virtual Network - Displays the IP subnet used by the VPN connection.
	Tx Pkts - Displays the number of packets that have been transmitted through the VPN connection.
	Tx Rate(Bps) - Displays the current upstream speed of the VPN connection.
	Rx Pkts - Displays the number of packets that have been received through the VPN connection.
	Rx Rate(Bps) - Displays the current downstream speed of the VPN connection.
	UpTime - Displays the elapsed time of the VPN connection.
	Drop - Click this button to disconnect this VPN connection.

V-2 Certificate Management

A digital certificate is an electronic document issued by a certification authority (CA) to an entity to prove ownership of a public key. It contains identifying information including the issued-to party's name, a serial number, expiration dates etc., and the digital signature of the certificate-issuing authority so that a recipient can verify that the certificate is real. Vigor router supports digital certificates that conform to the X.509 standard.

In this section, you can generate and manage local digital certificates, and import trusted CA certificates. Be sure that the system time is correct on the router so that certificates will not be erroneously considered to be invalid because of an incorrect system time falling outside of the certificate's valid time period. The easiest way to accomplish this is by periodically synchronizing the system time to a Network Time Protocol (NTP) server.

Web User Interface

The image below shows the menu items for Certificate Management.

Certificate Management
Local Certificate
Trusted CA Certificate
Certificate Backup
Self-Signed Certificate

V-2-1 Local Certificate

You can generate, import or view local certificates on this page.

Certificate Management >> Local Certificate

X509 Local Certificate Configuration

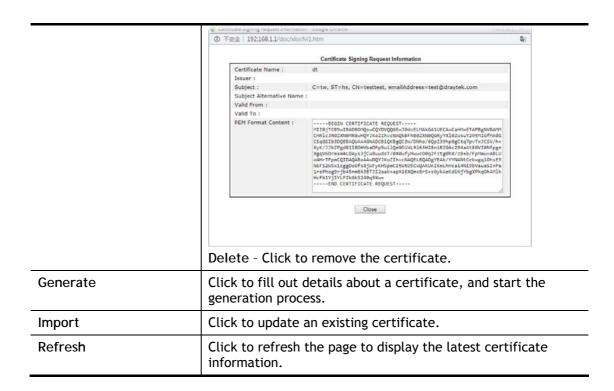

Name	Subject	Status	Modify
			View Delete
			View Delete
			View Delete

Note:

- 1. Please setup the "System Maintenance >> <u>Time and Date</u>" correctly before signing the local certificate.
- 2. The Time Zone MUST be setup correctly!!

Item	Description
Name	Displays the Name that identifies the certificate.
Subject	Displays the Subject Name entries of the certificate.
Status	Displays the status of the certificate. Status is one of Requesting.
Modify	View - Click to view details about the certificate. A screen that looks like the following will be displayed, showing the Subject Name, Subject Alternative Name, and the certificate content.

GENERATE

Use this screen to submit a request to your root CA to generate a certificate.

Certificate Management >> Local Certificate

Item	Description
Certificate Name	Name that identifies the certificate.
Туре	Select the type of Subject Alternative Name and enter its value.

Country (C)	Country in which your organization is located.
State (ST)	State or province where your organization is located.
Location (L)	City where your organization is located.
Organization (O)	Legal name of your organization.
Organization Unit (OU)	Department within your organization that you wish to be associated with this certificate.
Common Name (CN)	Fully-qualified domain name / WAN IP that will be used to reach your server.
Email (E)	Email address of the entry.
Key Type	Key type is hard set to RSA.
Key Size	Choose between 1024 and 2048 bit.
Algorithm	Choose between SHA-1 and SHA-256.
Generate	Click to submit generate request to the CA server.

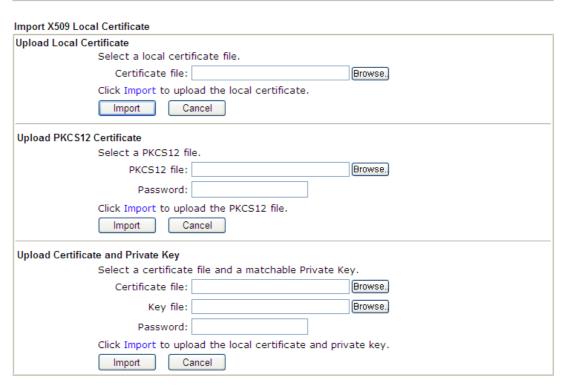

After clicking the Generate button, you will be taken back to the main Local Certificate screen, showing the certificate request in progress:

IMPORT

Vigor router allows you to generate a certificate request and submit it the CA server, then import it as "Local Certificate". If you have already gotten a certificate from a third party, you may import it directly. The supported types are PKCS12 Certificate and Certificate with a private key.

Click this button to import a saved file as the certification information. There are three types of local certificate supported by Vigor router.

Item	Description	
Upload Local Certificate	Certificate file - Click Browse to select a local certificate file. Import - Click to import selected certificate file to router. Cancel - Click to return to the main Local Certificate screen. If you have done well in certificate generation, the Status of the certificate will be shown as "OK".	
	Import X509 Local Certificate Congratulation! Local Certificate has been imported successfully. Please click Back to view the certificate.	
	X509 Local Certificate Configuration Name Subject Status Modify draytekdemo /O=Draytek/OU=Draytek Sales/ OK View Delete View Delete GENERATE IMPORT REFRESH	
Upload PKCS12 Certificate	It allows users to import the certificate whose extensions are usually .pfx or .p12. And these certificates usually need passwords.	
	Note that PKCS12 is a standard for storing private keys and certificates securely. It is used in (among other things) Netscape and Microsoft Internet Explorer with their import and export options.	
	PKCS12 file - Click Browse to select a PKCS12 certificate file.	
	Password - Enter the password associated with the certificate and key files.	
	Import - Click to import selected certificate file to router.	

	Cancel - Click to return to the main Local Certificate screen.
Upload Certificate and Private Key	It is useful when users have separated certificates and private keys. And the password is needed if the private key is encrypted.
	Certificate file - Click Browse to select a local certificate file.
	Key file - Click Browse to select a key file.
	Password - Enter the password associated with the certificate and key files.
	Import - Click to import selected certificate file to router. Cancel - Click to return to the main Local Certificate screen.

If the import was successful, you will see the following confirmation screen:

V-2-2 Trusted CA Certificate

Trusted CA certificate lists three sets of trusted CA certificate. In addition, you can build a RootCA certificate if required.

When the local client and remote client are required to make certificate authentication (e.g., IPsec X.509) for data passing through SSL tunnel and avoiding the attack of MITM, a trusted root certificate authority (Root CA) will be used to authenticate the digital certificates offered by both ends.

However, the procedure of applying digital certificate from a trusted root certificate authority is complicated and time-consuming. Therefore, Vigor router offers a mechanism which allows you to generate root CA to save time and provide convenience for general user. Later, such root CA generated by DrayTek server can perform the issuing of local certificate.

Info

Root CA can be deleted but not edited. If you want to modify the settings for a Root CA, please delete the one and create another one by clicking Create Root CA.

Create, import or export, view root the trusted certificate authority certificates on this page.

No Root CA Existed

Certificate Management >> Trusted CA Certificate

X509 Trusted CA Certificate Configuration

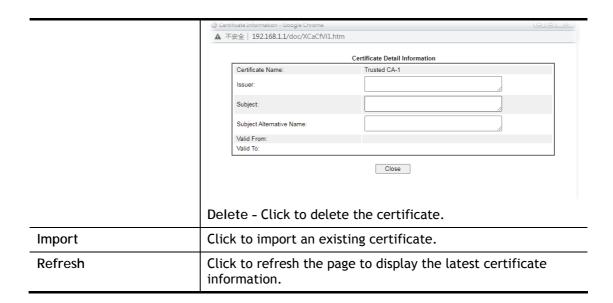

Name	Subject	Status	Modify
			Create Root CA
Trusted CA-1			View Delete
Trusted CA-2			View Delete
Trusted CA-3			View Delete

Note:

- $1. \, Please \, setup \, the \, "System \, Maintenance >> \underline{Time \, and \, Date}" \, correctly \, before \, you \, try \, to \, generate \, a \, RootCA!!$
- 2. The Time Zone MUST be setup correctly!!

Item	Description
Create Root CA	Click to create a new root CA.
Name	Name that identifies the certificate.
Subject	Shows the Subject Name of the certificate.
Status	Displays the status of the certificate.
Modify	Create - Click to fill out details about a certificate, and start the generation process. View - Click to view details of the certificate.

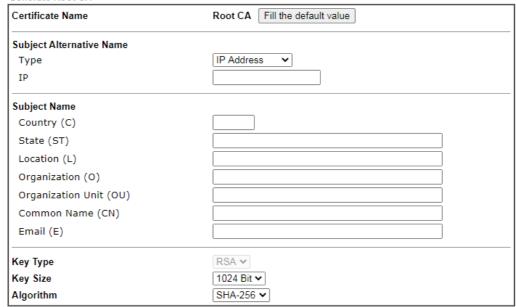

Creating a Root CA

Click Create Root CA to open the following page.

Certificate Management >> Root CA Certificate

Generate Root CA

Generate

Item	Description
Certificate Name	Display the name of root CA. Fill the default value - Click to enter the default value for this Root CA.
Туре	Select the type of Subject Alternative Name and enter its value.
Country (C)	Country in which your organization is located.
State (ST)	State or province where your organization is located.

Location (L)	City where your organization is located.
Organization (O)	Legal name of your organization.
Organization Unit (OU)	Department within your organization that you wish to be associated with this certificate.
Common Name (CN)	Fully-qualified domain name / WAN IP that will be used to reach your server.
Email (E)	Email address of the entry.
Key Type	Key type is hard set to RSA.
Key Size	Choose between 1024 and 2048 bit.
Algorithm	Choose between SHA-1 and SHA-256.
Generate	Click to submit generate request to the CA server.

Importing a Trusted CA

To import a pre-saved trusted CA certificate, please click IMPORT to open the following window.

Import X509 Trusted CA Certificate

Select a trusted CA certificate file.

Browse.

Click Import to upload the certification.

Import Cancel

Item	Description
Browse	Click Browse to select a CA certificate file.
Import	Click to import selected certificate file to router. The one you imported will be listed on the Trusted CA Certificate window.
Cancel	Click to return to the main Trusted CA Certificate screen.

V-2-3 Certificate Backup

You can back up Local and Trusted CA certificates on the router to a file.

Certificate Management >> Certificate Backup

Backup	
Encrypt password: Max: 23 characters	
Confirm password:	
Click Backup to download certificates to	o your local PC as a file.
Restoration	
Restoration Select a backup file to restore.	
Select a backup file to restore.	

Item	Description
Backup	
Encrypt password/Confirm password	Enter the password with which you wish to encrypt the certificate.
Backup	Click to download the certificate.
Restoration	
Select a backup file to restore	Click Browse to select the backup file you wish to restore.
Decrypt password	Enter the password that was used to encrypt the certificates.
Restore	Click to retrieve the certificate.

V-2-4 Self-Signed Certificate

A self-signed certificate is a *unique* identification for the device (e.g., Vigor router) which generates the certificate by itself to ensure the router security. Such self-signed certificate is signed with its own private key.

The self-signed certificate will be applied in SSL VPN, HTTPS, and so on. In addition, it can be created for free by using a wide variety of tools.

Certificate Management >> Self-Signed Certificate

Note

- Please setup the <u>System Maintenance >> Time and Date</u> correctly before you try to regenerate a selfsigned certificate!!
- 2. The Time Zone MUST be setup correctly!!

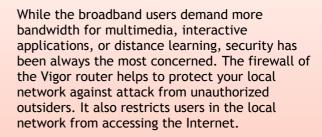

Regenerate

Click Regenerate to open the Regenerate Self-Signed Certificate window. Enter all requested information including certificate name (used to differentiate different certificates), subject alternative name type and relational settings for subject name. Then click GENERATE.

Part VI Security

Firewall

CSM is an abbreviation of Central Security Management which is used to control IM/P2P usage, filter the web content and URL content to reach a goal of security management.

VI-1 Firewall

Basic

A network firewall monitors traffic travelling between networks, with the ability to selectively allow or block traffic using a predefined set of security rules. This helps to maintain the integrity of networks by stopping unauthorized access and the exchange of sensitive information.

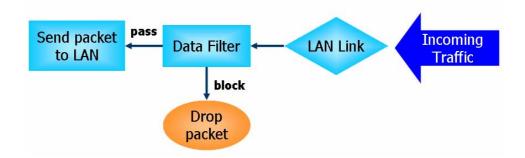

Firewall Facilities

LAN users are provided with secured protection by the following firewall facilities:

- User-configurable IP filter (Data Filter).
- Stateful Packet Inspection (SPI): tracks packets and denies unsolicited incoming data
- Selectable Denial of Service (DoS) / Distributed DoS (DDoS) attacks protection

Data Filter

All traffic, both incoming and outgoing, that does not trigger a PPP connection attempt (either because a PPP connection is not necessary, or the required PPP connection has already been established) is checked against the Data Filter, and will be allowed or blocked according to the rules configured within.

Stateful Packet Inspection (SPI)

Stateful inspection is a firewall architecture that works at the network layer. Unlike legacy static packet filtering, which examines a packet based on the information in its header, stateful inspection builds up a state machine to track each connection traversing all interfaces of the firewall and makes sure they are valid. The stateful firewall of Vigor router not only examines the header information also monitors the state of the connection.

Denial of Service (DoS) Defense

DoS attacks are categorized into two types: flooding-type attacks and vulnerability attacks. Flooding-type attacks attempts to exhaust system resources while vulnerability attacks attempts to paralyze the system by exploiting vulnerabilities of protocols or operation systems.

Vigor's DoS Defense functionality detects DoS attacks and mitigates their damage by inspecting every incoming packet, and malicious packets will be blocked. If Syslog is enabled, alert messages will also be sent. Abnormal traffic flow such as flood and port scan attacks that exceed allowable thresholds are also blocked.

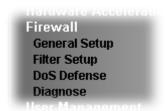

The below shows the attack types that DoS/DDoS defense function can detect:

- 1. SYN flood attack
- 2. UDP flood attack
- 3. ICMP flood attack
- 4. Port Scan attack
- 5. IP options
- 6. Land attack7. Smurf attack
- 8. Trace route

- 9. SYN fragment10. Fraggle attack11. TCP flag scan12. Tear drop attack13. Ping of Death attack14. ICMP fragment15. Unassigned Numbers

Web User Interface

Below shows the menu items for Firewall.

VI-1-1 General Setup

General Setup Page

Firewall >> General Setup

Such page allows you to enable / disable Data Filter, determine general rule for filtering the incoming and outgoing data.

General Setup

Data Filter

Enable

Disable

Allow pass inbound fragmented large packets (required for certain games and streaming)

Enable Strict Security Firewall

Block routing connections initiated from WAN | IPv4 IPv6

Note:

Packets are filtered by firewall functions in the following order:

1.Data Filter Sets and Rules 2.Block routing connections initiated from WAN 3.Default Rule

Note:

This will not backup the detail setting of Quality of Service and Schedule.

Item	Description
Data Filter	Select Enable to activate the Data Filter function, and then choose a Start Filter Set.

Allow pass inbound fragmented large packets	Certain games and video streaming service use fragmented UDP packets to transfer data. Enabling this option allows these applications to function properly.
	If this option is not enabled, the router will attempt to reassemble fragmented packets up to a certain value (e.g., 15xx-2102) kilobytes long. Packets larger than the certain value will be discarded.
	If this option is enabled, the router always passes fragmented packets without reassembling them, regardless of the size of the packet.
Enable Strict Security Firewall	If this option and the Web Content Filter (WCF) are both enabled, web traffic will be blocked if the WCF server fails to respond to lookup requests.
Block routing connections initiated from WAN	IPv6 - IPv6 does not make use of Network Address Translation (NAT), so all LAN hosts receive public IPv6 IP addresses that are exposed to the WAN. Enable this option to block WAN hosts from connecting to LAN hosts using IPv6.
	IPv4 - For LAN hosts receiving WAN IPv4 addresses using the IP routed subnet, enable this option to prevent WAN hosts from connecting to LAN hosts. This option has no effect on LAN hosts on private LAN subnets.
Backup Firewall	Click Backup to save the firewall configuration.
Restore Firewall	Click Select to choose a firewall configuration file. Then click Restore to apply the file.

To save changes on the page, click OK. To discard changes, click Cancel.

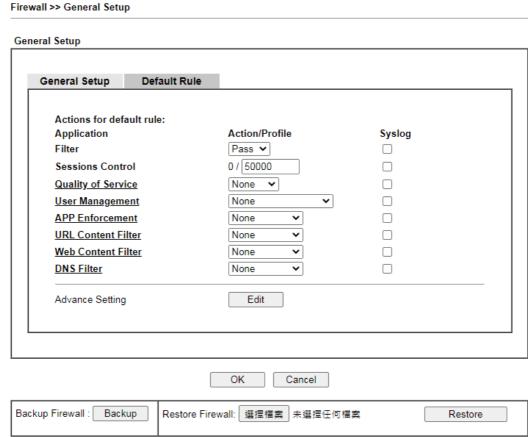

Traffic is filtered by firewall functions in the following order:

- 1. Data Filter Sets and Rules
- 2. Block connections initiated from WAN
- 3. Default Rule

Default Rule Page

Such page allows you to choose filtering profiles including QoS, Load-Balance policy, WCF, APP Enforcement, URL Content Filter, for data transmission via Vigor router.

The default rule applies to all traffic that is not constrained by other filters or rules.

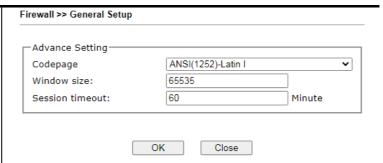

Note:

This will not backup the detail setting of Quality of Service and Schedule.

Item	Description
Filter	Select Pass or Block for the packets that do not match with the filter rules. When the setting is Block, all other fields on the page are disabled because they are not applicable.
Sessions Control	The current number of sessions is shown before the slash, followed by the maximum number of concurrent sessions allowed, which is configurable. The default maximum is 60000, which is also the upper limit of the value.
Quality of Service	Choose one of the QoS rules to be applied as firewall rule. For detailed information of setting QoS, please refer to the related section later.
User Management	This setting is only available when Rule-Based is selected in User Management>>General Setup. The default firewall rule will be applied to the selected user or user group. Refer to the chapter on User Management for more details on the feature. • None: User Management does not apply to the default rule.

The default rule only applies to the User]: Select this to create a new user. The default rule only applies to the selected Group]: Select this to create a new user ault rule applies to all defined users. II ADD E 6
allow APP Enforcement to log messages in
ent Filter profile to be used, or None to ent Filter for the Default Rule. Select m the dropdown list to create a new he chapter on URL Content Filter for more ture.
allow URL Content Filter to log messages in tion is configured at the profile level in t Filter Profile, Log.
tent Filter profile to be used, or None to ent Filter for the Default Rule. Select m the dropdown list to create a new
allow Web Content Filter to log messages in tion is configured at the profile level in the Profile Table section in CSM>>Web offile, Log.
ter profile to be used, or None to disable Default Rule. Select [Create New] from to create a new profile.
allow DNS Filter to log messages in Syslog. configured at the profile level in the DNS e section in CSM>>DNS Filter Profile,
the configuration window for Advanced

Codepage - Sets the codepage used by the URL content filter to match URLs against keywords in profiles. Choosing the appropriate codepage can increase the accuracy of the URL Content Filter. The default value is ANSI 1252 Latin I. If the setting is None, no decoding of URL will be performed.

If you are unsure of which codepage to use, please start the Syslog application, and the recommended codepage will be shown in the Codepage Information tab in the Setup dialog box.

Window size - Sets the TCP window size as described in RFC 1323. Valid values are from 0 to 65535. The more the value is, the better the performance will be. However, if the network is not stable, small value will be proper.

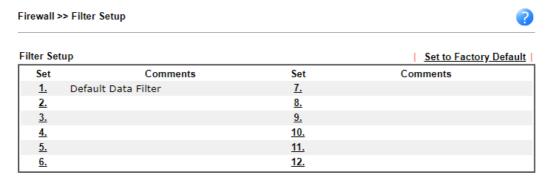

Session timeout - Sets the timeout sessions are allowed to idle before they are removed from the system.

Backup Firewall	Click Backup to save the firewall configuration.
Restore Firewall	Click Select to choose a firewall configuration file. Then click Restore to apply the file.

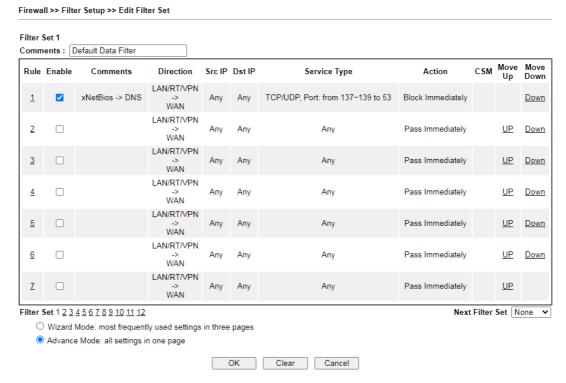

After finishing all the settings here, please click OK to save the configuration.

VI-1-2 Filter Setup

Click Firewall and click Filter Setup to bring up the setup page.

To edit a filter set, click on its set number. The following Filter Set page will be shown. Each filter set contains up to 7 rules.

Item	Description
Filter Rule	To edit the filter rule, click the filter rule number to bring up the Edit Filter Rule page. See the following section for details on the Edit Filter Rule page.
Enable	Select to enable the filter rule.
Comments	Optional comment entered in the settings page to identify the rule.
Direction	Displays the direction of packet.
Src IP / Dst IP	Displays the IP address of source /destination.
Service Type	Displays the type and port number of the packet.

Action	Displays the packets to be passed /blocked.
CSM	Displays the content security managed
Move Up/Down	Use Up or Down link to change the order of the filter rules.
Next Filter Set	Select the filter set for the firewall to process after the current filter set, or None if the current filter set is the last one to be processed. Be careful not to create a loop when setting next filter sets.
Wizard Mode	Allow to configure frequently used settings for filter rule via several setting pages.
Advance Mode	Allow to configure detailed settings of filter rule.

To use Wizard Mode, simple do the following steps:

- 1. Click the Wizard Mode radio button.
- 2. Click Index 1. The setting page will appear as follows:

Filter Set 1 Rule 1 Firewall Rule applies to packets that meet the following criteria Comments: xNetBios -> DNS Direction: LAN/RT/VPN -> WAN Source IP: Any Address Start IP Address 0.0.0.0 End IP Address 0.0.0.0 Subnet Mask 0.0.0.0 Any Address Destination IP: Start IP Address 0.0.0.0 End IP Address 0.0.0.0 0.0.0.0 Subnet Mask TCP/UDP ✓ Protocol: ~ 139 Source Port = 🗸 137 Destination Port = 🗸 53 ~ 53 Finish Back Next Cancel

Firewall >> Edit Filter Set >> Edit Filter Rule Wizard

Item	Description
Comments	Enter filter set comments/description. Maximum length is 14- character long.
Direction	Set the direction of packet flow. Note: RT means routing domain for 2nd subnet or other LAN.
Source/Destination IP	To set the IP address manually, please choose Any Address/Single Address/Range Address/Subnet Address as the Address Type and Enter them in this dialog.
Protocol	Specify the protocol(s) which this filter rule will apply to.

Source Port / Destination Port (=) - when the first and last value are the same, it indicates one port; when the first and last values are different, it indicates a range for the port and available for this service type. (!=) - when the first and last value are the same, it indicates all the ports except the port defined here; when the first and last values are different, it indicates that all the ports except the range defined here are available for this service type. (>) - the port number greater than this value is available. (<) - the port number less than this value is available for

this profile.

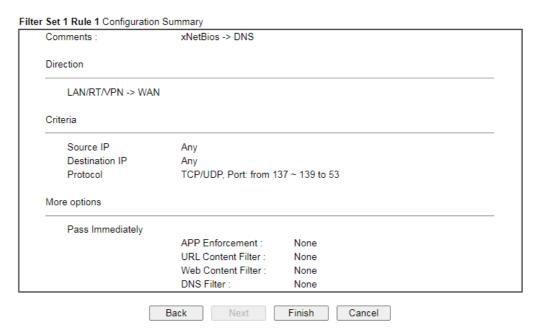

3. Click Next to get the following page.

Available settings are explained as follows:

Item	Description
Pass Immediately	Packets matching the rule will be passed immediately. APP Enforcement - Select an APP Enforcement profile for application blocking, or None to disable APP Enforcement for the Default Rule. Select [Create New] from the dropdown list to create a new profile. Refer to the chapter on APP Enforcement for more details on the feature.
	URL Content Filter - Select a URL Content Filter profile to be used, or None to disable URL Content Filter for the Default Rule. Select [Create New] from the dropdown list to create a new profile. Refer to the chapter on URL Content Filter for more details on the feature.
	Web Content Filter - Select a Web Content Filter profile to be used, or None to disable Web Content Filter for the Default Rule. Select [Create New] from the dropdown list to create a new profile.
	DNS Filter - Select the DNS Filter profile to be used, or None to disable DNS Filter for the Default Rule. Select [Create New] from the dropdown list to create a new profile.
Block Immediately	Packets matching the rule will be dropped immediately.

4. After choosing the mechanism, click Next to get the summary page for reference.

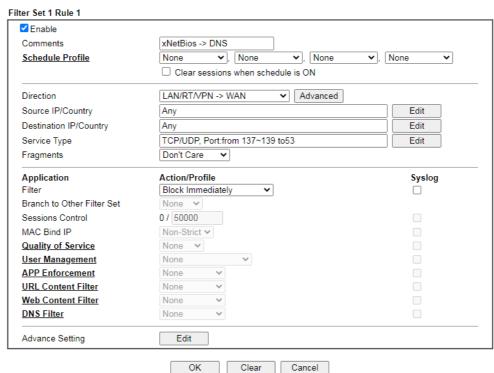

5. If there is no error, click Finish to complete wizard setting.

To use Advance Mode, do the following steps:

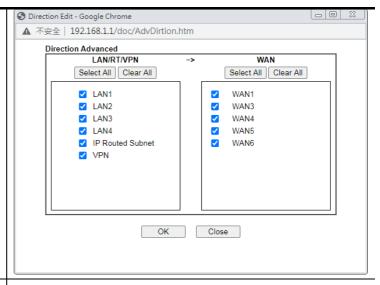

- 1. Click the Advance Mode radio button.
- 2. Click Index 1 to access into the following page.

Firewall >> Edit Filter Set >> Edit Filter Rule

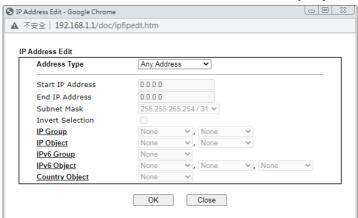

Filter Set 1 Rule 1

Item	Description
Enable	Check this box to enable the filter rule.
Comments	Enter filter set comments/description. Maximum length is 14- character long.
Schedule Profile	Select Schedule indexes to allow the rule to be enabled at specific times. You may choose up to 4 out of the 15 schedules in Applications >> Schedule. The rule is always enabled when no indexes have been selected.
Clear sessions when schedule ON	Select this option to clear existing sessions when the rule is changes is enabled by a schedule profile. All connections will be reset.
Direction	Specify the direction of traffic flow to which this filter rule applies.
	Note: RT stands for the routing domain for 2nd subnet or other LAN.
	Advanced - After choosing the direction, click the Advanced button to specify interfaces for traffic flow.

Source IP/ Country and Destination IP / Country Click Edit to bring up the following dialog box to configure the source and destination IP addresses or country objects.

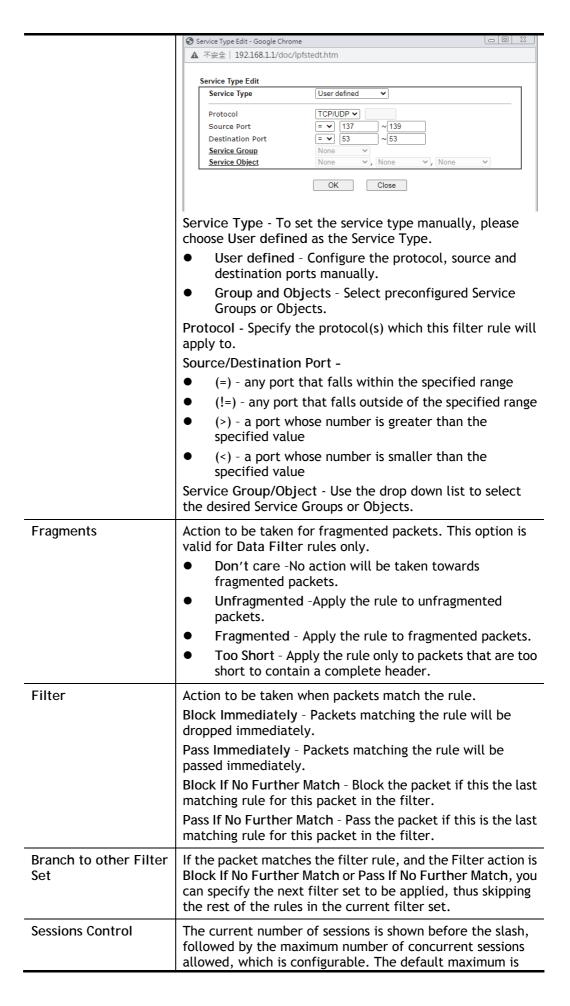

To set the IP address manually, please choose an Address Type and enter required information.

Address Type - Select from one of the following:

- Any Address All IP addresses
- Single Address Enter one IP address in Start IP address
- Range Address Enter the Start and End IP Addresses
- Subnet Address Enter the Start IP Address and the Subnet Mask. Example: Start IP Address 192.168.1.1 and Subnet Mask 255.255.255.128 means is the same as having the Start IP Address as 192.168.1.1 and the End IP Address as 192.168.1.127.
- Group and Objects Allows selection of predefined IP Groups and IP Objects. For details on IP Groups and Objects, see the chapter on Objects Setting.
- Country Object Allows selection of predefined country objects.

Service Type

Click Edit to bring up the following dialog box to configure the Service Type.

	60000, which is also the upper limit of the value.
	· · · · · · · · · · · · · · · · · · ·
MAC Bind IP	Strict - Ensure that both the MAC address and the IP address of the source and/or destination clients.
	Non-Strict - Do not check the IP address when processing IP Objects that specify MAC addresses.
Quality of Service	Choose one of the QoS rules to be applied as firewall rule. For detailed information of setting QoS, please refer to the related section later.
User Management	This setting is only available when Rule-Based is selected in User Management>>General Setup. The default firewall rule will be applied to the selected user or user group. Refer to the chapter on User Management for more details on the feature.
	None: User Management does not apply to the default rule.
	 User Object: The default rule only applies to the selected user.
	 [Create New User]: Select this to create a new user. User Group: The default rule only applies to the selected User Group.
	• [Create New Group]: Select this to create a new user group.
	ALL: The default rule applies to all defined users.
	 Create New User or Create New Group item will appear for you to click to create a new one if there is no user profile or group profile existed.
	Syslog - Select to allow User Management to log messages in Syslog.
APP Enforcement	Select an APP Enforcement profile for application blocking, or None to disable APP Enforcement for the Default Rule. Select [Create New] from the dropdown list to create a new profile. Refer to the chapter on APP Enforcement for more details on the feature.
	Syslog - Select to allow APP Enforcement to log messages in Syslog.
URL Content Filter	Select a URL Content Filter profile to be used, or None to disable URL Content Filter for the Default Rule. Select [Create New] from the dropdown list to create a new profile. Refer to the chapter on URL Content Filter for more details on the feature.
	Syslog - Select to allow URL Content Filter to log messages in Syslog. Logging action is configured at the profile level in CSM>>URL Content Filter Profile, Log.
Web Content Filter	Select a Web Content Filter profile to be used, or None to disable Web Content Filter for the Default Rule. Select [Create New] from the dropdown list to create a new profile.
	Syslog - Select to allow Web Content Filter to log messages in Syslog. Logging action is configured at the profile level in the Web Content Filter Profile Table section in CSM>>Web Content Filter Profile, Log.
DNS Filter	Select the DNS Filter profile to be used, or None to disable DNS Filter for the Default Rule. Select [Create New] from

the dropdown list to create a new profile.

Syslog - Select to allow DNS Filter to log messages in Syslog. Logging action is configured at the profile level in the DNS Filter Profile Table section in CSM>>DNS Filter Profile, SysLog.

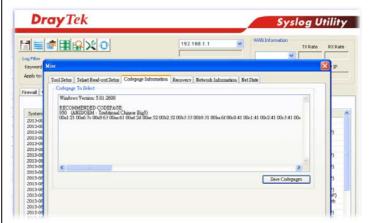

Advance Setting

Click Edit to open the configuration window for Advanced Settings. However, it is recommended to use the default settings.

Codepage - Sets the codepage used by the URL content filter to match URLs against keywords in profiles. Choosing the appropriate codepage can increase the accuracy of the URL Content Filter. The default value is ANSI 1252 Latin I. If the setting is None, no decoding of URL will be performed.

If you are unsure of which codepage to use, please start the Syslog application, and the recommended codepage will be shown in the Codepage Information tab in the Setup dialog box.

Window size - Sets the TCP window size as described in RFC 1323. Valid values are from 0 to 65535. The more the value is, the better the performance will be. However, if the network is not stable, small value will be proper.

Session timeout - Sets the timeout sessions are allowed to idle before they are removed from the system.

DrayTek Banner - Select to display the following screen for web pages that are blocked by the Firewall. The default setting is Enabled.

The requested Web page has been blocked by Web Content Filter.

Please contact your system administrator for further information.

[Powered by Draytek]

Strict Security Checking

APP Enforcement - If this option is selected, when the router cannot identify the application that generated the outbound traffic due to limited system resources, the session will be blocked; if this option is not selected, the session will be allowed.

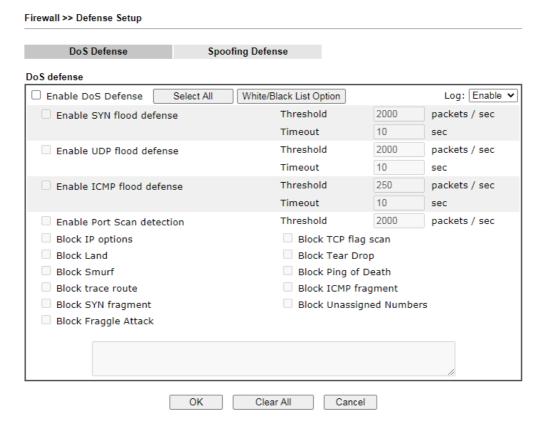

3. When you finish the configuration, please click OK to save and exit this page.

VI-1-3 Defense Setup

As a sub-functionality of IP Filter/Firewall, there are 15 types of detect/ defense function in the DoS Defense setup. The DoS Defense functionality is disabled for default.

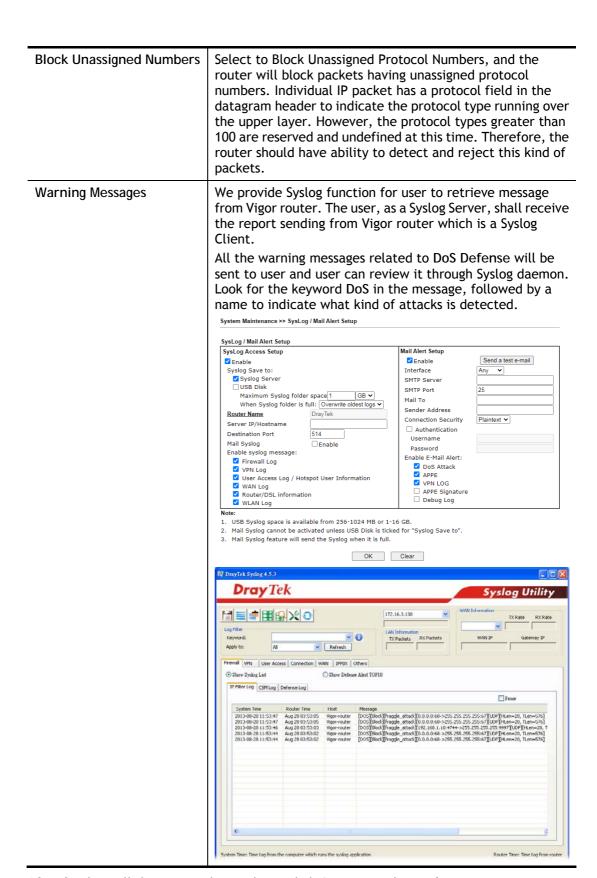

VI-1-3-1 DoS Defense

To configure DoS Defense, select DoS Defense under the Firewall menu item on the Web UI menu bar.

Item	Description
Enable Dos Defense	Select to enable DoS Defense. Select AII - Click to select all DoS Defense options. White/Black List Option - Set white/black list of IPv4/IPv6 address.
Enable SYN flood defense	Select to enable SYN flood defense. When the arrival rate of SYN packets exceeds the Threshold value, the router will start to randomly discard TCP SYN packets for a period of time as defined in Timeout. This is to prevent TCP SYN packets from exhausting router resources. The default values of threshold and timeout are 2000 packets per second and 10 seconds, respectively.
Enable UDP flood defense	Select to enable UDP flood defense. When the arrival rate of UDP packets exceeds the Threshold value, the router will start to randomly discard TCP SYN packets for a period of time as defined in Timeout. The default values of threshold and timeout are 2000

	packets per second and 10 seconds, respectively.
Enable ICMP flood defense	Select to enable ICMP flood defense. When the arrival rate of ICMP packets exceeds the Threshold value, the router will start to randomly discard TCP SYN packets for a period of time as defined in Timeout. The default values of threshold and timeout are 250 packets per second and 10 seconds, respectively.
Enable Port Scan detection	Select to enable Port Scan detection. Port Scans attack your network by sending packets to a range of ports in an attempt to find services that would respond. When Port Scan detection is enabled, the router sends warning messages when it detects port scanning activities that exceed the Threshold rate. The default threshold is 2000 packets per second.
Block IP options	Select to enable Block IP options. The Vigor router will ignore IP packets with IP option field set in the datagram header. IP options are rarely used and could be abused by attackers as they carry information about the private network otherwise not available to the external network, such as security, TCC (closed user group) parameters, a series of Internet addresses, routing messages, etc, which external eavesdroppers can use to discover details about the private network.
Block Land	Select to Block LAND attacks. LAND attacks happen when an attacker sends spoofed SYN packets with both source and destination addresses set to that of the target system, which causes the target to reply to itself continuously.
Block Smurf	Select to Block Smurf attacks. The router will ignore any broadcasting ICMP echo request.
Block trace route	Select to Block traceroutes. The router will not forward traceroute packets.
Block SYN fragment	Select to Block SYN packet fragments. The router will drop any packets having both the SYN and more-fragments bits set.
Block Fraggle Attack	Select to Block Fraggle Attacks. Broadcast UDP packets received from the Internet are blocked.
	Activating this feature might block some legitimate packets. Since all broadcast UDP packets coming from the Internet are blocked, RIP packets from the Internet could also be dropped.
Block TCP flag scan	Select to Block TCP Flag Scans. TCP packets with abnormal flag settings will be dropped. TCP flag scanning activities that are blocked include no flag scan, FIN without ACK scan, SYN FIN scan, Xmas scan and full Xmas scan.
Block Tear Drop	Select to Block Tear Drop attacks. Some clients may crash when they receive ICMP datagrams (packets) that exceed the maximum length. The router discards any fragmented ICMP packets having lengths greater than 1024 octets.
Block Ping of Death	Select to Block Ping of Death, where fragmented ping packets are sent to target hosts so that those hosts could crash as they reassemble the malformed ping packets.
Block ICMP Fragment	Select to Block ICMP Fragments. ICMP packets with the more-fragments bit set are dropped.

After finishing all the settings here, please click OK to save the configuration.

VI-1-3-2 Spoofing Defense

Click the Spoofing Defense tab to open the setup page.

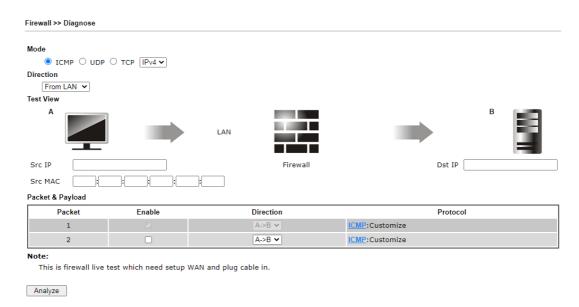

VI-1-4 Diagnose

The purpose of this function is to test when the router receiving incoming packet, which firewall rule will be applied to that packet. The test result, including firewall rule profile, IP address translation in packet transmission, state of the firewall fuctions and etc., also will be shown on this page.

Info

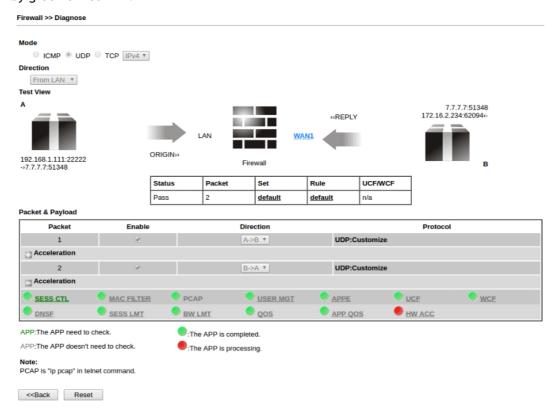

The result obtained by using Diagnose is offered for RD debug. It will be different according to actual state such as netework connection, LAN/WAN settings and so on.

Item	Description
Mode	To have a firewall rule test, specify the service type (ICMP, UDP, TCP) of the packet and type of the IP address (IPv4/IPv6).
Direction	Set the way (from WAN or from LAN) that Vigor router receives the first packet for test. Different way means the firewall will process the connection initiated from LAN or from WAN.
Test View	This is a dynamic display page. According to the direction specified, test view will display the figure to guide you typing IP address, port number, and MAC address. Later, after clicking the Analyze button, the information for the firewall rule profile and address translation will be shown on this page.
Src IP	Enter the IPv4/IPv6 address of the packet's source.
Src Port	Enter the port number of the packet's source.
Src MAC	Enter the MAC address of the packet's source.
Dst IP	Enter the IPv4/IPv6 address of the packet's destination.

Dst Port	Enter the port number of the packet's destination.
Packet & Payload	In firewall diagnose, two packets belong to one connection. In general, two packets are enough for Vigor router to perform this test.
	Enable - Check the box to send out the test packet.
	Direction - The first packet of the firewall test will follow the direction specified above. However, the direction for the second packet might be different. Simply choose the direction (from Computer A to B or from the B to A) for the second packet.
	Protocol - It displays the mode selected above and the state. If required, click the mode link to configure advanced setting. The common service type (Customize, Ping, Trace Route / Customize, DNS, Trace Route / Customize, Http(GET) related to that mode (ICMP / UDP / TCP) will be shown on the following dialog box.
	S ICMP Protocol Setting - Google Chrome □ □ 🎛
	▲ 不安全 192.168.1.1/doc/fwdiagicmp.htm
	Type
	Payload
	ОК
	 Type - Choose Customize, Ping, Trace Route / Customize, DNS, Trace Route / Customize, Http (GET).
	 Payload - It is available when Customize is selected. Simply type 16 HEX characters which represent certain packet (e.g., DNS packet) if you want to set the data transfered with protocol (ICMP/UDP/TCP) which is different to Type setting.
Analyze	Execute the test and analyze the result.

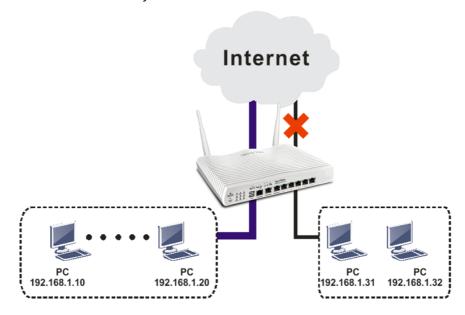

The following figure shows the test result after clicking Analyze. Processing state for the fuctions (MAC Filter, QoS, User management, etc.,) related to the firewall will be displayed by green or red LED.

Application Notes

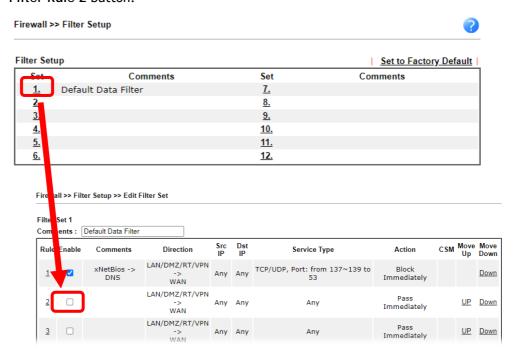

A-1 How to Configure Certain Computers Accessing to Internet

We can specify certain computers (e.g., 192.168.1.10 ~ 192.168.1.20) accessing to Internet through Vigor router. Others (e.g., 192.168.1.31 and 192.168.1.32) outside the range can get the source from LAN only.

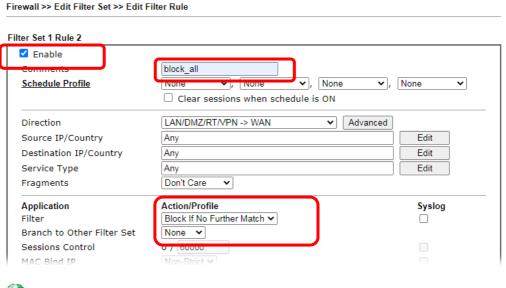

The way we can use is to set two rules under Firewall. For Rule 1 of Set 2 under Firewall>>Filter Setup is used as the default setting, we have to create a new rule starting from Filter Rule 2 of Set 2.

- 1. Access into the web user interface of Vigor router.
- 2. Open Firewall>>Filter Setup. Click the Set 2 link, choose Advance Mode and choose the Filter Rule 2 button.

3. Check the box of Enable. Enter the comments (e.g., block_all). Choose Block If No Further Match for the Filter setting. Then, click OK.

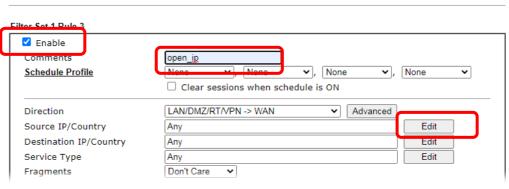

Info

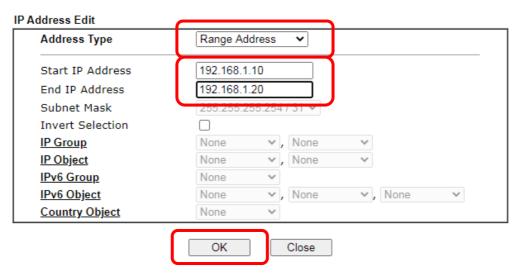

In default, the router will check the packets starting with Set 2, Filter Rule 2 to Filter Rule 7. If Block If No Further Match for is selected for Filter, the firewall of the router would check the packets with the rules starting from Rule 3 to Rule 7. The packets not matching with the rules will be processed according to Rule 2.

- 4. Next, set another rule. Just open Firewall>>Filter Setup. Click the Set 2 link and choose the Filter Rule 3 button.
- 5. Check the box of Check to enable the Filter Rule. Enter the comments (e.g., open_ip). Click the Edit button for Source IP.

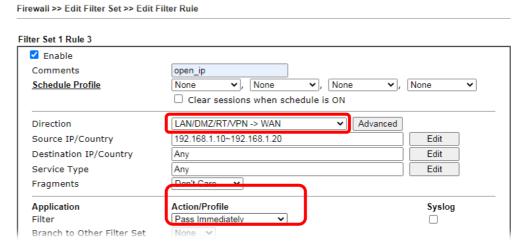

Firewall >> Edit Filter Set >> Edit Filter Rule

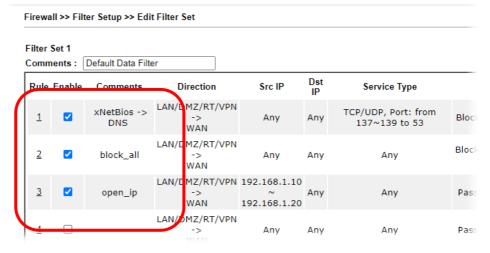

6. A dialog box will be popped up. Choose Range Address as Address Type by using the drop down list. Type 192.168.1.10 in the field of Start IP, and type 192.168.1.20 in the field of End IP. Then, click OK to save the settings. The computers within the range can access into the Internet.

7. Now, check the content of Source IP is correct or not. The action for Filter shall be set with Pass Immediately. Then, click OK to save the settings.

8. Both filter rules have been created. Click OK.

Now, all the settings are configured well. Only the computers with the IP addresses within $192.168.1.10 \sim 192.168.1.20$ can access to Internet.

VI-2 Central Security Management (CSM)

Content Security Management (CSM) allows the network administrator to restrict Internet traffic based on the content type, thus ensuring appropriate use of network resources and also reducing the likelihood of threats from malicious network content.

APP Enforcement Filter

The APP Enforcement Filter can be used to prevent users from using undesirable or inappropriate network applications such as online chat and peer-to-peer programs. The filter works by detecting and blocking network traffic of applications by means of traffic patterns.

URL Content Filter

The URL Content Filter scans URL strings in HTTP requests for predefined keywords to restrict browsing activities.

Web Content Filter

Users can also be prevented from browsing certain types of websites by using the Web Content Filter. This filter classifies website domain names into different categories, which can be selectively blocked.

Filter profiles must first be created before these CSM Filters can be enabled. Once profiles have been configured, they can be applied to the Default Rule under Firewall>>General Setup, or Filter Rules in Filter Sets under Firewall>>Filter Setup.

Info

The priority of URL Content Filter is higher than Web Content Filter.

Web User Interface

CSM

<u>15.</u>		<u>31.</u>	
<u>16.</u>		<u>32.</u>	

Item	Description
Set to Factory Default	Clear all profile settings.
Profile	Index of the profile. Click to bring up the configuration page of the profile.
Name	Name of the profile.

To configure a profile, click on its profile number, and the following profile configuration page will appear:

CSM >> APP Enforce	ement Profile		
Profile Index : 1 Profile Name:		Clone Profile	
Category	Application		
Instant Message	☐ AIM Login ☐ BaiduHi	☐ AliWW ☐ Facebook/Instagram	☐ Ares ☐ Fetion
Select All	☐ GaduGadu Protocol ☐ KC	□ICQ □LINE	□iSpQ □LinkedIn
Clear All	□ Paltalk □ Signal □ Telegram □ WebIM URLs	☐ PocoCall ☐ Slack ☐ Tencent QQ ☐ WhatsApp	☐ Qnext ☐ Snapchat ☐ UC ☐ WhatsApp Call
VoIP Select All	□ RC Voice	□ Skype/Teams	☐ TeamSpeak
Clear All	□TelTel	□WeChat	
P2P Select All	☐ Ares ☐ eDonkey ☐ Huntmine	☐ BitTorrent ☐ FastTrack ☐ Kuwo	☐ ClubBox ☐ Gnutella ☐ CnepET

Available settings are explained as follows:

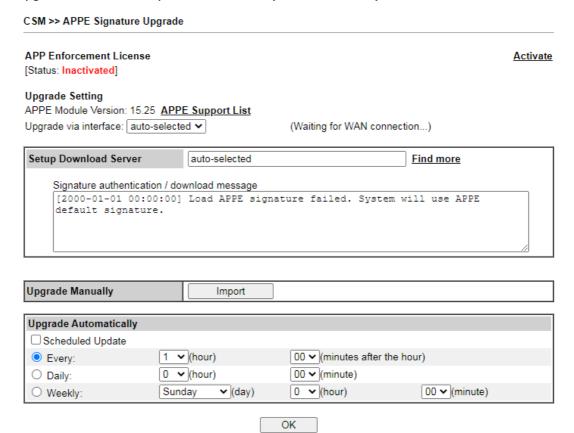

Item	Description
Profile Name	Name that identifies this profile. Maximum length is 15 characters.
Clone Profile	Click it to clone settings configured by an existed profile.
Category	Apps are classified into several categories. Each category contains several apps to be blocked.
Select All	Click to select all of the items on this page.
Clear All	Click to deselect all selected items.
	Select this checkbox to block the app.

To save changes on the page, click OK. To discard changes, click Cancel.

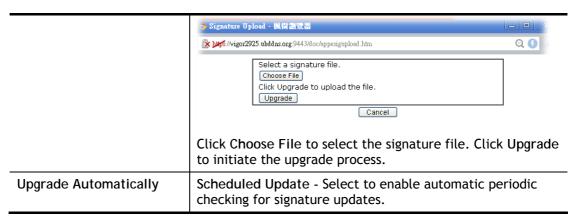

VI-2-2 APPE Signature Upgrade

The APP Enforcement Profile feature identifies applications by matching their network traffic to signatures. DrayTek periodically releases APPE signature upgrades to ensure that new applications or new versions can be detected.

Upgrade checks can be performed manually or automatically.

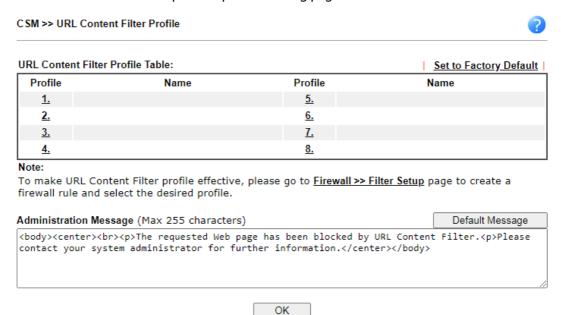

Item	Description
APP Enforcement License	Status - Display current license status.
Upgrade Setting	APPE Module Version - Shows the current version of the APPE signature.
	Upgrade via interface - Select a WAN interface to download the new APPE signature.
Setup Download Server	Specify a download server by typing its URL of the server. Click the <u>Find more</u> for a list of download servers. When the default value auto-selected is used, the server is determined automatically by looking up the geolocation of the WAN IP address.
	Signature authentication/download message -Displays download status messages.
Upgrade Manually	Use this functionality if you wish to upgrade using a previously-downloaded signature file. Import - Clicking the button brings up the following page.

Click OK to save changes on the page.

VI-2-3 URL Content Filter Profile

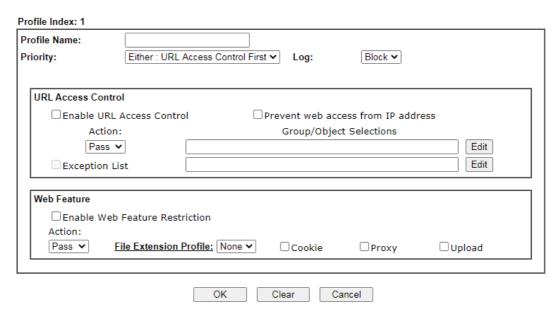

To set up URL Content Filter Profiles, click CSM on the Main Menu bar, and then click URL Content Filter Profile to open the profile setting page.

Each item is explained as follows:

Item	Description
Set to Factory Default	Clear all profile settings.
Profile	Index number of the profile.
Name	Name that identifies the profile.
Administration Message	The message to be displayed in the browser when access to a URL has been blocked. A custom message can be entered with HTML formatting in the text box. Default Message - Click to reset the administration message to the factory default.

To set up a profile, click the profile number under Index column to bring up the configuration page.

Item	Description
Profile Name	Name that identifies the URL Content Filter profile. The maximum length of the Profile Name is 15 characters.
Priority	The order of evaluation of URL Access Control and Web Feature below:
	Both: Pass - Router will allow access only to web resources that match conditions specified in both URL Access Control and Web Feature. The Action setting of both URL Access Control and Web Feature will be disabled and the values set to Pass.
	Both:Block - Router will block access to web resources that match conditions specified in both URL Access Control and Web Feature. The Action setting of both URL Access Control and Web Feature will be disabled and the values set to Block.
	Either: URL Access Control First - Router will block or allow access to web resources that match conditions specified in either URL Access Control or Web Feature. URL Access Control is applied first, followed by Web Feature.
	Either: Web Feature First - Router will block or allow access to web resources that match conditions specified in either URL Access Control or Web Feature. Web Feature is applied first, followed by URL Access Control.
Log	None - No log file will be created for this profile.
	Pass - Only passed access attempts will be recorded in Syslog.
	Block - Only blocked access attempts will be recorded in Syslog.
	AII - Both passed and blocked access attempts will be recorded in Syslog.
URL Access Control	Enable URL Access Control - Select to activate URL Access Control.
	Prevent web access from IP address - URLs containing IP addresses (e.g., 192.168.1.1) will be blocked. Only URLs with

domain addresses (e.g., www.draytek.com) will be allowed. This is to prevent users from circumventing URL Access Control.

Action - This setting is enabled only when Priority is set to Either: URL Access Control First or Either: Web Feature First.

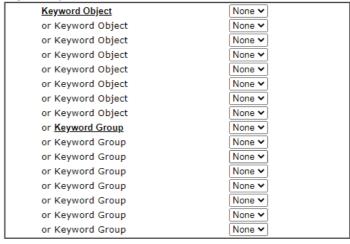

- Pass Allows access to web pages with URLs containing keywords that are in the selected keyword groups or objects. Access to other URLs is blocked.
- Block Blocks access to web pages with URLs containing keywords that are in the selected keyword groups or objects. Access to other URLs is allowed.

Exception List - Specify the object profile(s) as the exception list which will be processed in an opposite manner to the action selected above.

Group/Object Selections - Shows the Keyword Groups and/or Objects selected for this URL Content Filter Profile.

To add or remove Keyword Groups and Objects to the selection, click the Edit button to bring up the following screen.

Object/Group Edit

Up to 8 Keyword Objects and 8 Keyword Groups can be selected. To add, remove or modify Groups or Objects, click the Keyword Object or Keyword Group hyperlinks to bring up the Objects Setting >> Keyword Group pages.

Close

OK

Web Feature

Enable Restrict Web Feature - Check to enable the web feature restriction.

Action - This setting is enabled only when Priority is set to Either: URL Access Control First or Either: Web Feature First.

- Pass Allows access to web pages with URLs containing keywords that are in the selected keyword groups or objects. Access to other URLs is blocked.
- Block Blocks access to web pages with URLs containing keywords that are in the selected keyword groups or objects. Access to other URLs is allowed.

File Extension Profile - Choose one of the profiles that you configured in Object Setting>> File Extension Objects

previously for passing or blocking the file downloading.
Cookie - Select to block cookies from Internet websites.
Proxy - Select to block web proxy servers that relay HTTP traffic.
Upload - Select to block HTTP uploads from the LAN to the Internet.

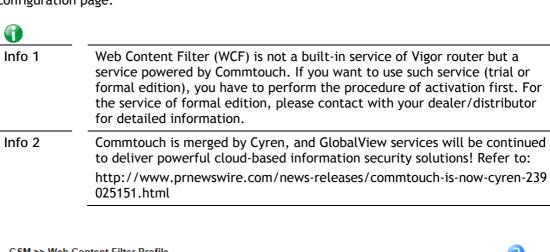

To save changes on the page, click OK . To discard changes, click Cancel . To clear all settings, click Clear .

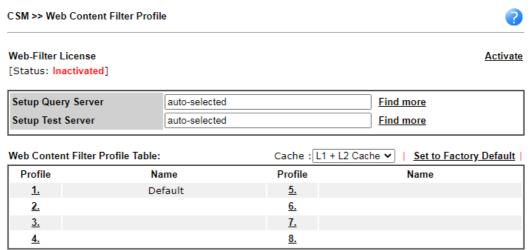

VI-2-4 Web Content Filter Profile

Trial WCF service can be activated using the Service Activation Wizard.

If you wish to continue using WCF beyond the trial period, you can obtain a full WCF subscription by contacting your local DrayTek channel partner or dealer. WCF subscriptions can be activated using the Activate link on CSM >> Web Content Filter Profile (described in this section) or System Maintenance.

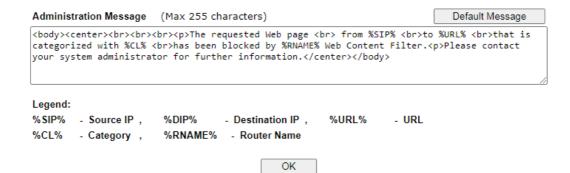

From the main menu, click CSM, followed by Web Content Filter Profile to load the profile configuration page.

Note:

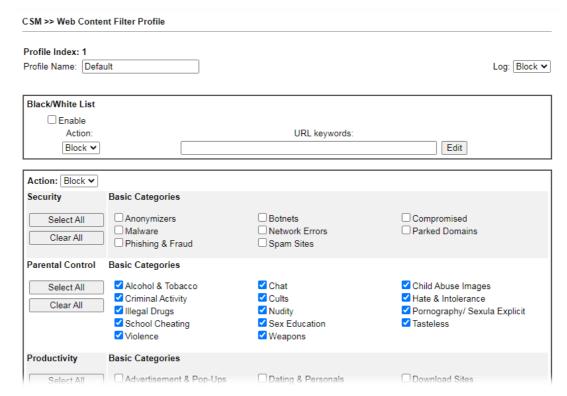

To make Web Content Filter profile effective, please go to <u>Firewall >> Filter Setup</u> page to create a firewall rule and select the desired profile.

Item	Description
Activate	Click to visit the MyVigor webnsite to activate WCF service. You will need to log in to your MyVigor account to proceed with the activation process. If you do not already have a MyVigor account, you can create one at this time.
Setup Query Server	Specify a WCF query server by typing address of the server. Click the <u>Find more</u> for a list of query servers. When the default value auto-selected is used, the server is determined automatically by looking up the geolocation of the WAN IP address. It is recommended that the default setting auto-selected be used.
Setup Test Server	Specify a WCF test server by typing address of the server. Click the Find more for a list of test servers. When the default value auto-selected is used, the server is determined automatically by looking up the geolocation of the WAN IP address. It is recommended that the default setting auto-selected be
	used.
Cache	None - The router verifies every HTTP URL requested by communicating with the WCF server on the Internet. This mode provides the most precise URL matching but has the lowest performance.
	L1 - The router caches the HTTP URLs that have been checked against the WCF server. URLs will be looked up in the L1 cache before reaching out to the WCF server. When the cache is full, the oldest entry will be deleted to accommodate new URLs.
	L2 - After a URL has been checked and found to pass WCF, the source and destination IPs are cached for about 1 second in the L2 cache. This is to allow a webpage to be loaded without further verifying the same URLs against the L1 cache or the WCF server.
	L1+L2 Cache - The router will utilize both L1 and L2 caches.
Set to Factory Default	Clear all profile settings.
Profile	Index number of the profile.
Name	Name that identifies the profile.
Administration Message	The message to be displayed in the browser when access to a website has been blocked. A custom message can be entered with HTML formatting in the text box.
	You can embed the following variables in the message: %SIP% - The source IP address that attempted the HTTP access.
	%DIP% - The destination IP address to which access was attempted.
	%URL% - The URL of the destination website.
	%CL% - The category to which the URL belongs. %RNAME% - The name of the router.
	Default Message - Click to reset the administration message to the factory default.

Up to 8 WCF profiles can be set up. To configure a profile, click its profile number to bring up its configuration page. Filter profile settings are specific to WCF providers. If you already

have an active WCF subscription, activating a WCF subscription to a provider that is different from your current provider will clear all existing profile configuration.

Item	Description
Profile Name	Name that identifies the WCF profile. The maximum length of the Profile Name is 15 characters.
Log	None - No log file will be created for this profile.
	Pass - Only passed access attempts will be recorded in Syslog.
	Block - Only blocked access attempts will be recorded in Syslog.
	AII - Both passed and blocked access attempts will be recorded in Syslog.
Black/White List	Keyword objects and groups can be applied to the URL to override WCF category filtering.
	Enable - Select to enable blacklisting or whitelisting.
	Action - Action to take when a URL matches keyword group and object selections.
	Pass - Allow access to the URL.
	Block - Disallow access to the URL.
	URL Keywords - Displays selected keyword group and objects. Click the Edit button to modify keyword selections.
Groups and Categories	Select categories to be included in the filter.
	Action - Action to take when a URL matches keyword group and object selections.
	Pass - allow access to the URL.
	Block - disallow access to the URL.
	Select AII - Click to select all categories within the group.

Clear AII - Click to deselect all categories within the group.

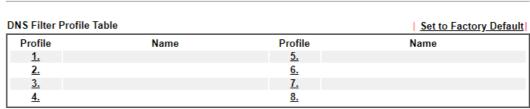

To save changes on the page, click OK. To discard changes, click Cancel.

VI-2-5 DNS Filter Profile

DNS Filter blocks or allows traffic to the WAN by intercepting DNS queries, and applying UCF and WCF rules to hostnames. DNS filtering is especially useful when you wish to restrict access of protocols other than HTTP, such as HTTPS. Note that a WCF license must have already been activated before WCF rules could be used.

To configure DNS Filter Profiles, select CSM >> Web Content Filter Profile from the main menu.

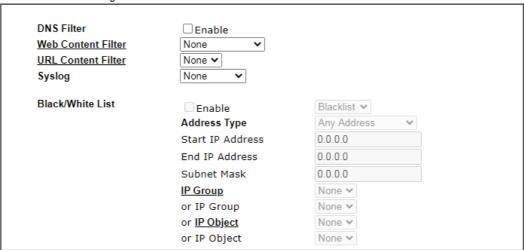

CSM >> DNS Filter

Note:

To make DNS Filter profile effective, please go to <u>Firewall >> Filter Setup</u> page to create a firewall rule and select the desired profile.

DNS Filter Local Setting

Adminis	tration Message	(Max 255 ch	aracters)	Default Message
categor	ized with %CL%	has been		om %SIP% to %URL% that is ilter.Please contact your y>
Legend: %SIP% %CL%	- Source IP ,	%URL% %RNAMF%	- URL - Router Name	

Item	Description
DNS Filter Profile Table	DNS Filter Profiles take effect when DNS servers on the WAN are used for DNS queries. The router intercepts all outgoing DNS queries on UDP port 53 and applies WCF and UCF rules on the domain names before passing the queries to the DNS servers. IP addresses of the domains are then blocked or allowed as per applicable WCF and UCF rules.
	DNS Filter Profiles can be applied by selecting from Firewall filter rules.
	Profile - Index number of the profile. Click to bring up the configuration page for the profile entry.
	Name - Name that identifies the profile.
Set to Factory Default	Clear all DNS Filter profile settings.
DNS Filter Local Setting	By setting the IP address of the DNS lookup server to the router's address, the router serves as a DNS lookup proxy server. When DNS Filter Local Setting is enabled, all DNS queries sent to the router will have WCF and UCF rules applied to the hostnames, and access to the resolved IP addresses will be allowed or blocked as configured in the rules. DNS Filter - Select to enable DNS Filter Local Setting. Web Content Filter - Select a WCF profile. URL Content Filter - Select a UCF profile. Syslog - The filtering result can be recorded according to the setting selected for Syslog. None - No log file will be created for this profile. Pass - Only passed access attempts will be recorded in Syslog. Block - Only blocked access attempts will be recorded in Syslog. Both - Both passed and blocked access attempts will be recorded in Syslog. Black/White List - Specify IP address, subnet mask, IP
	object, or IP group as a black list or white list for DNS packets passing through or blocked by Vigor router.
Administration Message	The message to be displayed in the browser when access to a website has been blocked. A custom message can be entered with HTML formatting in the text box.
	You can embed the following variables in the message:
	%SIP% - The source IP address that attempted the HTTP access
	access.%DIP% - The destination IP address to which access was attempted.
	• %URL% - The URL of the destination website.
	%CL% - The category to which the URL belongs.
	• %RNAME% - The name of the router.
	Default Message - Click to reset the administration message to the factory default.

To save changes on the page, click OK. To discard changes, click Cancel.

Application Notes

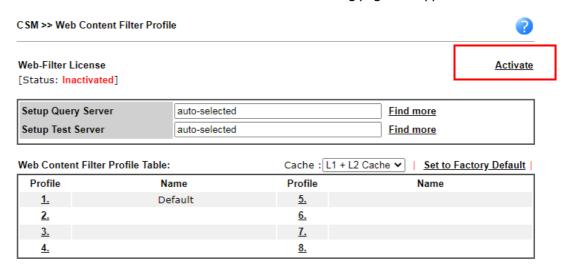

A-1 How to Create an Account for MyVigor

The website of MyVigor (a server located on http://myvigor.draytek.com) provides several useful services (such as Anti-Spam, Web Content Filter, Anti-Intrusion, and etc.) to filtering the web pages for the sake of protecting your system.

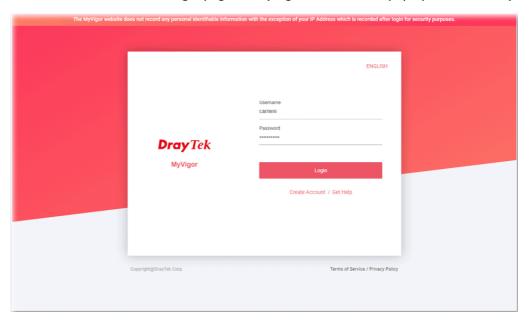

To access into MyVigor for getting more information, please create an account for MyVigor.

Create an Account via Vigor Router

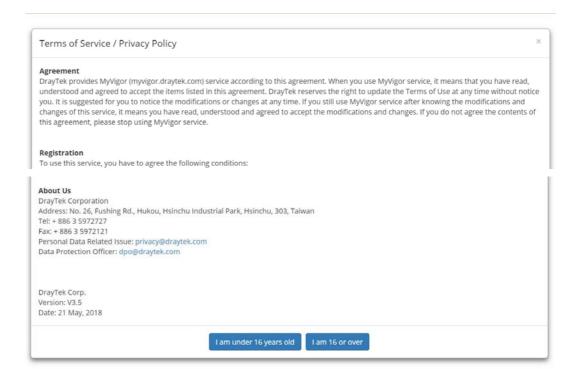

1. Click CSM>> Web Content Filter Profile. The following page will appear.

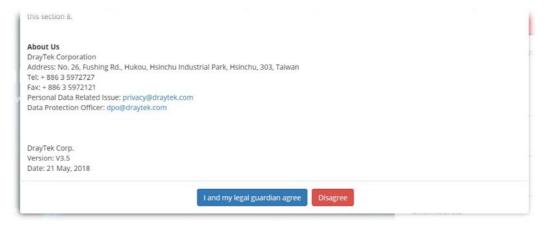

2. Click the Activate link. A login page for MyVigor web site will pop up automatically.

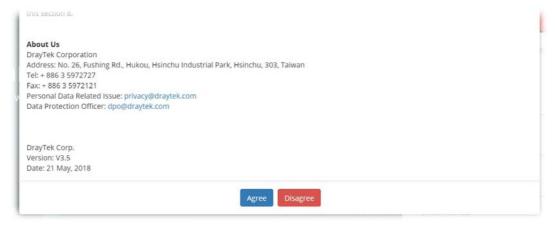

- 3. Click the link of Create Acount.
- 4. The system will ask if you are 16 years old or over.
 - If yes, click I am 16 or over.

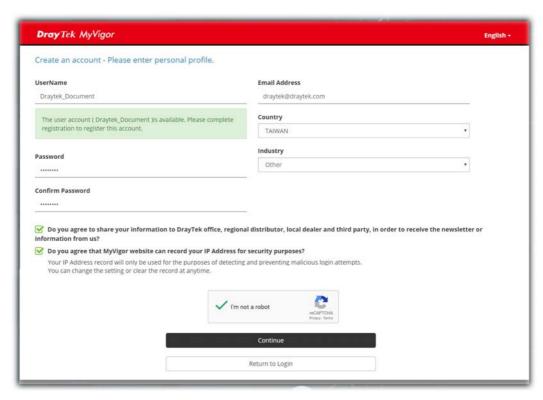

■ If not, click I am under 16 years old to get the following page. Then, click I and my legal guardian agree.

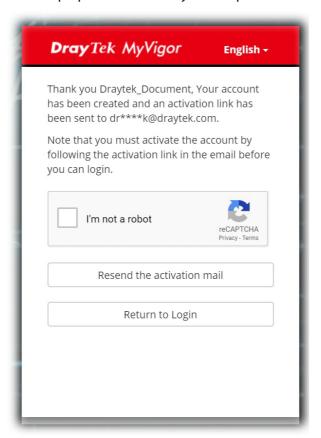

5. After reading the terms of service/privacy policy, click Agree.

6. In the following page, enter your personal information in this page and then click Continue.

7. Choose proper selection for your computer and click Continue.

- 8. Now you have created an account successfully.
- 9. Check to see the confirmation *email* with the title of New Account Confirmation Letter from myvigor.draytek.com.

***** This is an automated message from myvigor draytek.com. *****

Thank you (Mary) for creating an account.

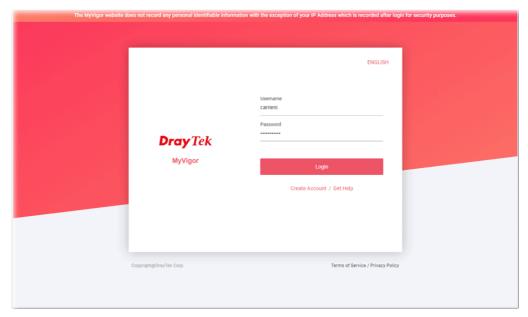

Please click on the activation link below to activate your account

Link: Activate my Account

10. Click the Activate my Account link to enable the account that you created. The following screen will be shown to verify the register process is finished. Please click Login.

Register	Search for this site GO
Register Confirm	
	Thank for your register in VigorPro Web Site The Register process is completed
	Close Login

11. When you see the following page, please Enter the account and password (that you just created) in the fields of Username and Password.

12. Now, click Login. Your account has been activated. You can access into MyVigor server to activate the service (e.g., WCF) that you want.

A-2 How to Block Facebook Service Accessed by the Users via Web Content Filter / URL Content Filter

There are two ways to block the facebook service, Web Content Filter and URL Content Filter.

Web Content Filter,

Benefits: Easily and quickly implement the category/website that you want to block.

Note: License is required.

URL Content Filter,

Benefits: Free, flexible for customize webpage.

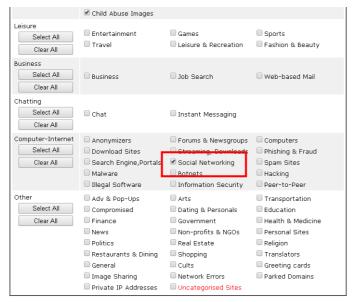

Note: Manual setting (e.g., one keyword for one website.)

I. Via Web Content Filter

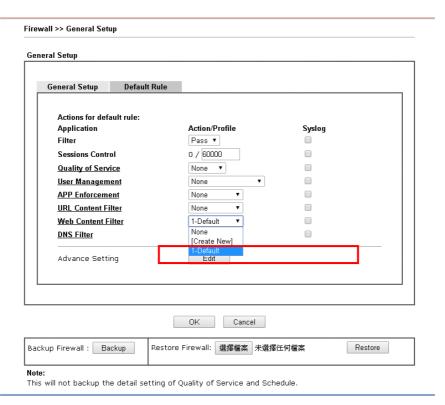

1. Make sure the Web Content Filter license is valid.

2. Open CSM >> Web Content Filter Profile to create a WCF profile. Check Social Networking with Action, Block.

3. Enable this profile in Firewall>>General Setup>>Default Rule.

4. Next time when someone accesses facebook via this router, the web page would be blocked and the following message would be displayed instead.

The requested Web page
from 192.168.2.114
to www.facebook.com/
that is categorized with [Social Networking]
has been blocked by Web Content Filter.

Please contact your system administrator for further information.

[Powered by DrayTek]

II. Via URL Content Filter

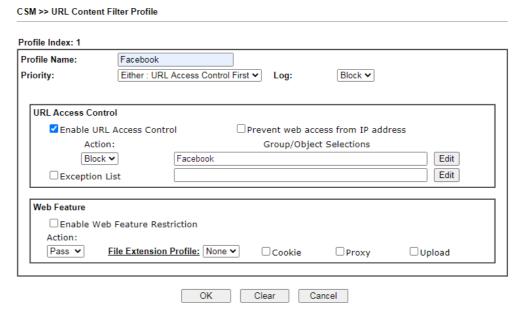

A. Block the web page containing the word of "Facebook"

- Open Object Settings>>Keyword Object. Click an index number to open the setting page.
- 2. In the field of Contents, please type *facebook*. Configure the settings as the following figure.

Objects Setting >> Keyword Object Setup

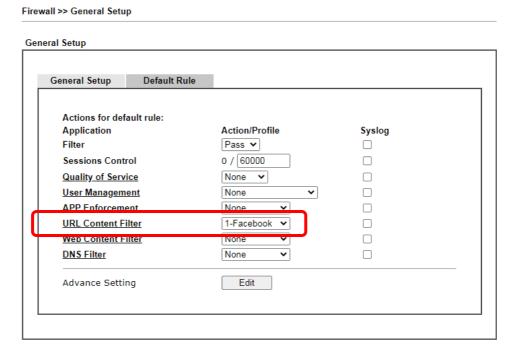

- 3. Open CSM>>URL Content Filter Profile. Click an index number to open the setting page.
- 4. Configure the settings as the following figure.

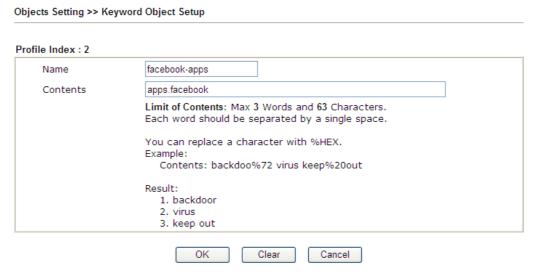

5. When you finished the above steps, click OK. Then, open Firewall>>General Setup.

6. Click the Default Rule tab. Choose the profile just configured from the drop down list in the field of URL Content Filter. Now, users cannot open any web page with the word "facebook" inside.

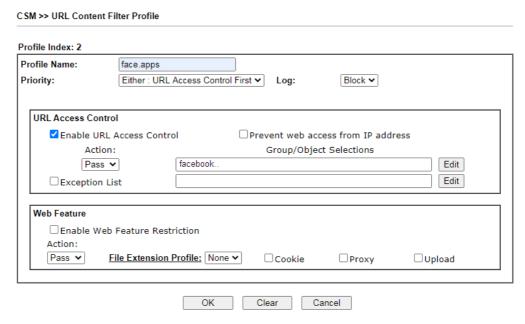

B. Disallow users to play games on Facebook

- 1. Open Object Settings>>Keyword Object. Click an index number to open the setting page.
- 2. In the field of Contents, please type *apps.facebook*. Configure the settings as the following figure.

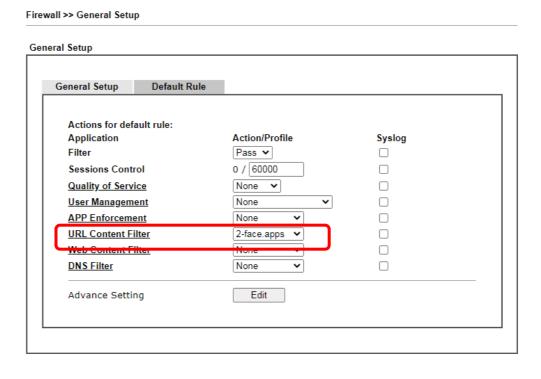

3. Open CSM>>URL Content Filter Profile. Click an index number to open the setting page.

4. Configure the settings as the following figure.

- 5. When you finished the above steps, please open Firewall>>General Setup.
- 6. Click the Default Rule tab. Choose the profile just configured from the drop down list in the field of URL Content Filter. Now, users cannot open any web page with the word "facebook" inside.

Part VII Management

System Maintenance

Bandwidth Management

User Management

There are several items offered for the Vigor router system setup: System Status, TR-069, Administrator Password, User Password, Login Page Greeting, Configuration Backup, Syslog /Mail Alert, Time and Date, Management, Reboot System, Firmware Upgrade and Activation.

It is used to control the bandwith of data transmission through configuration of Sessions Limit, Bandwidth Limit, and Quality of Servie (QoS).

It is a security feature which disallows any IP traffic (except DHCP-related packets) from a particular host until that host has correctly supplied a valid username and password.

VII-1 System Maintenance

For the system setup, there are several items that you have to know the way of configuration: System Status, TR-069, Administrator Password, User Password, Login Page Greeting, Configuration Backup, Syslog /Mail Alert, Time and Date, Management, Reboot System, Firmware Upgrade, Firmware Backup and Dashboard Control.

Below shows the menu items for System Maintenance.

System Maintenance System Status TR-069 **Administrator Password User Password Login Page Greeting** Configuration Backup SysLog / Mail Alert Time and Date **SNMP** Management Panel Control Self-Signed Certificate Reboot System Firmware Upgrade Firmware Backup **Dashboard Control**

Web User Interface

VII-1-1 System Status

The System Status displays basic network information of Vigor router including LAN and WAN interface status. Also available is the current firmware version and firmware related information.

System Status

		LAN			
	MAC Address	IP Address	Subnet Mask	DHCP Server	DNS
LAN1	14-49-BC-0A-8A-B8	192.168.1.1	255.255.255.0	ON	8.8.8.8
LAN2	14-49-BC-0A-8A-B8	192.168.2.1	255.255.255.0	ON	8.8.8.8
LAN3	14-49-BC-0A-8A-B8	192.168.3.1	255.255.255.0	ON	8.8.8.8
LAN4	14-49-BC-0A-8A-B8	192.168.4.1	255.255.255.0	ON	8.8.8.8
IP Routed Subnet	14-49-BC-0A-8A-B8	192.168.0.1	255.255.255.0	ON	8.8.8.8

Wireless LAN(2.4GHz)				
MAC Address	Frequency Domain	Firmware Version	SSID	
16-49-BC-4A-8A-B8	Europe	5.0.4.0	DrayTek	

Wireless LAN(5GHz)				
MAC Address	Frequency Domain	Firmware Version	SSID	
14-49-BC-0A-8A-B8	Europe	5.0.4.0	DrayTek_5G	

WAN				
Link Status	MAC Address	Connection	IP Address	Default Gateway
WAN1 Disconnected	14-49-BC-0A-8A-B9	DHCP Client		
WAN3 Disconnected	14-49-BC-0A-8A-BB			

		IPv6		
	Address	Sco	pe Internet Access Mode	
LAN	FE80::1649:BCFF:FE0A:8AB8/64	Link		

User Mode is OFF now.

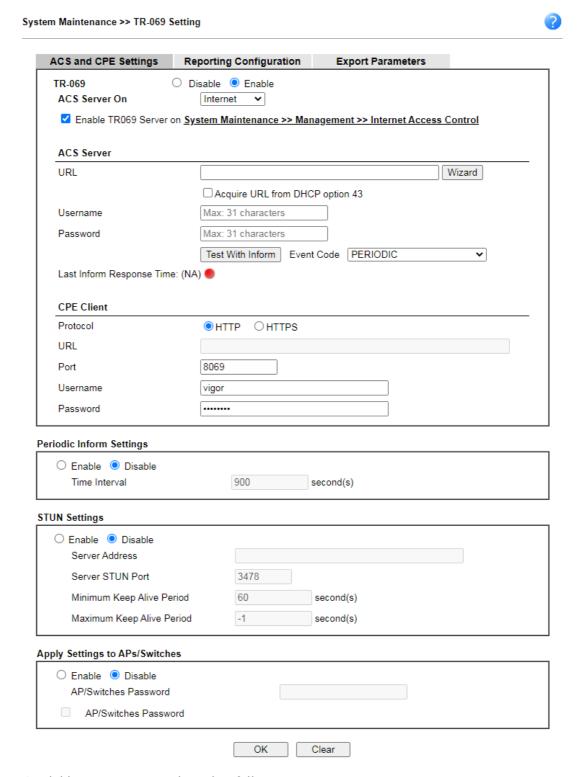

Item	Description
Model Name	Displays the model name of the router.
Firmware Version	Displays the firmware version of the router.
Build Date/Time	Displays the date and time of the current firmware build.
LAN	MAC Address - Displays the MAC address of the LAN Interface. IP Address - Displays the IP address of the LAN interface. Subnet Mask - Displays the subnet mask address of the LAN interface. DHCP Server - Displays the current status of DHCP server of the LAN interface. DNS

	- Displays the assigned IP address of the primary DNS.
WAN	Link Status
	- Displays current connection status of the WAN interface.
	MAC Address
	- Displays the MAC address of the WAN Interface.
	Connection
	- Displays the connection type of the WAN interface
	IP Address
	- Displays the IP address of the WAN interface.
	Default Gateway
	- Displays the assigned IP address of the default gateway.
IPv6	Address - Displays the IPv6 address for LAN.
	Scope - Displays the scope of IPv6 address. For example, IPv6 Link Local is non-routable and can only be used for local connections.
	Internet Access Mode - Displays the connection mode of the WAN interface.

VII-1-2 TR-069

This device supports the TR-069 standard for remote management of customer-premises equipment (CPE) through an Auto Configuration Server, such as VigorACS.

VII-1-2-1 ACS and CPE Settings

Item	Description	
TR-069	Enables or disables TR-069 functionality.	
ACS Server On	Choose the interface for connecting the router to the Auto Configuration Server. Enable TR069 Server on System Maintenance>>Management>>Internet Access Control - If enabld, a user will be allowed to access into TR-069 from WAN.	
	Internet Access Control ✓ Allow management from the Internet Domain name allowed ☐ FTP Server ☐ HTTP Server ✓ Enforce HTTPS Access ✓ HTTPS Server ☐ Telnet Server ✓ TR069 Server ☐ SSH Server ☐ SNMP Server ✓ Disable PING from the Internet	
ACS Server	 This section specifies the settings of the ACS Server. URL - Enter the URL for connecting to the ACS. Please refer to the Auto Configuration Server user's manual for detailed information. Wizard - Click it to enter the IP address of VigorACS server, port number and the handler. Acquire URL form DHCP option 43 - Select to acquire the ACS URL from DHCP option 43. Username/Password - Enter the credentials required to connect to the ACS server. Test With Inform - Click to send an inform message using the selected Event Code to test if the CPE is able to communicate with the VigorACS server. Event Code - Select an event for the inform test. Last Inform Response Time - Displays the time of the most recent Inform Response message received from the VigorACS. 	
CPE Client	This section specifies the settings of the CPE Client. Protocol - Select HTTPS if the connection is encrypted; otherwise select HTTP. Port - In the event of port conflicts, change the port number of the CPE. Username and Password - Enter the username and password that the VigorACS will use to connect to the CPE.	
Periodic Inform Settings	 Enable - The default setting is Enable, which means the CPE Client will periodically connect to the ACS Server to update its connection parameters at intervals specified in the Interval Time field. Time Interval - Set interval time or schedule time for the router to send notification to CPE. Disable - Select Disable to turn off periodic notifications. 	

STUN Settings

STUN allows the ACS Server to connect to the CPE Client even when the client is behind a network address translator (NAT).

Disable - The default setting is Disable.

Enable - Please Enter the relational settings listed below:

- Server Address Enter the IP address of the STUN server.
- Server Port Enter the port number of the STUN server.
- Minimum Keep Alive Period If STUN is enabled, the CPE must periodically transmit binding requests to the server for the purpose of maintaining the binding with the Gateway. Enter the minimum interval between keep-alive messages that the CPE client sends to the ACS server. The default setting is 60 seconds.
- Maximum Keep Alive Period If STUN is enabled, the CPE must send binding request to the server for the purpose of maintaining the binding with the Gateway. Enter the maximum interval between keep-alive messages that the CPE client sends to the ACS server. A value of -1 indicates that no maximum period is specified.

Apply Settings to APs/Switches

This feature is able to apply TR-069 settings (including STUN and ACS server settings) to all of APs managed by Vigor2135 at the same time.

Disable - TR-069 and Related settings will not be applied to VigorAPs.

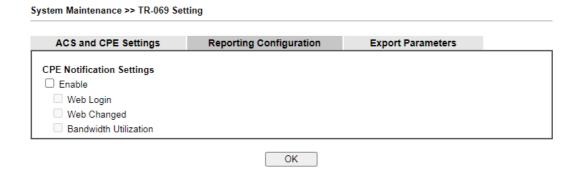

Enable - TR-069 settings will be applied to VigorAPs after clicking OK. The VigorAP password must be specified.

- AP Password Enter the password of the VigorAP that you want to apply Vigor2135's TR-069 settings.
- Specify STUN Settings for APs/Switches After clicking the Enable radio button for Apply Settings to APs, if you want to apply specific STUN settings (i.e., different from the Vigor2135 STUN settings) to VigorAPs to meet specific requirements, check this box and enter the server IP address, server port, and minimum and maxmum keep alive periods respectively.

Select OK to save changes on the page, or Clear to reset all settings to factory defaults.

VII-1-2-2 Reporting Configuration

Information related to the router's health are divided into several categories and listed in this field. After checking the item(s), Vigor router will arrange and send corresponding data to VigorACS as a reference for the system administrator.

Available settings are explained as follows:

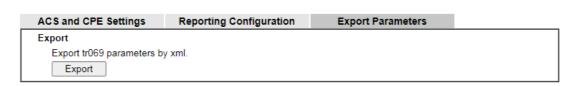

Item	Description
CPE Notification Settings	Enable - Check the box to select the notification item(s).
	Vigor router will send the utilization status to VigorACS.

Click OK to save changes on the page.

VII-1-2-3 Export Parameters

Click Export to save the TR-069 parameter settings as an ".xml".

System Maintenance >> TR-069 Setting

VII-1-3 Administrator Password

This page allows you to set or change the administrator password.

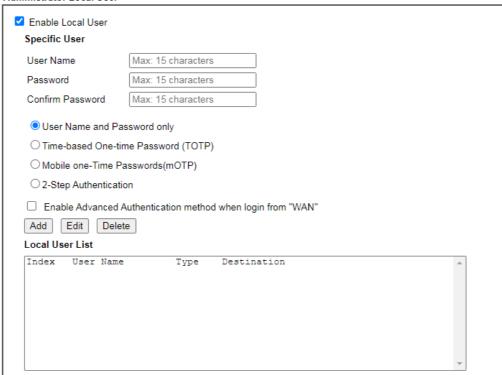

System Maintenance >> Administrator Password Setup

Administrator Password	
Old Password	Max: 83 characters
New Password	Max: 83 characters
Confirm Password	Max: 83 characters
Password Strength:	Weak Medium Strong
Strong password requirement 1. Have at least one upper-ca 2. Including non-alphanumeri	se letter and one lower-case letter.
☑ Enable 'admin' account login	to Web UI from the Internet
Enable Advanced Authenticat	ion method when login from "WAN"
O Time-based One-time Passwo	rd (TOTP)
Mobile one-Time Passwords(r	nOTP)
PIN Code ******	Secret ************
2-Step Authentication	
Send Auth code via	
SMS Profile 1 - ?	?? V Recipient Number
Mail Profile 1 - ?	?? V Mail Address

Note:

Password can contain only a-z A-Z 0-9 , ; : . " <> * + = | ? @ # ^ ! ()

Administrator Local User

OK

Item	Description
Administrator Password	The administrator can login web user interface of Vigor router to modify all of the settings to fit the requirements.
	Old Password - Enter the current password. The factory default is "admin".
	New Password - Enter the new password. The maximum length of the password is 23 characters.
	Confirm Password - Enter the new password again for confirmation.
	Enable 'admin' account login to Web UI from the Internet Select to allow the administrator to log in from the Internet This option is enabled when Administrator Local User is enabled (see below).
	Enable Advanced Authentication method when login from "WAN" - Advanced authentication method can offer a more secure network connection. Select to require mOTP or TOTE or 2-step authentication when logging in from the WAN.
	 Time-based One-time Password (TOTP) - Please make sure the time zone of your router is correct. Then, install Google Authenticator APP on your cell phone. Open the APP to scan the QR code on this page. A one-time password will be shown on your phone.
	 Enable Advanced Authentication method when login from "WAN" Time-based One-time Password (TOTP)
	Secret: ISQUC3CEGNLWIU3DNFAUGY2OMFXU22LKMFTG2ZTLNBRTOWLXJ5FGSQTFJU4GE22V
	Validation Code Verify Obtain and Time Passing of (mOTP) In the filed of Validation Code enter the one time
	In the filed of Validation Code, enter the one-time password and click Verify.
	■ Enable admin' account login to Web Ul from the internet ☑ Enable Advanced Authentication method when login from "WAN" ⑧ Time-based One-time Password (TOTP)
	Secret: JZKGCY3SN52DK6TMPJLUG4RQKJVXCSCBNU4F52XCGJZXGTDFKNLHG5LU0F3EGNSJ
	Now, the configuration is finished. You will be asked to enter the 2FA code on the after passing the username and password authentication.

	Capyright 2000-2021 Drayful Curp. All Rights Reserved. Capyright 2000-2021 Drayful Curp. All Rights Reserved.
	 Mobile one-Time Password (mOTP) - Select to allow the use of mOTP passwords. Enter the PIN Code and Secret settings for getting one-time passwords.

 2-Step Auth code via <u>SMS Profile</u> and/or <u>Mail Profile</u> -Select the SMS and/or Mail profiles and the destination SMS number and/or email address for transmitting the password.

Administrator Local User

Usually, the system administrator has the highest privilege to modify the settings on the web user interface of the Vigor router. However, in some cases, it might be necessary to have other users in LAN to access into the web user interface of Vigor router.

This feature allows you to add more administrators who can then log in to the web interface, with the same privileges as the administrator.

Enable Local User - Check the box to allow other users to administer the router.

Specific User - Create the new user account as the local user. Then specify the authentication method (dividing into Basic and Advanced) for the user account.

- User Name Enter a user name.
- Password Enter the password for the local user.
- Confirm Password Enter the new password again for confirmation.
- User Name and Password only If selected, you need to enter a user name and password.
- Time-based One-time Password (TOTP) Please make sure the time zone of your router is correct. Then, install Google Authenticator APP on your cell phone. Open the APP to scan the QR code on this page. A one-time password will be shown on your phone.

In the filed of Validation Code, enter the one-time password and click Verify.

Now, the configuration is finished. You will be asked to enter the 2FA code on the after passing the username and password authentication.

- Mobile one-Time Password (mOTP) Select to allow the use of mOTP passwords. Enter the mOTP PIN Code and Secret that will be used to generate the one-time passwords.
- 2-Step Authentication via <u>SMS Profile</u> and/or <u>Mail Profile</u> Select the SMS and/or Mail profiles and the destination SMS number and/or email address for transmitting the password.
- Enable Advanced Authentication method when login from "WAN" - Advanced authentication method can offer a more secure network connection. Select to require mOTP or TOTP or 2-step authentication when logging in from the WAN.
- Add After entering the user name and password above, click this button to create a new local user. The new user will be shown on the Local User List immediately.
- Edit If you wish to change a user in the Local User List, select it, perform the necessary modifications, and click this button to update the user.
- Delete If you wish to delete a user in the Local User List, select it and click this button to remove it.
- Local User List Shows all the users that are set up to administer the router.

Click OK to save changes on the page, and you will be directed to the login screen. Please log in with the new password.

VII-1-4 User Password

This page allows you to set new password for user operation.

ser Pas	ssword		Set to Factory Defaul
	Password	Max: 83 characters	
	Confirm Password	Max: 83 characters	
	Password Strength:	Weak Medium Strong	
	Strong password requiren 1. Have at least one uppe 2. Including non-alphanun	r-case letter and one lower-case letter.	

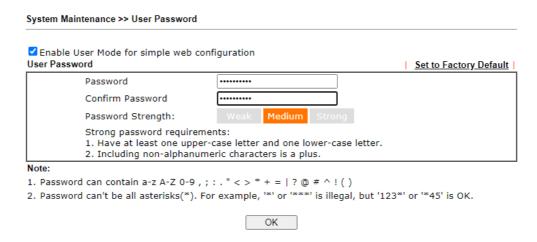

Available settings are explained as follows:

Item	Description
Enable User Mode for simple web configuration	Check this box to enable User Mode for web user interface with the password typed here for simple web configuration.
	The simple web user interface settings differ from those on the full web user interface seen when logged in using the administrator password.
Password	Enter the password. The maximum length of the password is 31 characters.
Confirm Password	Enter the password again for verification.
Password Strength	Shows the security strength of the password specified above.
Set to Factory Default	Click to return to the factory default setting.

Click OK to save changes on the page, and you will be directed to the login screen. Please window will appear. Please log in with the new password.

Here are the steps involved in setting up the router for User Mode Access:

- 1. Navigate to System Maintenance>>User Password in the web user interface.
- 2. Check the box of Enable User Mode for simple web configuration to enable user mode operation. Enter a new password in the Password field and click OK.

3. The following screen will appear. Click OK.

4. Log out the Vigor router web user interface by clicking the Logout button.

5. The following window will be shown. Enter the new user password in the Password field and click Login.

6. The main screen with User Mode will be shown as follows:

Only basic settings are available in User Mode. These are a subset of the Admin Mode settings.

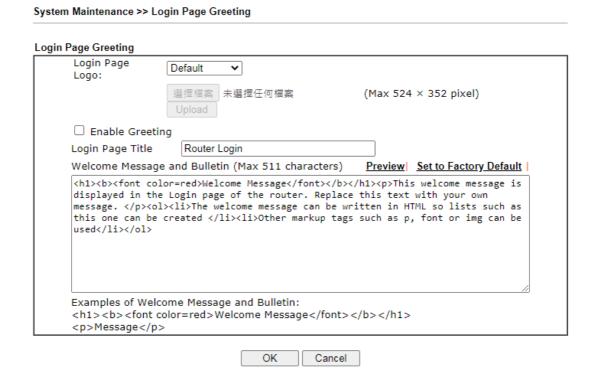

Info

Setting in User Mode can be configured as same as in Admin Mode.

VII-1-5 Login Page Greeting

When you want to access into the web user interface of Vigor router, the system will ask you to offer username and password first. At that moment, the background of the web page is blank and no heading will be displayed on the Login window. This page allows you to specify login URL and the heading on the Login window if you have such requirement.

This section allows you to customize the login page by adding a message and/or setting the page title.

Item	Description
Login Page Logo	Set an image which will be shown above the log in window. Default - The Enable Greeting feature is available to set the login page title. Blank - No image / no greeting.
	Upload a file - Choose an image file and click Upload. Later the selected image will be shown on the log in window.
Enable Greeting	Check this box to enable the login customization function.
Login Page Title	Enter a brief description (e.g., Welcome to DrayTek) which will be shown on the heading of the login dialog.
Welcome Message and Bulletin	Enter words or sentences here. It will be displayed for bulletin message. In addition, it can be displayed on the login dialog at the bottom. Note that do not enter URL redirect link here.
Preview	Click to preview the customized login window based on the settings entered on this page.

Set to Factory Default

Click to return to the factory default setting.

Below shows an example of a customized login page with the values entered in the Login Page Title and Welcome Message and Bulletin fields.

Welcome Message

This welcome message is displayed in the Login page of the router. Replace this text with your own message.

- 1. The welcome message can be written in HTML so lists such as this one can be created
- 2. Other markup tags such as p, font or img can be used

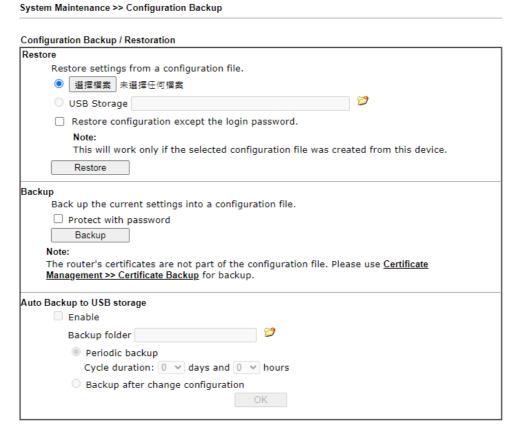

VII-1-6 Configuration Backup

This function allows the backup and restoration of router settings. In addition to restoring Vigor2135's own configuration backup, it is possible to restore backups from certain DrayTek routers such as Vigor2133 series on the Vigor2135.

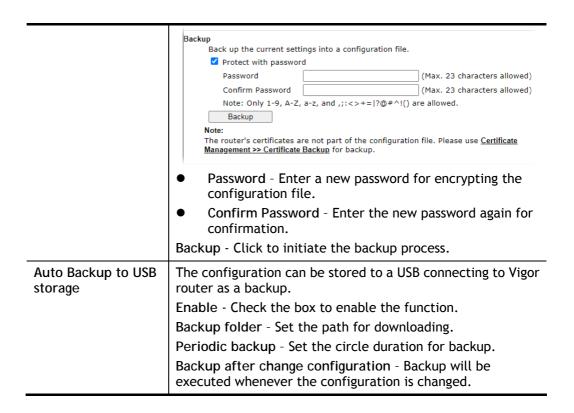

Backing up the Configuration

Follow the steps below to backup your configuration.

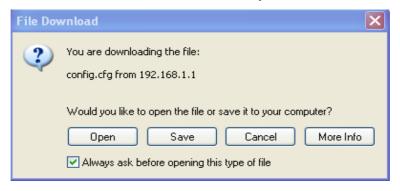

1. Go to System Maintenance >> Configuration Backup. The following page will be shown.

Item	Description
Restore	Restore settings from a configuration file - Click the Select File button to specify a file to be restored or click USB Storage (if a USB storage disk connected) to choose the configuration file.
	Restore configuration except the login password - Select to exclude the password from getting restored from the backup.
	Restore - Click to initiate restoration of configuration. If the backup file is encrypted, you will be asked to enter the password.
Backup	Click it to perform the configuration backup of this router.
	Protect with password- Select to encrypt the backup with a password. You will be prompted to enter the password as shown below:

2. Click the Backup button, and the File Download dialog will be shown. Depending on your browser, you may be prompted to select a location to save the file, or the file may be saved in the default download location of your browser.

The configuration will download automatically to your computer as a file named config.cfg.

The above example is using Windows platform for demonstrating examples. The Mac or Linux platform will appear different windows, but the backup function is still available.

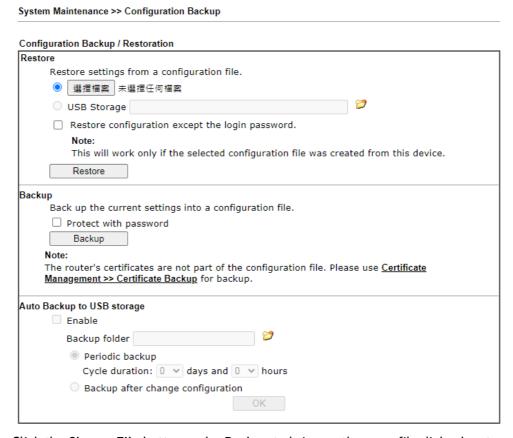

Info

Configuration Backup does not include certificates stored on the router. Please back up certificates separately by going to Certificate Management >> Certificate Backup.

Restoring the Configuration

 Go to System Maintenance >> Configuration Backup. The following windows will be shown.

- 2. Click the Choose File button under Backup to bring up the open file dialog box to select the configuration file to be uploaded and restored.
- 3. Click the Restore button and wait for few seconds.

VII-1-7 Syslog/Mail Alert

SysLog function is provided for users to monitor router.

System Maintenance >> SysLog / Mail Alert Setup

SysLog / Mail Alert Setup		
SysLog Access Setup	Mail Alert Setup	
SysLog Access Setup ☑ Enable Syslog Save to: ☑ Syslog Server ☐ USB Disk Maximum Syslog folder sp When Syslog folder is full: Router Name Server IP/Hostname Destination Port Mail Syslog Enable syslog message: ☑ Firewall Log ☑ VPN Log	✓ Enable Interface SMTP Server SMTP Port Mail To Sender Address ☐ Use SSL ☐ Authentication Username Password Enable E-Mail Alert: ☑ DoS Attack ☑ APPE	Send a test e-mail Any 25
✓ User Access Log ✓ WAN Log ✓ Router/DSL information	✓ APPE ✓ VPN LOG □ APPE Signature	
✓ Router/DSL information ✓ WLAN Log	☐ Debug Log	

Note:

- 1. USB Syslog space is available from 256-1024 MB or 1-16 GB.
- 2. Mail Syslog cannot be activated unless USB Disk is ticked for "Syslog Save to".
- 3. Mail Syslog feature will send the Syslog when it is full.
- 4. We only support secured SMTP connection on port 465.

Item	Description
SysLog Access Setup	Enable - Select to enable the Syslog function. Syslog Save to - Check Syslog Server and / or USB Disk.
	Syslog Server - Events will be sent to a Syslog server.
	 USB Disk - Events will be saved to a USB storage device connected to the router.
	 Maximum Syslog folder space - Set a space (unit GB/MB) to store event logs.
	 When Syslog folder is full - Specify the action (overwrite the olderest logs or stop logging) to be executed.
Router Name	Shows the name of the router set in System Maintenance >> Management. This name will be used to identify the router in the Syslog entries.
	To set or modify the router name, click the hyperlink and you will be taken to System Maintenance >> Management where you can enter the value.
	Server IP Address /Hostname - Enter the IP address / hostname of the Syslog server.
	Destination Port - Enter the port for the Syslog server.

	Mail Syslog - Select to enable sending Syslog messages by email.
	Enable syslog message - Select the events to be recorded by syslog.
Mail Alert Setup	Enable - Select to enable the Mail Alert.
	Send a test e-mail - Click to send a test email message using the settings below.
	Interface - Specify the WAN interface for a mail passing through.
	SMTP Server - Enter the address of the SMTP server used to send email.
	SMTP Port - Enter the port of the SMTP server. Default setting is 25.
	Mail To - Enter the email address of the recipient.
	Sender Address - Enter the email address of the sender.
	Use SSL - Check this box to use port 465 for SMTP server for some e-mail server uses https as the transmission method.
	Authentication - Select this checkbox and enter the username and password if the SMTP server requires authentication.
	User Name - Enter the user name for authentication.
	Password - Enter the password for authentication.
	Enable E-mail Alert - Select the event types that will trigger email alerts.

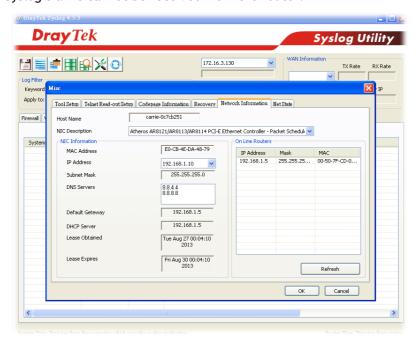

Select OK to save changes on the page, or Clear to reset all settings to factory defaults.

To view the Syslog message, please follow the steps below:

- 1. On the Syslog / Mail Alert Setup screen, enter the monitor PC's IP address in the Server IP Address field.
- 2. Install the Router Tools from DrayTek web site. After installation, start Syslog by clicking on Router Tools>>Syslog in the Windows Start Menu.

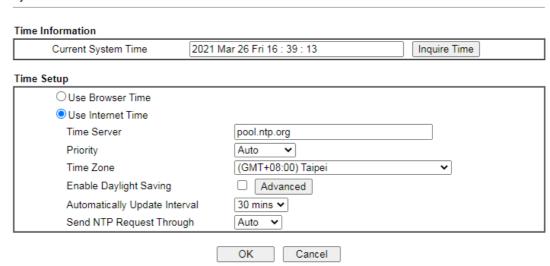

3. In the Syslog application, select the router you wish to monitor. Rember to select the network adapter to be used to connect to the router under Network Information, or else Syslog traffic cannot be received from the router.

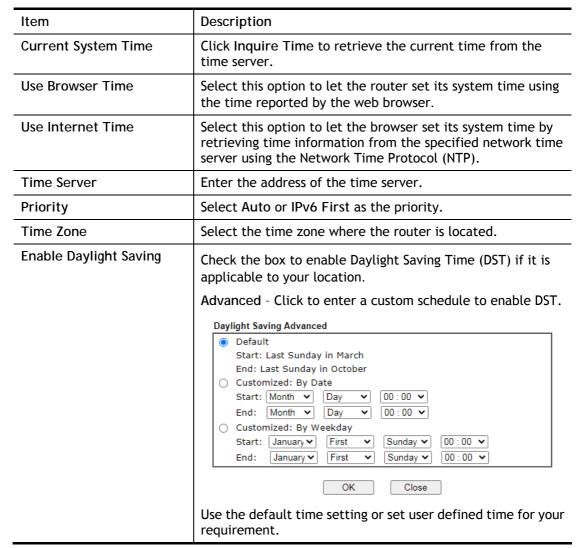

VII-1-8 Time and Date

This section allows you to configure settings related to the system date and time.

System Maintenance >> Time and Date

	Default - Uses the default DST schedule for the time zone. Date Range - Select this option if DST starts and ends on fixed dates.
	Yearly - Select this option if DST starts and ends on certain days of the week.
Automatically Update Interval	Select the time interval at which the router updates the system time.
Send NTP Request Through	Specify a WAN interface to send NTP request for time synchronization.

Select OK to save changes on the page, or Cancel to discard changes without saving.

VII-1-9 SNMP

This section allows you to configure settings for SNMP and SNMPv3 services.

The SNMPv3 is more secure than SNMP through the use of encryption (supports AES and DES) and authentication (supports MD5 and SHA) for the management needs.

Item Description	
------------------	--

Enable SNMP Agent	Check to enable SNMP function. Then, enable SNMPv3 Agent / SNMPv2C Agent/ SNMPv1 Agent.
Enable SMMDV2 Agent	
Enable SNMPV3 Agent	Check to enable SNMPV3 function. USM User - USM means user-based security mode.
	Enter the username to be used for authentication. The maximum allowed length is 23 characters.
	Auth Algorithm - Choose one of the hashing methods to be used with the authentication algorithm.
	Auth Password - Enter a password for authentication. The maximum allowed length is 23 characters.
	Privacy Algorithm - Choose an encryption method as the privacy algorithm.
	Privacy Password - Enter a password for privacy. The maximum allowed length is 23 characters.
Get Community	Enter the Get Community string. The default setting is public. Devices that send requests to retrieve information using get commands must pass the correct Get Community string.
	The maximum allowed length is 23 characters.
Set Community	Enter the Set Community string. The default setting is private. Devices that send requests to change settings using set commands must pass the correct Set Community string. The maximum length of the text is 23 characters.
Manager Host IP (IPv4)	Enter the IPv4 address of hosts that are allowed to issue SNMP commands. If this field is left blank, any IPv4 LAN host is allowed to issue SNMP commands.
Manager Host IP (IPv6)	Enter the IPv6 address of hosts that are allowed to issue SNMP commands. If this field is left blank, any IPv6 LAN host is allowed to issue SNMP commands.
Trap Community	Enter the Trap Community string. The default setting is public. Devices that send unsolicited messages to the SNMP console must pass the correct Trap Community string. The maximum length of the text is 23 characters.
N 1161 11 11 115 /15 /	
Notification Host IP (IPv4)	Enter the IPv4 address of hosts that are allowed to be sent SNMP traps.
Notification Host IP (IPv6)	Enter the IPv6 address of hosts that are allowed to be sent SNMP traps.
Trap Timeout	The default setting is 10 seconds.

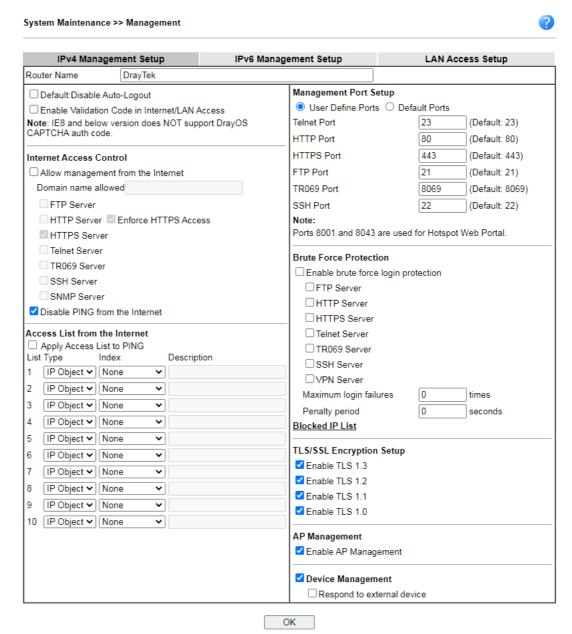

Select OK to save changes on the page, or Cancel to discard changes without saving.

VII-1-10 Management

This page allows you to manage the settings for Internet/LAN Access Control, Access List from Internet, Management Port Setup, TLS/SSL Encryption Setup, CVM Access Control and Device Management.

Management setup for IPv4 and IPv6 are on separate tab pages.

IPv4 Management Setup

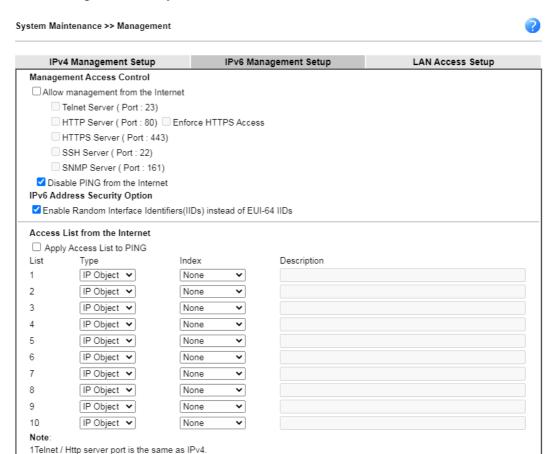

Item	Description
Router Name	Enter the router name as provided by ISP.
Default: Disable Auto-Logout	If enabled, the auto-logout function for web user interface will be disabled.

	Off P6
	The web user interface will not terminate until you manually click the Logout icon.
	Logout
Enable Validation Code in Internet/LAN Access	If enabled, Vigor router will require users to enter a validation code as shown in an image when they log in.
Internet Access Control	Allow management from the Internet - Enable the checkbox to allow system administrators to login from the Internet, and then select the specific services that are allowed to be remotely administered.
	Domain name allowed - This setting is only available if DNS filtering is enabled, applying DNS filter profile in firewall rules, or enabling DNS Filter Local Setting. The router will only allow connections to the WebUI using domain addresses configured in either DDNS profiles or this section.
	If DNS filtering is disabled, this setting will be disabled, and any domain address that resolves to the router's WAN IP address can be used to connect to the WebUI.
	Disable PING from the Internet - Select to reject all PING packets from the Internet. For increased security, this setting is enabled by default.
Access List from the Internet	The ability of system administrators to log into the router can be restricted to up to 10 specific hosts or networks.
	Apply Access List to PING - When this option is checked and Disable PING from the Internet is unchecked, pings originating from the Internet will be accepted only if they are from one of the IP addresses and/or subnet masks specified below. This option has no effect if Disable PING from the Internet is checked, which blocks all pings from the Internet.
	Type - Select IP Object or Hostname.
	Index - Select the index number of a configured IP object, keyword object or IP group object. Description - Shows a brief comment for the selected IP object (with subnet mask).
Management Port Setup	User Define Ports - Check to specify user-defined port numbers for the Telnet, HTTP, HTTPS, FTP, TR-069 and SSH servers. Default Ports - Check to use standard port numbers for the
	Telnet and HTTP servers.
Brute Force Protection	Any client trying to access into Internet via Vigor router will be asked for passing through user authentication. Such feature can prevent Vigor router from attacks when a hacker tries every possible combination of letters, numbers and symbols until find out the correct combination of password.

	Enable brute force login protection - Select to enable detection of brute force login attempts.
	Maximum login failure - Specify the maximum number of failed login attempts before further login is blocked.
	Penalty period - Set the lockout time after maximum number of login attempts has been exceeded. The user will be unable to attempt to log in until the specified time has passed.
	Blocked IP List - Display, in a new browser window, IP addresses that are currently blocked from logging into the router.
TLS/SSL Encryption Setup	Enable TLS1.0/1.1/1.2/1.3 - Check the box to enable TLS 1.0/1.1/1.2/1.3 encryption protocols.
	For improved security, the HTTPS and SSL VPN servers that are built into the router have been upgraded to TLS 1.x protocol. It is recommended to upgrade your web browser or SmartVPN client to a version that supports TLS protocols that are far more secure than SSL.
AP Management	Enable AP Management - Check to enable the access point management function. If not, menu items related to Central Management>>AP will be hidden.
Device Management	Check to enable the device management function.
	Respond to external device - If selected, Vigor2135 will function as a slave device. When an external device (master device) sends packets to the Vigor2135 to attempt to manage it, the Vigor2135 will respond to the request coming from the external device which is able to manage Vigor2135.

Select OK to save changes on the page.

IPv6 Management Setup

OK

Available settings are explained as follows:

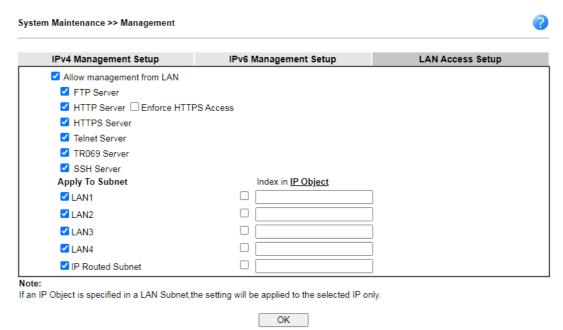

2Access list type: Hostname, single IP address supported for corresponding domain name.

Item	Description
Management Access Control	Allow management from the Internet - Check to enable the function. Select the servers that system administrators are allowed to manage from the Internet.
	Disable PING from the Internet - Check to reject all PING packets from the Internet. For increased security, this setting is enabled by default.
IPv6 Address Security Option	Enable Random Interface Identifiers (IIDs) The IPv6 address will be generated randomly but not using LAN/WAN MAC to prevent the attack from the hacker.
Access List from the Inernet	You could specify that the system administrator can only login from a specific host or network defined in the list. A maximum of three IPs/subnet masks is allowed.
	Apply Access List to PING - When this option is checked and Disable PING from the Internet is unchecked, pings originating from the Internet will be accepted only if they are from one of the IP addresses and/or subnet masks specified below. This option has no effect if Disable PING from the Internet is checked, which blocks all pings from the Internet.
	Type - Select IP Object or Hostname.

Index - Select the index number of a configured IPv6 obj
--

Select OK to save changes on the page.

LAN Access Setup

Available settings are explained as follows:

Item	Description	
Allow management from LAN	Enable the checkbox to allow system administrators to login from LAN interface. There are several servers provided by the system which allow you to manage the router from LAN interface. Check the box(es) to specify.	
Apply To Subnet	Check the LAN interface for the administrator to use for accessing into web user interface of Vigor router.	
	Index in <u>IP Object</u> - Enter the index number of the IP object profile. Related IP address will appear automatically.	

Select OK to save changes on the page.

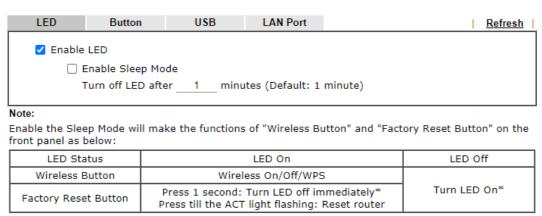

VII-1-11 Panel Control

You may customize the behavior of the LEDs, buttons, WLAN, USB and LAN ports on the front panel.

For LED

By default, LEDs on the front panel illuminate or blink during operation to show the status of the various functions on the router. However, you may configure them to remain off at all times, or remain off until a button is pressed to wake them up.

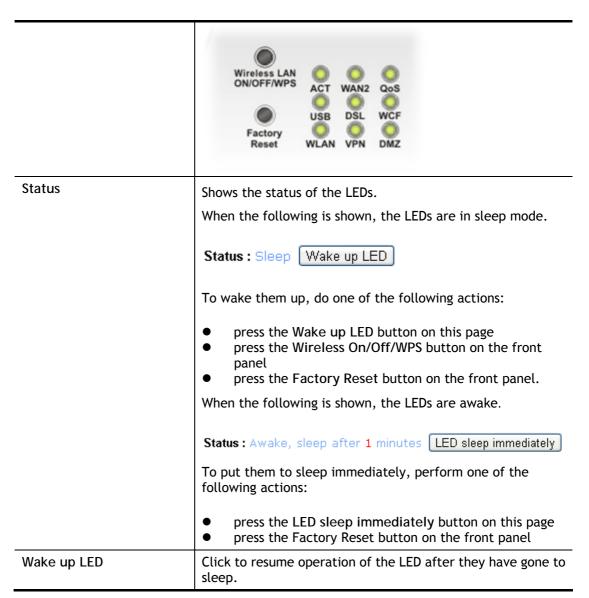

System Maintenance >> Panel Control

^{*}Still functional even the buttons are disabled.

OK

Item	Description
Refresh	Click to refresh the page to display the latest information.
Enable LED	Select to enable the LEDs to function according to the configured settings. Deselect to disable LEDs entirely.
Enable Sleep Mode	Select to let the system turn off the LEDs after the specified number of minutes has elapsed.
	When Sleep Mode is enabled, the LEDs can be woken up by pressing one of the following buttons:
	Wireless LAN ON/OFF/WPS on the front panel
	Factory Reset on the front panel
	Wake up LED on this configuration page

Select OK to save changes on the page.

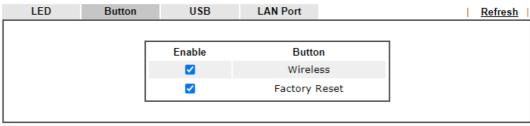

For Button

The primary functions of the Factory Reset and Wireless ON/OFF/WPS front-panel buttons (reset to factory defaults and wireless control, respectively) are enabled by default, but they can be enabled or disabled as needed.

When the Factory Reset button is set to Disabled, the router cannot be reset during normal operation. Other functions of the reset button (such as starting up the TFTP server to upload firmware during power on, and controlling the illumination of the front panel LEDs when LED sleep mode is enabled) can still be used.

When the Wireless ON/OFF/WPS button is set to Disabled, the button cannot be used to turn on or off the wireless network, nor can it be used to start the WPS pairing process. However, the front panel LEDs can be woken up when LED sleep mode is enabled.

Click the Button tab to get the following page.

Note:

Enable the Sleep Mode will make the functions of "Wireless Button" and "Factory Reset Button" on the front panel as below:

LED Status	LED On	LED Off
Wireless Button	Wireless On/Off/WPS	
Factory Reset Button	Press 1 second: Turn LED off immediately* Press till the ACT light flashing: Reset router	Turn LED On*

^{*}Still functional even the buttons are disabled.

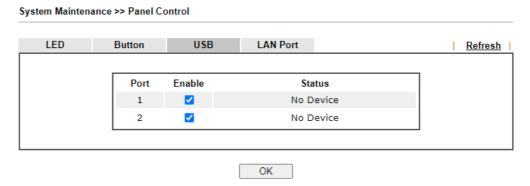

Available settings are explained as follows:

Item	Description
Refresh	Click to refresh the page to display the latest information.
Enable Factory Reset Button	The default value is Enabled. Deselect to disable the reset function of the factory reset button. Disabling the Factory Reset button only prevents it from being used to reboot Vigor router with default settings. It can still be used to wake up the LEDs when LED sleep mode is enabled.
Enable Wireless Button	The default value is Enabled. Deselect to disable the ability of the Wireless button to control WLAN and WPS functions. Disabling the wireless button only prevents it from being used to control WLAN functions. It can still be used to wake up the LEDs when LED sleep mode is enabled.

Select OK to save changes on the page.

For USB

The USB ports can be individually enabled or disabled. When a USB port is disabled, attached devices will not be recognized by the router.

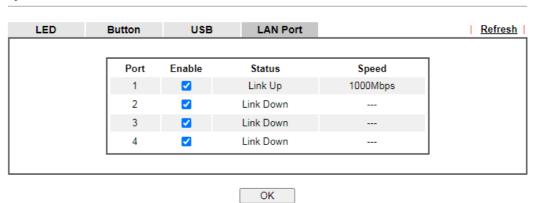

Item	Description
Refresh	Click to refresh the page to display the latest information.
Port	The number corresponds to the USB port number shown on the front panel.
Enable	Deselect to disable the USB port. The default value is enabled.
Status	Shows the status of the USB port. No device - no USB device is connected to the port. Connected - a USB device is connected to the port. the USB port is disabled.

Select OK to save changes on the page.

For LAN Port

The 5 LAN ports can be individually enabled or disabled. When a LAN port is disabled, attached devices will not be recognized by the router.

Available settings are explained as follows:

Item	Description
Refresh	Click to refresh the page to display the latest information.
Port	The number corresponds to the LAN port number shown on the front panel.
Enable	Deselect to disable the LAN port. The default value is enabled.
Status	Shows the status of the USB port. Link Up - An active Ethernet device is connected to the port. Link Down - No active Ethernet device is detected. The LAN port is disabled.
Speed	Shows the negotiated speed of the LAN port. 1000Mbps - Negotiated speed of the LAN port is 1000 Mbps. 100Mbps - Negotiated speed of the LAN port is 100 Mbps. 10Mpbs - Negotiated speed of the LAN port is 10 Mbps. The LAN port is disabled or there is no active device connected.

Select OK to save changes on the page.

VII-1-12 Self-Signed Certificate

A self-signed certificate is a *unique* identification for the device (e.g., Vigor router) which generates the certificate by itself to ensure the router security. Such self-signed certificate is signed with its own private key.

The self-signed certificate can be used for services such as SSL VPN and HTTPS. In addition, it can be created for free by using a wide variety of tools.

System Maintenance >> Self-Signed Certificate

VII-1-13 Reboot System

The Web user interface may be used to restart your router. Click Reboot System from System Maintenance to bring up the following page.

Available settings are explained as follows:

Item	Description
Reboot System	Select one of the following options, and press the Reboot Now button to reboot the router.
	Using current configuration - Select this option to reboot the router using the current configuration.
	Using factory default configuration - Select this option to reset the router's configuration to the factory defaults before rebooting.
Auto Reboot Time Schedule	Schedule Profile - Select up to 4 user-configured schedules to reboot the router on a scheduled basis.

Select OK to save changes on the page, or Cancel to discard changes without saving.

Info

When the system pops up Reboot System web page after you configure web settings, please click Reboot Now to reboot your router for ensuring normal operation and preventing unexpected errors of the router in the future.

VII-1-14 Firmware Upgrade

Click System Maintenance>> Firmware Upgrade to upgrade firmware upgrade.

Item	Description
Firmware Versiono Status	Download Directly - Click to download the latest firmware. Latest Firmware Detail - Click to check for updated firmware. Any available new firmware files will be displayed and you can download any one of them by clicking Download. After the file has been downloaded, click Select followed by Upgrade to perform the firmware upgrade.
	Language Version Filename Action English 4.2.3.1 Vigor2135_v4.2.3.1.zip Download
Web Firmware Upgrade	Click Browse to select the firmware file, followed by Upgrade to start the upgrade process, or Preview to display detailed information about the selected firmware file:

VII-1-15 Firmware Backup

The firmware for Vigor router can be saved on the host as a backup firmware. After that, if the router crashes due to the firmware error, the backup firmware will be applied to make the router run normally.

Automatic Firmware Recovery		
En	able automatic firmware recovery	
	he router unexpectedly reboots three times in a row then the backup firmware will restored to the unit on the third reboot.	
Backup Set	ting	
○Bac	kup after reboot	
Bac	kup after system uptime of 1 day 0 hour (max. 7 days)	
○Bac	kup manually	
	Firmware: 4.3.2.1 STD	
Backup	1 IIIII Walc. 4.5.2.1_01B	

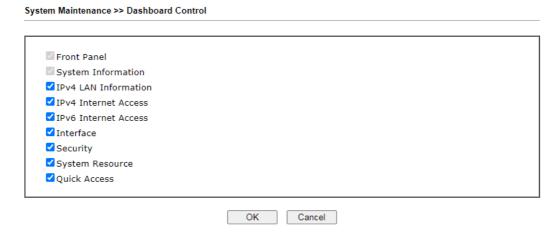

Available settings are explained as follows:

Item	Description
Automatic Firmware Recovery	Enable automatic firmware recovery- If this option is enabled, the router will restore the most recently backed-up firmware after the router reboots unexpectedly three times.
Backup Setting	This option controls the backup behavior of the router.
	Backup after reboot - The router makes a copy of the current firmware immediately after it reboots
	 Backup after system uptime The router makes a copy of the current firmware after it has run for the specified length of time after boot-up.
	 Backup manually - the router will not automatically create a backup copy of the firmware. Click this option and click OK, firmware backup will be performed immediately.
	Backup Firmware - Displays recent firmware backup version.
	Last backup - Displays the time of recent firmware backup.

Select OK to save changes on the page, or Cancel to discard changes without saving.

VII-1-16 Dashboard Control

There are nine groups of setting information which can be displayed on Dashboard as a reference for administrator/user. Except for Front Panel and System Information, the settings information regarding to the groups listed on this page can be hidden if required.

VII-2 Bandwidth Management

Sessions Limit

When LAN clients share a common public IP address by means of Network Address Translation (NAT), the router must track NAT sessions so that traffic to and from the WAN can reach the intended destinations. There is a finite number of sessions that can be tracked by the router, and by setting session limits will ensure that the router does not run out of resources. This is especially important when P2P applications are used. P2P applications, such as BitTorrent, that attempt to simultaneously establish connections to as many WAN hosts as possible.

Bandwidth Limit

Bandwidth Limit ensures LAN clients get their fair share of network bandwidth by placing restrictions on upstream and downstream network speeds.

Quality of Service (QoS)

QoS (Quality of Service) ensures that all LAN clients receive their fair share of bandwidth that is required for applications to function properly and efficiently.

Without QoS, it is possible that certain applications may consume excessive network resources that they degrade performance of more important applications, especially ones that are less tolerant of jitter (delay variation) or lost or delayed packets. Additionally, at times of network congestion, QoS is able to prioritize different types of traffic according to their predefined priority, thus ensuring traffic of higher importance gets processed first.

A typical QoS deployment consists of two components:

- Classification: Identifying low-latency or crucial applications and marking them for high-priority service level enforcement throughout the network.
- Scheduling: Prioritizing packets by assigning them to different queues and service types according to service levels.

APP QoS

APP QoS allows QoS to be applied to select protocols and applications.

Protocols and applications fall into two categories: Traceable and Untraceable. Traceable applications are those whose traffic can be 100% traced, and can be assigned a specific QoS class. Untraceable applications, on the other hand, are detected when they attempt to establish connections to remote hosts, and all traffic between the remote hosts and the local network will be placed under QoS, within the same QoS class.

Web User Interface

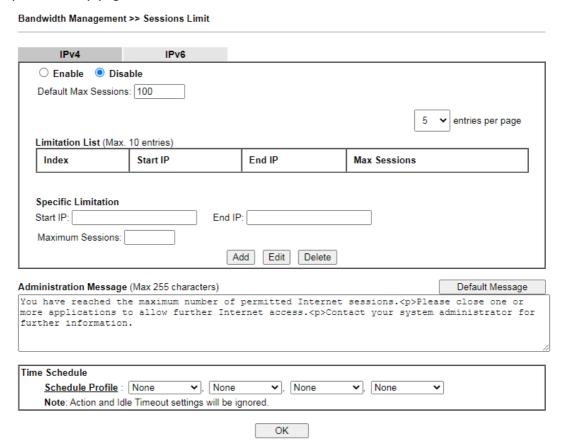

Bandwidth management ensures efficient allocation of network bandwidth for various applications.

To set up Bandwidth Management, from the Main Menu, select Bandwidth Management.

VII-2-1 Sessions Limit

To configure Sessions Limit, from the Bandwidth Management menu, select Sessions Limit to open the setup page.

Item	Description
Enable / Disable	Enable - Select to activate session limit function. Disable - Select to deactivate session limit function. Default Max Sessions - The default maximum number of sessions allowed per LAN client, unless overridden by specifying a different number in the Limitation List.

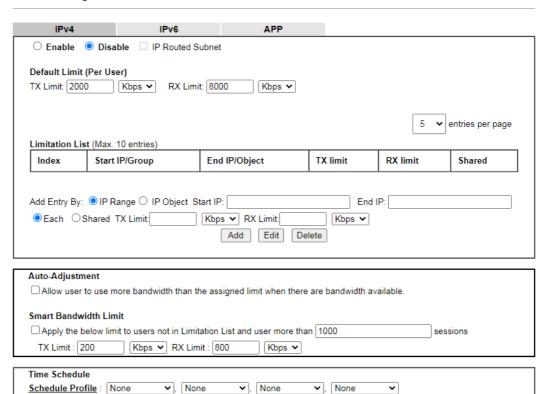

Limitation List	Displays specific limitation entries.
Specific Limitation	Start IP - The beginning IP address for this limit entry.
	End IP - The ending IP address for limit entry.
	Max Sessions - The maximum number of NAT sessions allowed per LAN client. If no value is entered, the Default Max Sessions value is used.
	Add - Creates a new limit entry using the above Specific Limitation values.
	Edit - To edit an existing entry, select the entry from the Limitation List, make the appropriate changes in Specific Limitation, then click Edit.
	Delete - To delete an entry, select it from the Limitation List, then click the Delete button.
Administration Message	Message to be displayed in a web browser on the LAN client when the maximum number of NAT sessions has been reached.
	Default Message - Click to reset the administration message to the factory default.
Time Schedule	Schedule Profile - Specify up to 4 time schedule entries to enable or disable the WAN.

To save changes on the page, click OK.

VII-2-2 Bandwidth Limit

To configure the Bandwidth Limit feature, from the Bandwidth Management menu, select Bandwidth Limit to bring up the configuration page.

Bandwidth Management >> Bandwidth Limit

Note:

- 1. Use "0" for TX/RX Limit for unlimited bandwidth.
- 2. Available bandwidth is calculated according to the maximum bandwidth detected or the Line Speed defined in WAN >> <u>General Setup</u> when in "According to Line Speed" Load Balance mode.
- 3. The Action and Idle Timeout settings in the Schedule Profile will be ignored.
- 4. When Bandwidth Limit is enabled, Hardware Acceleration will not work.

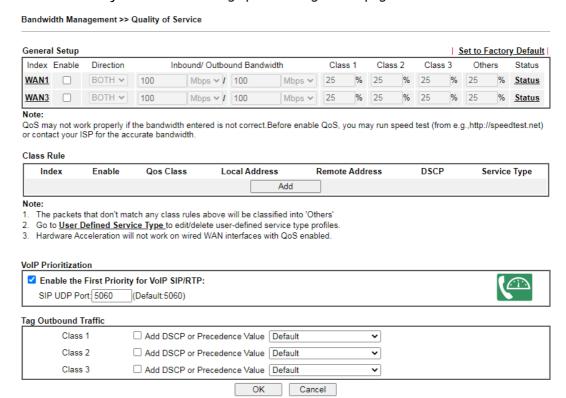

OK

Item	Description
Enable / Disable	Enable - Select to activate bandwidth limit function.
	Disable - Select to deactivate bandwidth limit function.
	IP Routed Subnet - Check this box to apply the bandwidth limit to the traffic via IP routed subnet.
	Default Limit (Per User)
	 TX LImit - Default upstream speed limit for each LAN client. Unit can be either Kbps or Mbps. Value must be between 0 (unlimited) and 30000.
	 RX limit - Default downstream speed limit for each LAN client. Unit can be either Kbps or Mbps. Value must be between 0 (unlimited and 30000).
Limitation List	Displays specific limitation entries.
Add Entry By	IP Range - All the IPs within the range defined will be restricted by bandwidth limit defined by TX Limit and RX Limit below.

	Start IP - The beginning IP address for this limit entry.
	End IP - The ending IP address for limit entry.
	IP Object - All the IPs specified by the selected IP object or IP group will be restricted by bandwith limit defined by TX Limit and RX Limit below.
	• IP Group - Specify an IP group by using the drop down list.
	IP Object - Specify an IP object by using the drop down list.
	Each - The specified bandwidth is the limit per LAN client.
	Shared - The specified bandwidth limits are the total allowed for all LAN clients within the range of IP addresses.
	 TX limit - The upstream limit. Unit can be either Kbps or Mbps. Value must be between 0 (unlimited) and 30000.
	• RX limit - The downstream limit. Unit can be either Kbps or Mbps. Value must be between 0 (unlimited) and 30000.
	Add - Creates a new limit entry using the above Specific Limitation values.
	Edit - To edit an existing entry, select the entry from the Limitation List, make the appropriate changes in Specific Limitation, then click Edit.
	Delete - To delete an entry, select it from the Limitation List, then click the Delete button.
Auto-Adjustment	Allow user to use more bandwidth ···- Select to let the router automatically adjust the upstream and downstream limits based on available bandwidth.
Smart Bandwidth Limit	This option restricts the bandwidth of LAN clients that are not in the limitation list when the network sessions exceed a predefined threshold.
	Apply the below limit to The number of sessions a LAN client is allowed to have before Smart Bandwidth Limit activates.
	 TX limit - Upstream speed limit for each LAN client. Unit can be either Kbps or Mbps. Value must be between 0 (unlimited) and 30000.
	 RX limit - Downstream speed limit for each LAN client. Unit can be either Kbps or Mbps. Value must be between 0 (unlimited and 30000).
Time Schedule	Schedule Profile - Specify up to 4 time schedule entries to enable or disable the WAN.

VII-2-3 Quality of Service

To configure Quality of Service, from the main menu, select Bandwidth Management menu, then click Quality of Service to bring up the configuration page.

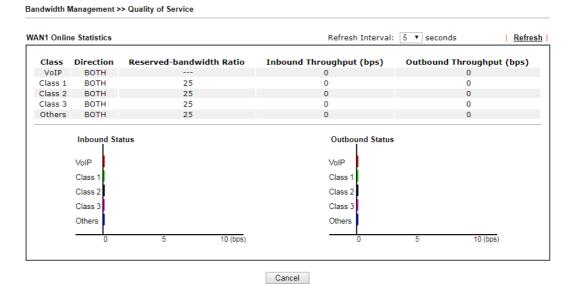

Item	Description
General Setup	 Index - Link of WAN interface. Enable - Check the box to enable the QoS function for WAN interface. If it is enabled, you can configure general QoS setting for each WAN interface. Direction -Direction of traffic to which QoS is to be applied (Inbound, Outbound, or Both). IN - Apply QoS to incoming traffic only. OUT - Apply QoS to outgoing traffic only. BOTH - Apply to both incoming and outgoing traffic. Inbound/Outbound Bandwidth - The inbound / outbound bandwidth of the WAN. Class 1 ~ 3 / Others - Percentage of bandwidth reserved for each class. Status - Click to bring up the Online Statistics page that shows snapshots of statistics for the given WAN interface.
Class Rule	Define and list the Class rules. Index - Displays the class number that you can edit. Enable - Displays the status of this class rule. QoS Class - Displays the QoS class level. Local Address - Displays the local IP address for the rule.

	Remote Address - Displays the remote IP address for the rule. DSCP - Displays the levels of the data for processing with QoS control. Service Type - Displays detailed settings for the service type. Add - Click it to create a class rule for QoS.
VoIP Prioritization	Enable the First Priority for VoIP SIP/RTP - Select to allow VoIP traffic to receive the highest priority. SIP UDP Port - Port number to be monitored for SIP traffic. - Click this icon to display the VoIP QoS Status.
Tag Outbound Traffic	Tag the outgoing traffic with the DSCP or Precedence value. Add DSCP or Precedence Value for Class 1 to Class 3 - Check to apply the DSCP or precedence value for each class.

To save changes, click OK; to discard changes, click Cancel.

Online Statistics

Click the Status link in the General Setup section to show real-time online statistics of the WAN interface.

General Setup for WAN Interface

Click WAN interface number link to configure the limited bandwidth ratio for QoS of the WAN interface.

Bandwidth Management >> Quality of Service >> WAN1

Enable UDP Bandwidth Control
Limited_bandwidth Ratio 25 %

Outbound TCP ACK Prioritize

Cancel

OK

Available settings are explained as follows:

Item	Description
Enable UDP Bandwidth Control	Select to restrict the bandwidth available to UDP traffic. The Limited_bandwidth Ratio value is the maximum percentage of bandwidth that can be used by UDP traffic. • Limited_bandwidth Ratio - Enter a percentage value.
Outbound TCP ACK Prioritize	Select to give outbound ACK packets priority over other packets to ensure traffic is not slowed down because the remote host is waiting for ACK packets before further traffic will be sent.

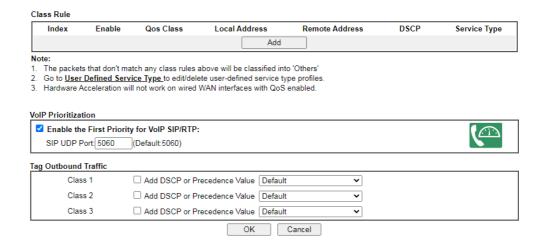

Info

The rate of outbound/inbound must be smaller than the real bandwidth to ensure correct calculation of QoS. It is suggested to set the bandwidth value for inbound/outbound as 80% - 85% of physical network speed provided by ISP to maximize the QoS performance.

Add / edit a Class Rule for QoS

You can set up to 20 rules for one Class. If you want to edit an existed rule, please select the radio button of that one and click Edit to open the rule edit page for modification.

 To add a rule, click Add to bring up the configuration page. To edit an existing rule, select the rule by clicking the radio button in front of the rule, and then click Edit to bring up the configuration page.

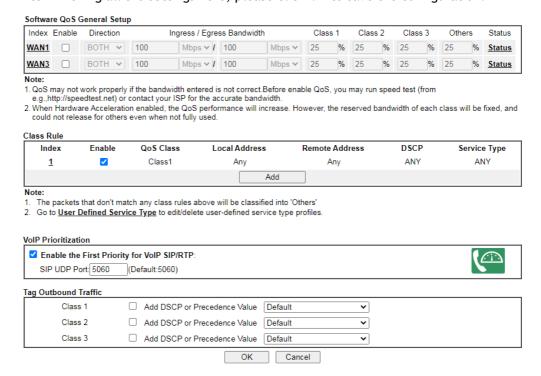

2. For adding a new rule, click Add to open the following page.

Rule 1		
✓ Enable		
IP Version	● IPv4 ○ IPv6	
Local IP Address	Any Edit	
Remote IP Address	Any Edit	
DiffServ CodePoint	ANY	
Service Type	Predefined	
QoS Class	Class 1 ▼	
	OK Delete Cancel	

Item	Description	
Enable	Select to enable this rule.	
IP Version	Protocol (IPv4 or IPv6) to which this rule applies.	
Local IP Address	Click the Edit button to set the local (LAN) IP address or address range for the rule.	
DiffServ CodePoint	DSCP or ToS precedence of packets to which this rule applies.	
Remote IP Address	Click the Edit button to set the remote (WAN) IP address or address range for the rule.	
	● 192.168.1.1/doc/QosipEdt.htm - Google Chrome	
	▲ 不安全 192.168.1.1/doc/QosIpEdt.htm	
	Ethernet Type: IPv4	
	Address Type Any Address Start IP Address 0.0.0.0	
	End IP Address 0.0.0.0	
	Subnet Mask	
	OK Close	
	Address Type - Type of address: Any Address, Single Address, Range Address, Subnet Address.	
	Single Address - Specify IP address.	
	 Range Address - Specify Start IP Address and End IP Address. 	
	 Subnet Address - Specify Start IP Address and Subnet Mask. 	
Service Type	Service Type to which this rule applies.	
	Service is a predefined or user-defined type of traffic that uses certain protocols or ports. To set up a custom service, select User Defined to set the service name, the protocol, and port number.	
QoS Class	Specify the QoS class (1, 2 or 3) for this rule.	

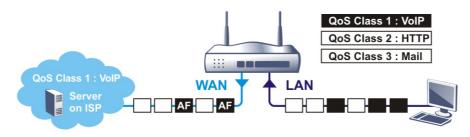

3. After finishing all the settings here, please click OK to save the configuration.

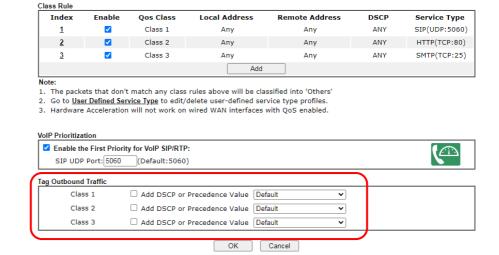

Retag the Packets for Identification

Packets originating from the LAN that are destined for the WAN can have the DS flag changed to a different value by enabling Tag Packet and specifying the DSCP or IP Precedence value.

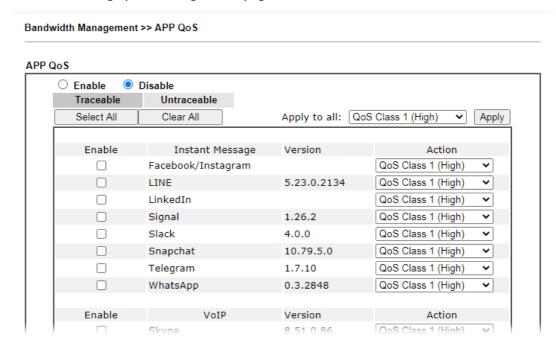

In the following illustration, outbound VoIP packets from the LAN arrive at the Vigor router with the QoS value unset. The router sets the DSCP value to AF before forwarding them to the ISP server via the WAN interface.

VII-2-4 APP QoS

To configure APP QoS, from the main menu, select Bandwidth Management menu, then click APP QoS to bring up the configuration page.

Available settings are explained as follows:

Item	Description
Enable/Disable	Enables or disables the APP QoS feature.
Traceable	Traceable applications are those whose traffic can be 100% traced.
	All protocols under this tab can have a specific QoS class assigned.
	Enable - Select to enable OoS for the application.
	Apply to all - Select a QoS class to be applied to all protocols. You can override the QoS class for specific protocols using the Action dropdown listbox.
Untraceable	Untraceable applications are detected when they attempt to establish connections to remote hosts, and all traffic between the remote hosts and the local network will be placed under QoS, within the same QoS class.
	All protocols under this tab can have a specific QoS class assigned.
	Enable - Select to enable OoS for the application.
	Action - Select a QoS class to be applied to all applications.
Select All	Click to select all Enabled checkboxes.
Clear All	Click to deselect all Enabled checkboxes.

After changes have been made, click OK to save changes, or Cancel to discard.

VII-3 User Management

User Management allows the network administrator to manage Internet access at the user level. After a user has been authenticated by means of a username and password, he or she can be granted Internet access, and optional firewall rules and WAN access policies can be applied.

Info

In general, filter rules configured in the Firewall apply globally. However, in user management, the filter rules can be selectively applied to user profiles.

Web User Interface

User Management General Setup User Profile User Group User Online Status

VII-3-1 General Setup

User Management >> General Setup

Global settings for User Management can be configured in this section.

OK

Mode Selection:

Rule-Based is a management method based on IP address. Administrator may set different firewall rules to different IP address.

User-Based is a management method based on user profiles. Administrator may set different firewall rules to different user profiles.

Item	Description
Mode Selection	The User Management Mode.
	User-Based - Router applies filter rules configured in User Management>>User Profile.
	Rule-Based - Router applies filter rules configured in Firewall>>General Setup and Filter Rule.
Authentication page	Web Authentication - Web protocol for the web authentication page.
	HTTP - Web page will be unencrypted.
	HTTPS - Web page will be encrypted.
	Login Page Greeting - Click to be redirected to System Maintenance >> Login Page Greeting, where you can configure the message that is shown to the user after a

	successful login.
	Display IP Address on tracking window - Select to display the IP address of the client on the tracking window.
Landing Page	HTML code to be shown on the Login Page Greeting.

 $\operatorname{\sf Click}\nolimits\operatorname{\sf OK}\nolimits$ to save changes, $\operatorname{\sf Clear}\nolimits$ to restore settings to factory defaults, or Cancel to discard changes.

VII-3-2 User Profile

This page allows you to create up to 200 user profiles for use with User Management.

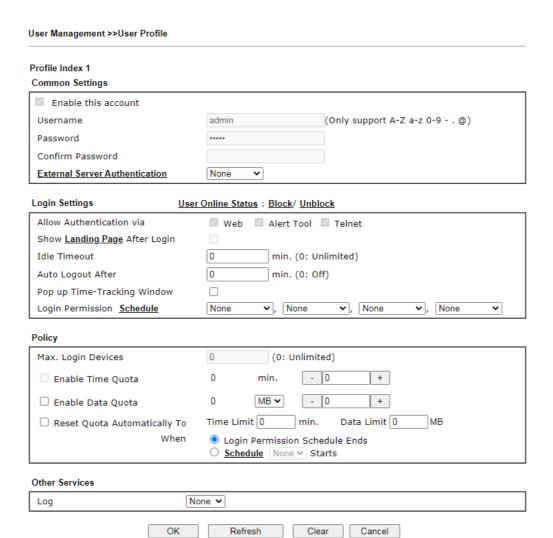

Select User Management>>User Profile from the menu bar, then click a profile number to configure.

- admin: To change the administrator password, please go to System Maintenance >> Administrator Password.
- 2. Dial-In User Profile: Dial-In User Profile is reserved for VPN authentication.
- 3. During authentication, Router will check all the local user profiles first, and then the profiles in external servers.

Profiles 1 (admin) and 2 (Dial-In User) are reserved profiles. The admin profile applies to the router administrator login, while the Dial-in User profile applies to all VPN dial-in users.

Item	Description		
Common Settings			
Enable this account	Select to enable this user profile.		
Username	Login name (e.g., LAN_User_Group_1, WLAN_User_Group_A, WLAN_User_Group_B, etc.) for this user profile. Maximum length is 24 characters.		
Password	Password (e.g., <i>Iug123</i> , <i>wug123</i> , <i>wug456</i> , etc.) for this user profile. Maximum length is 24 characters. When a user tries to access the Internet and User Management is enabled, he or she must supply a valid user		
	name and password combination for authentication. The profile with matching user name and password will be applied to the session.		
Confirm Password	Enter the password again for confirmation.		
External Server Authentication	The router will authenticate dial-in users using either a built-in (None) or external service (LDAP, Radius or TACACS+). The Password setting is ignored when an external authentication service is used.		
Login Settings			
Allow Authentication via	The authentication methods allowed for this user.		

	Web - If selected, user will need to authenticate by entering a username and password when attempting to access an external website for the first time. The user will be redirected to the external website after a successful authentication. Alert Tool - If selected, the user can enter the user name and password into the DrayTek Alert Tool. A window with remaining time of connection for such user will be displayed. The Alter Tool can be downloaded from the DrayTek website. Telnet - If selected, the user can authenticate by logging in to the router using telnet.		
Show Landing Page After Login	When a user tries to access into the web user interface of Vigor router series with the user name and password specified in this profile, he/she will be lead into the web page configured in Landing Page field in User Management>>General Setup. Check this box to enable such function.		
Idle Timeout	If there is no WAN traffic to and from the LAN client for the specified amount of time (in minutes), the WAN session is reset and the user will need to re-authenticate before Internet access is once again allowed. The default Idle Timeout value is 10 minutes.		
Auto Logout After	Such account will be forced to logout after a certain time set here.		
Pop up Time-Tracking Window	If enabled, a browser window will pop up showing the session time remaining. However, the system will update the time periodically to keep the connection always on. Thus, Idle Timeout will not interrupt the network connection.		
Login Permission Schedule	You can enter four sets of time schedule for your request. All the schedules can be set previously in Applications >> Schedule web page and you can use the number that you have set in that web page.		
Policy			
Max. Login Devices	The maximum number of concurrent logins allowed for this profile. The default setting is 0 which means no limit.		
Enable Time Quota	If selected, the user is allowed Internet access for the specified amount of time after a successful authentication. The first value is the remaining time of the current login session, whereas the second value is the value to increment or decrement from the remaining time quota by clicking + /-buttons. Both values are in minutes. Click + / - to increase / decrease the time quota for such profile. Note: A dialog will be popped up showing the remaining time remained when the user after the user has successfully authenticated. Internet Access Michael, you are now connected. Time remaining online: 00:32:41 Time used: 01:12:54. Logout		

	When the time is up, all Internet connections are terminated.
Enable Data Quota	If selected, the user is allowed to use the specified amount of data after a successful authentication.
	The first value is the remaining data quota of the current login session, whereas the second value is the value to increment or decrement from the remaining data quota by clicking +/ - buttons. The unit for both values can be set to either MB (megabytes) or GB (gigabytes) using the MB/GB dropdown box.
	Click + / - to increase / decrease the data quota for such profile.
Reset quota automatically	Select to enable this option.
	Reset the time and data quotas to the preset default values when a time schedule ends.
	Time Limit - Enter value for default time quota.
	Data Limit - Enter value for default data quota.
	Login Permission Schedule Ends - When the scheduling time is up, the router will reset the quota with user-defined time/data values automatically.
	<u>Schedule</u> - Specify a time schedule index number for this profile.
Other Services	
Log	Activities of the user can be recorded by Syslog.
	None - Logging is disabled.
	Login - Login and logout activities are logged.
	Event - Allowed and blocked traffic are logged.
	AII - Both Login and Event types are logged.

Click OK to save changes, Clear to restore settings to factory defaults, or Cancel to discard changes. Click Refresh to reload the page with the most recent data usage information (data and time quotas).

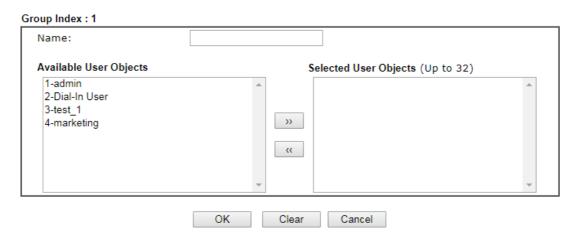

VII-3-3 User Group

This page allows you to place multiple user profiles into groups. These groups can be used to set up filter rules in Firewall>>General Setup.

Click an index number link to its setup page:

User Management >> User Group

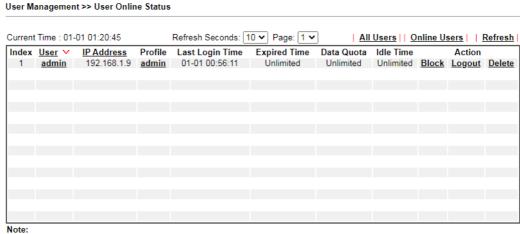

Item	Description
Name	Name that identifies this user group.
Available User Objects	Shows a list of User Objects that have not been placed into the current group.

»	Click >> to move selected user objects in the Available User Objects on the left to the Selected User Objects on the right, thus adding them to the current group.	
((Click << to move selected user objects in the Selected User Objects on the right to the Available User Objects on the left, thus removing them from the current group.	
Selected Keyword Objects	Shows a list of User Objects that have been placed into the current group.	

To save changes on the page, click OK. To discard changes, click Cancel. To remove all user objects from the current group, click Clear.

VII-3-4 User Online Status

This page displays the users that are currently logged into the router. The list refreshes periodically to show the most up-to-date information.

- Please click "IP Address" to view all online users.
- 2. Dial-in User profiles are linked to VPN clients and therefore cannot be logged-out or deleted while connecting.

Total Number : 1

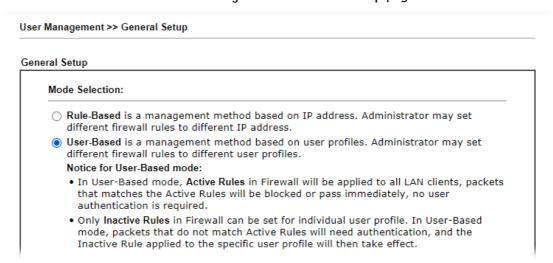

Item	Description	
Refresh Seconds	The time interval between automatic screen refreshes, in seconds. Select one of 10, 15 and 30 seconds.	
Refresh	Click to manually refresh the displayed data.	
Index	Index of the user entry.	
User	The name of the user that is logged on. Clicking this will bring up the following page which allows setting time and data quotas of the user. For details, refer to the description on the Enable Time Quota and Enable Data Quota items in the User Profile section.	
IP Address	IP LAN address of the device that initiated the login.	
Profile	Name of the user profile. If the logged-in user is a VPN user, Dial-in User will be displayed. Otherwise it will be the same as User.	

Last Login Time	The most recent login time of the user.		
Expired Time	The expiration time of the current login session.		
Data Quota	Display the quota for data transmission. The remaining data quota of this login session.		
Idle Time	Amount of time the session has been idled.		
Action	Block - Stops user from accessing the Internet. Unblock -Resumes Internet access of a blocked user. Logout - Terminates the current login session. Delete - Removes the user entry from the User Online Status page.		

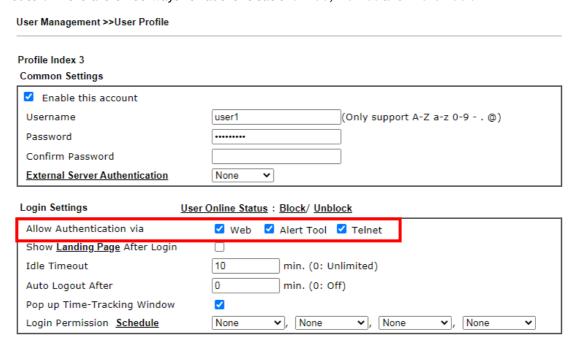

Application Notes

A-1 How to authenticate clients via User Management

Before using the function of User Management, please make sure User-Based has been selected as the Mode in the User Management>>General Setup page.

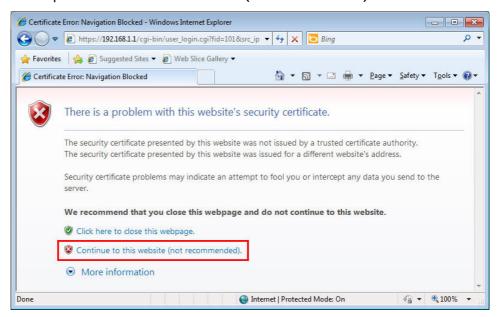

With User Management authentication function, before a valid username and password have been correctly supplied, a particular client will not be allowed to access Internet through the router. There are three ways for authentication: Web, Telnet and Alert Tool.

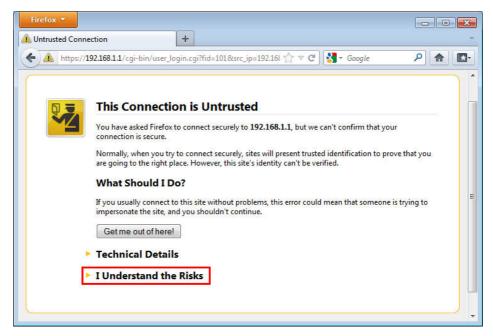

Authentication via Web

If a LAN client who hasn't passed the authentication opens an external web site in his browser, he will be redirected to the router's Web authentication interface first. Then, the client is trying to access http://www.draytek.com and but brought to the Vigor router. Since this is an SSL connection, some web browsers will display warning messages.

With Microsoft Internet Explorer, you may get the following warning message.
 Please press Continue to this website (not recommended).

 With Mozilla Firefox, you may get the following warning message. Select I Understand the Risks.

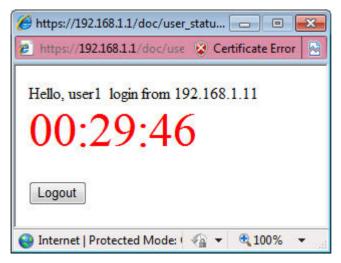

• With Chrome browser, you may get the following warning. Click Proceed anyway.

After that, the web authentication window will appear. Input the user name and the password for your account (defined in User Management) and click Login.

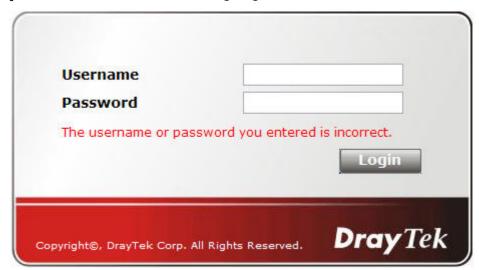

If the authentication is successful, the client will be redirected to the original web site that he tried to access. In this example, it is http://www.draytek.com . Furthermore, you will get a popped up window as the following. Then you can access the Internet.

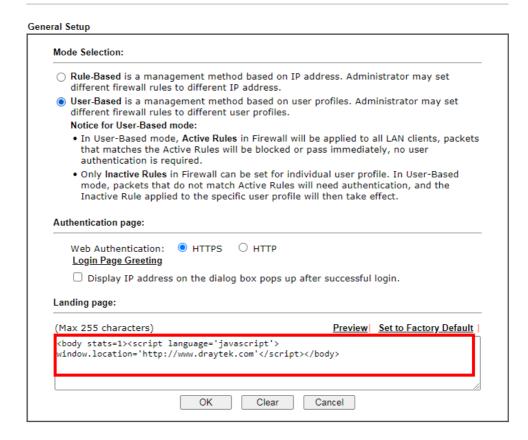

Note, if you block the web browser to pop up any window, you will not see such window.

If the authentication is failed, you will get the error message, The username or password you entered is incorrect. Please login again.

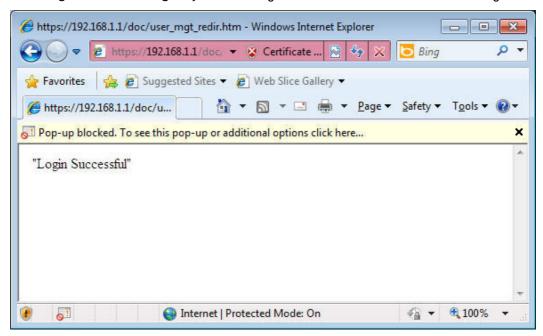

■ In above description, you access an external web site to trigger the authentication. You may also directly access the router's Web UI for authentication. Both HTTP and HTTPS are supported, for example http://192.168.1.1 or https://192.168.1.1 . Replace 192.168.1.1 with your router's real IP address, and add the port number if the default management port has been modified.

If the authentication is successful, you will get the Welcome Message that is set in the User Management >> General Setup page.

With the default setup <body stats=1><script language='javascript'> window.location='http://www.draytek.com'</script></body>, you will be redirected to http://www.draytek.com . You may change it if you want. For example, you will get the following welcome message if you enter Login Successful in the Welcome Message table.

Also you will get a Tracking Window if you don't block the pop-up window.

Don't setup a user profile in User Management and a VPN Remote Dial-in user profile with the same Username. Otherwise, you may get unexpected result. It is because the VPN Remote Dial-in User profiles can be extended to the User profiles in User Management for authentication. There are two different behaviors when a User Management account and a VPN profile share the same Username:

• If SSL Tunnel or SSL Web Proxy is enabled in the VPN profile, the user profile in User Management will always be invalid for Web authentication. For example, if you create a user profile in User Management with chaochen/test as username/password, while a VPN Remote Dial-in user profile with the same username "chaochen" but a different password "1234", you will always get error message The username or password you entered is incorrect when you use chaochen/test via Web to do authentication.

VPN and Remote Access >> Remote Dial-in L	Jser			
Index No. 1				
User account and Authentication	Us	sername		???
☐ Enable this account	1	assword		Max: 19 characters
Idle Timeout 300 seco	ond(s)	☐ Enable Mobile One-Time		e Passwords(mOTP)
Allowed Dial-In Type		PIN Code		
□ РРТР		Secret		
✓ IPsec Tunnel	-			
✓ IKEv1/IKEv2 ✓ IKEv2 EAP ✓ IP.	sec XAuth		cation Method	
☑ L2TP with IPsec Policy None ✓	1 II —	Pre-Shar		
SSL Tunnel		KE Pre-Sha		Max: 64 characters
OpenVPN Tunnel	11 —		gnature(X.509	9)
☐ Specify Remote Node	N	lone 🗸		
Remote Client IP	IP	sec Securit	v Method	
		Medium(•	
or Peer ID	Hi	igh(ESP)	DES 2	BDES AES
Netbios Naming Packet • Pass •	Block Lo	ocal ID (op	tional)	
Multicast via VPN O Pass O	Block			
(for some IGMP,IP-Camera,DHCP Relay.	etc.)			
Subnet				
LAN 1 🗸				
Assign Static IP Address				
0.0.0.0				

• If SSL Tunnel or SSL Web Proxy is disabled in the VPN profile, a User Management account and a remote dial-in VPN profile can use the same Username, even with different passwords. However, we recommend you to use different usernames for different user profiles in User Management and VPN profiles.

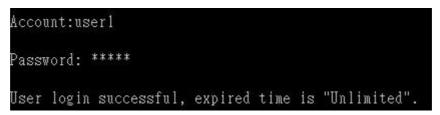

Authentication via Telnet

The LAN clients can also authenticate their accounts via telnet.

 Telnet to the router's LAN IP address and input the account name for the authentication:

2. Enter the password for authentication and press Enter. The message User login successful will be displayed with the expired time (if configured).

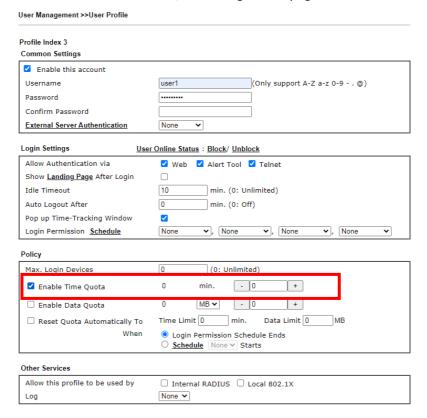

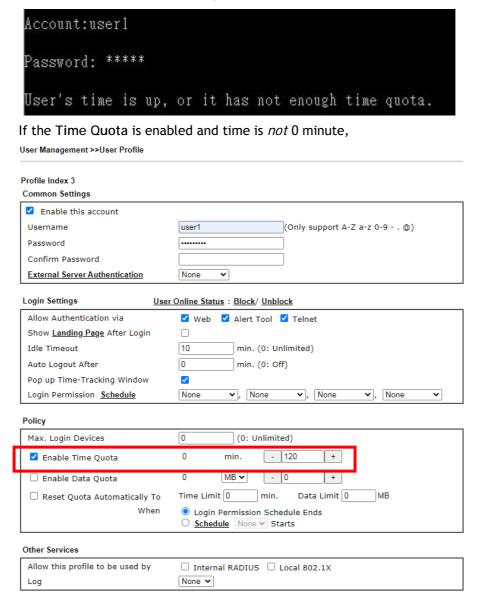

Info

Here expired time is "Unlimited" means the Time Quota function is not enabled for this account. After login, this account will not be expired until it is logout.

3. In the Web interface of router, the configuration page of Time Quota is shown as below.

4. If the Time Quota is set with "0" minute, you will get the following message which means this account has no time quota.

You will get the following message. The expired time is shown after you login.

```
Account:user1
Password: *****
User login successful, expired time is "12-23 10:21:33".
```

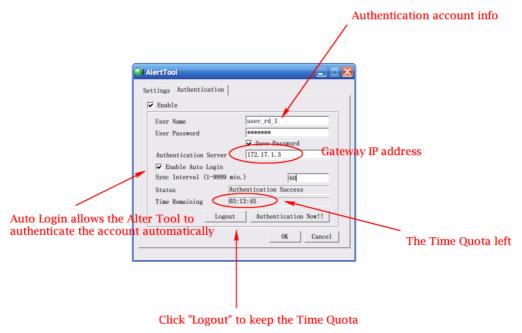

After you run out the available time, you can't use this account any more until the administrator manually adds additional time for you.

Authentication via VigorPro Alert Notice Tool

Authentication via Web or Telnet is convenient for users; however, it has some limitations. The most advantage with VigorPro Alert Notice Tool to operate the authentication is the ability to do auto login. If the timeout value set on the router for the user account has been reached, the router will stop the client computer from accessing the Internet until it does an authentication again. Authentication via VigorPro Alert Notice Tool allows user to setup the re-authentication interval so that the utility will send authentication requests periodically. This will keep the client hosts from having to manually authenticate again and again.

The configuration of the VigorPro Alert Notice Tool is as follows:

1. Click Authenticate Now!! to start the authentication immediately.

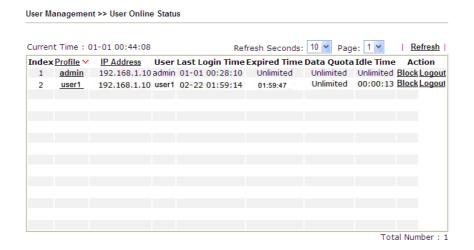

2. You may get the VigorPro Alert Notice Tool from the following link: http://www.draytek.com/user/SupportDLUtility.php

Info 1

Any modification to the Firewall policy will break down the connections of all current users. They all have to authenticate again for Internet access.

Info 2 The administrator may check the current users from User Online Status page.

A-2 How to use Landing Page Feature

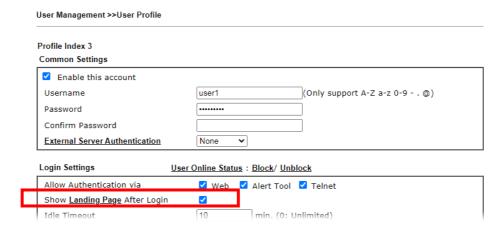

Landing Page is a special feature configured under User Management. It can specify the message, content to be seen or specify which website to be accessed into when users try to access into the Internet by passing the authentication. Here, we take Vigor2135 series router as an example.

Example 1: Users can see the message for landing page after logging into Internet successfully

- 1. Open the web user interface of Vigor2135.
- 2. Open User Management -> General Setup to get the following page. In the field of Landing Page, please Enter the words of "Login Success". Please note that the maximum number of characters to be typed here is 255.
- 3. Now you can enable the Landing Page function. Open User Management -> User Profile and click one of the index number (e.g., index number 3) links.

4. In the following page, check the box of Landing page and click OK to save the settings.

5. Open any browser (e.g., FireFox, Internet Explorer). The logging page will appear and asks for username and password. Please Enter the correct username and password.

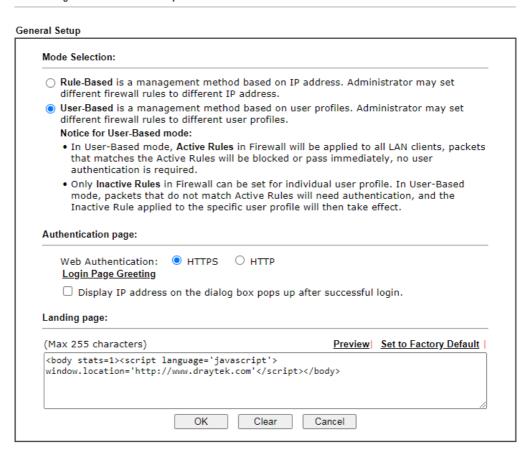

6. Click Login. If the logging is successful, you will see the message of Login Success from the browser you use.

Example 2: The system will connect to http://www.draytek.com automatically after logging into Internet successfully

- 1. In the field of Landing Page, please Enter the words as below:
 - " <body stats=1><script language='javascript'>
 window.location='http://www.draytek.com'</script></body>"

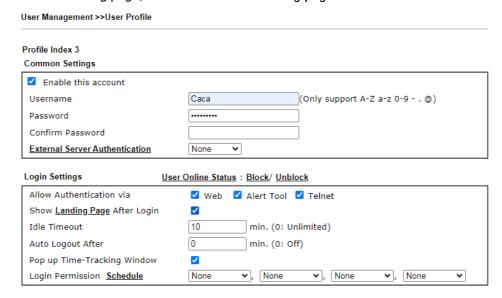

User Management >> General Setup

2. Next, enable the Landing Page function. Open User Management -> User Profile and click one of the index number (e.g., index number 3) links.

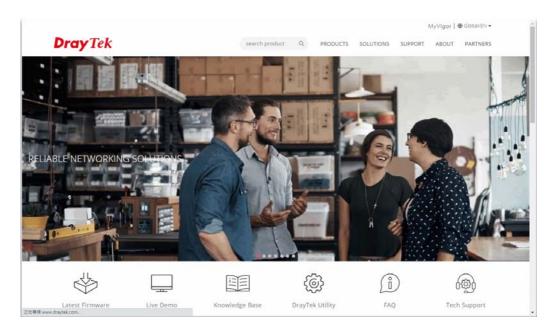

3. In the following page, check the box of Landing page and click OK to save the settings.

4. Open any browser (e.g., FireFox, Internet Explorer). The logging page will appear and asks for username and password. Please Enter the correct username and password.

5. Click Login. If the logging is successful, you will be directed into the website of www.draytek.com.

VII-4 Hotspot Web Portal

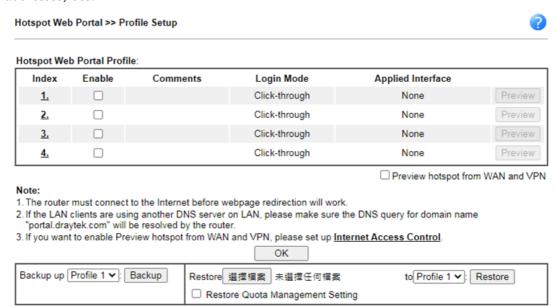

The Hotspot Web Portal feature allows you to set up profiles so that LAN users could either be redirected to specific URLs, or be shown messages when they first connect to the Internet through the router. Users could be required to read and agree to terms and conditions, or authenticate themselves, prior to gaining access to the Internet. Other potential uses include the serving of advertisements and promotional materials, and broadcast of public service announcements.

Web User Interface

Hotspot Web Portal
Profile Setup
Quota Management

VII-4-1 Profile Setup

Select Profile Setup to create or modify Portal profiles. Up to 4 profiles can be created to meet different requirements according to LAN subnets, WLAN SSIDs, origin and destination IP addresses, etc.

Item	Description
Index	Click the index number link to view or update the profile settings.
Enable	Check the box to enable the profile.
Comments	Shows the description of the profile.
Login Mode	Shows the login mode used by the profile. See the section

	Login Mode for details.		
Applied Interface	Shows the interfaces to which this profile applies.		
Preview	Click this button to preview the Hotspot Web Portal page that will be displayed to users.		
Backup up	Profile list - Select a source profile.		
	Backup - Click to save the configuration file based on the selected source profile.		
Restore	Select - Click to choose a configuration file.		
	to Select a destination profile. It will be restored by the selected configuration file.		
	Restore - Click to perform the restoration job.		
	Restore Quota Management Setting - If selected, the quota management setting also will be restored onto the destination profile.		

VII-4-1-1 Login Method

There are four login methods to choose from for authenticating network clients: Skip Login, Click Through, Social Login, PIN Login, and Social or PIN Login. Each login mode will present a different web page to users when they connect to the network.

(A) Skip Login, landing page only

This mode does not perform any authentication. The user will be redirected to the landing page. The user can then leave the landing page to visit other websites.

(B) Click-through

The following page will be shown to the users when they first attempt to access the Internet through the router. After clicking Accept on the page, users will be directed to the landing page (defined in Captive Portal URL) and be granted access to the Internet.

(C) Various Hotspot Login

An authentication page will appear when users attempt to access the Internet for the first time via the router. After authenticating themselves using a Facebook account, Google account, PIN code, password for RADIUS sever, they will be directed to the landing page and be granted access to the Internet.

(D) External Portal Server

External RADIUS server will authenticate the users when they attempt to access the Internet for the first time via the router.

VII-4-1-2 Steps for Configuring a Web Portal Profile

Click the index link (e.g., #1) of the selected profile to display the following page.

Redirection URL	Enter the URL to which the client will be redirected.
RADIUS Server	Authentication Method - To configure the RADIUS server, click the External RADIUS Server link and you will be presented with the configuration page.
	RADIUS MAC Authentication - If the RADIUS server supports authentication by MAC address, enable RADIUS MAC Authentication and select the MAC address format that is used by
	the RADIUS server. MAC Address Format - Select the MAC address format.
	1.5.10 Addi 055 Format Select the mine addi 055 format.

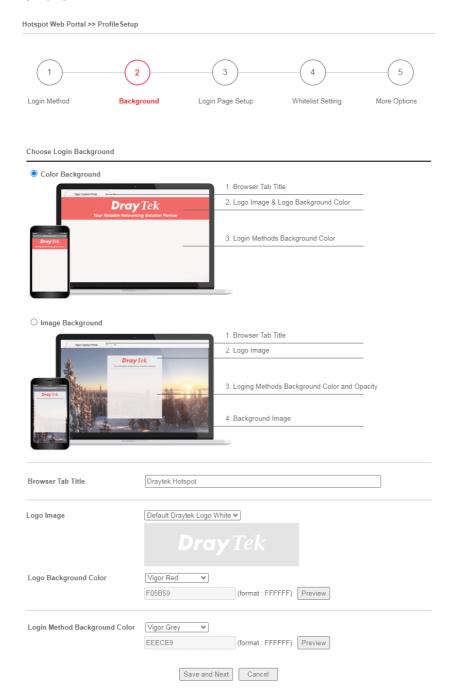

Save and Next	Click to save the configuration on this page and proceed to the next page.
Cancel	Click to save the configuration on this page and proceed to the next page.

If you have chosen Skip Login, landing page only or External Portal Server as the portal method, skip to step 4 Whitelisting below.

Otherwise, proceed to configure the login page by following steps 2 and 3.

If you have selected a Login Mode that requires authentication, select a background for the login page.

Item	Description
Choose Login Background	Select either Color Background or Image Background as the login page background scheme.
Browser Tab Title	Enter the text to be shown as the webpage title in the browser.
Logo Image	The DrayTek Logo will be displayed by default. However, you can

1	
	enter HTML text or upload an image to replace the default logo.
Login Method Background Color	Select the background color of the login panel from the predefined color list, or select Customize Color and enter the RGB value. Click Preview to preview the selected color. Vigor Grey None Customize Color Vigor Red Vigor Grey Vigor Grey Vigor Grey Vigor Grey Vigor Grey Vigor Green
Opacity (10 ~ 100)	Available when Image Background is selected. Set the opacity of the background image.
Background Image	Available when Image Background is selected. Click Browse to select an image file (.JPG or .PNG format), then click Upload to upload it to the router.
Save and Next	Click to save the configuration on this page and proceed to the next page.
Cancel	Click to abort the configuration process and return to the profile summary page.

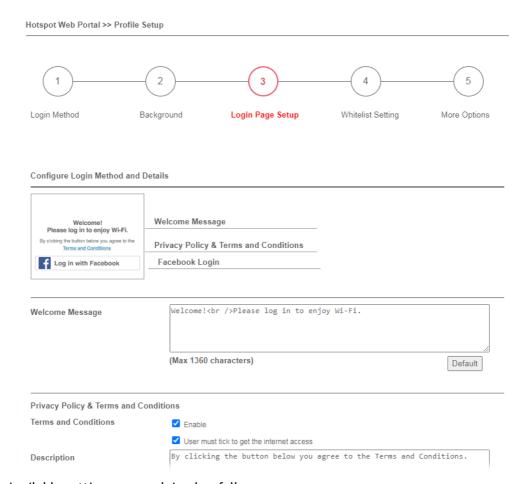

If you have selected Skip Login, landing page only or External Portal Server as the portal method, proceed to Step 4 *Whitelist Setting*; otherwise, continue to Step 3 *Login Page Setup*.

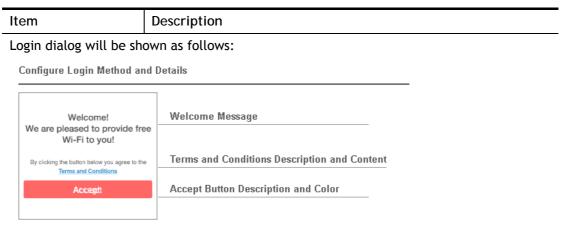

In this step you can configure settings for the login page.

Click Through

This section describes the Login Page setup if you have selected Click Through as the Login Method.

Available settings are explained as follows:

However, when PIN with Voucher is selected as the login method, Login dialog will be shown as follows:

Welcome! Please log in to enjoy Wi-Fi. By clicking the button below you agree to the Terms and Conditions Or log in with PIN code. Welcome Message Terms and Conditions Description and Content Hint Message for PIN

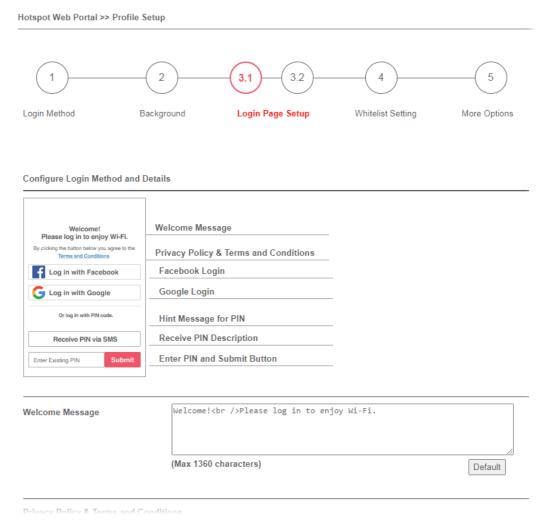

Enter Existing PIN

Enter PIN and Submit Button

Welcome Message	Enter the text to be displayed as the welcome message.
Terms and Conditions Description	Enter the text to be displayed as the Terms and Conditions hyperlink text.
Terms and Conditions Content	Enter the text to be displayed in the Terms and Conditions pop-up window.
Hint Message for PIN	Enter a message to remind the PIN code.
Enter PIN Description	Enter the existing PIN code.
Submit Button Description	Enter the text to be displayed on the Submit button
Submit Button Color	Select the color of the Submit button from the predefined color list, or select Customize Color and enter the RGB value. Click Preview to preview the selected color.
Accept Button Description	Enter the text to be displayed on the accept button
Accept Button Color	Select the color of the accept button from the predefined color list, or select Customize Color and enter the RGB value. Click Preview to preview the selected color.
Save and Next	Click to save the configuration on this page and proceed to the next page.
Cancel	Click to abort the configuration process and return to the profile summary page.

Various Hotspot Login

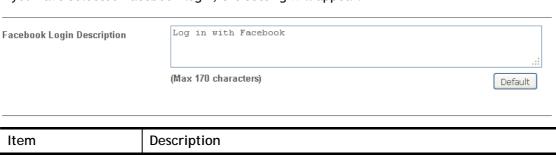

This section describes the Login Page setup step if you have selected Various Hotspot Login the login method. You will see only settings that are relevant to the selected login method(s).

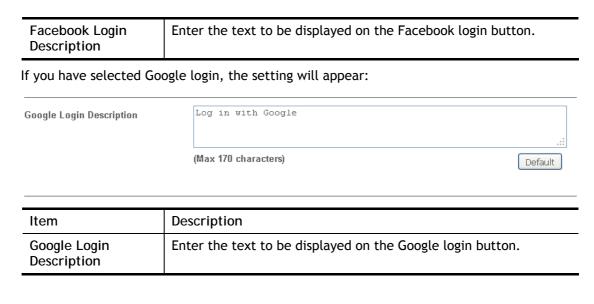

Settings that are common to Facebook, Google, PIN, and RADIUS authentication are:

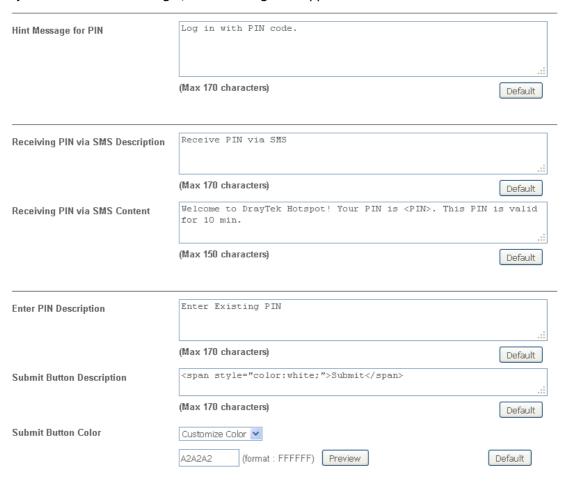

Item	Description
Welcome Message	Enter the text to be displayed as the welcome message.
Terms and Conditions Description	Enter the text to be displayed as the Terms and Conditions hyperlink text.
Terms and Conditions Content	Enter the text to be displayed in the Terms and Conditions pop-up window.

If you have selected Facebook login, the setting will appear:

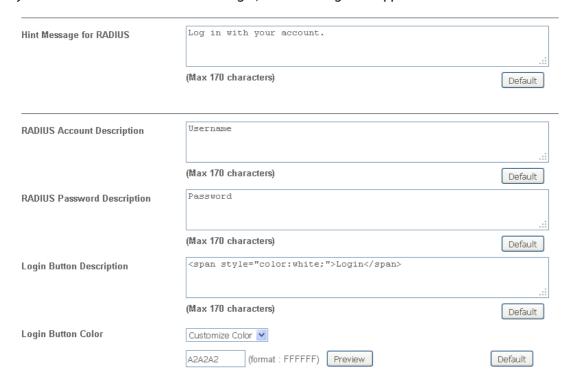

If you have selected PIN login, these settings will appear:

Item	Description
Hint Message for PIN	Enter the text used to suggest users to choose SMS authentication.
Receiving PIN via SMS Description	Enter the text to be displayed on the button that the user clicks to receive an SMS PIN.
Receiving PIN via SMS Content	Enter the message to be sent by SMS to inform the user of the PIN. The PIN variable is specified by <pin> within the message.</pin>

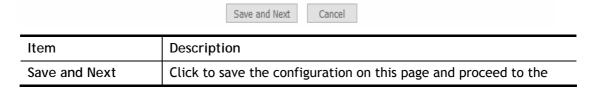

Enter PIN Description	Enter message to be displayed in the PIN textbox to prompt the user to enter the PIN.
Submit Button Description	Enter the text to be displayed on the submit PIN button
Submit Button Color	Select the color of the submit button from the predefined color list, or select Customize Color and enter the RGB value. Click Preview to preview the selected color.

If you have selected RADIUS account login, these settings will appear:

Item	Description
Hint Message for RADIUS	Enter the text used to prompt the user to login.
RADIUS Account Description	Enter the text to prompt the user to enter the username.
RADIUS Password Description	Enter the text to prompt the user to enter the password.
Login Button Description	Enter the text to be displayed on the login button.
Login Button Color	Select the color of the login button from the predefined color list, or select Customize Color and enter the RGB value. Click Preview to preview the selected color.

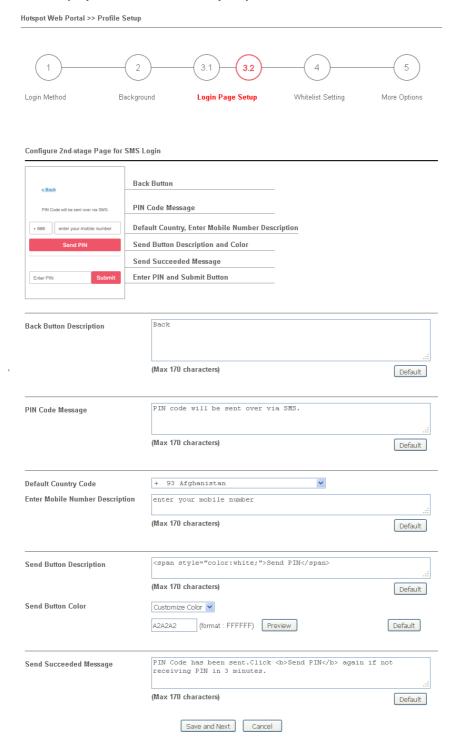

And finally, the save and cancel buttons are always displayed.

	next page.
Cancel	Click to abort the configuration process and return to the profile summary page.

2nd-stage Page for PIN Login

If you have selected PIN Login as the login method, you will also need to configure the page that is displayed to users when they request a PIN.

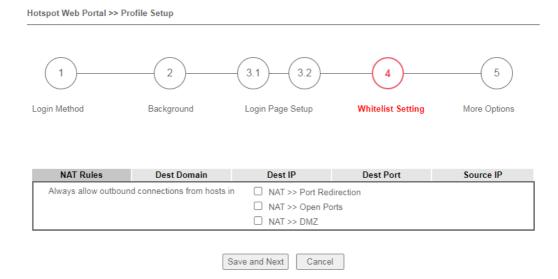

Item

Back Button Description	Enter text for the label of the hyperlink to return to the previous page.
PIN Code Message	Enter text to be displayed as the body text on the page.
Default Country Code	Select the default country code to be displayed using the dropdown menu.
Enter Mobile Number Description	Enter message to be displayed in the mobile number textbox to prompt the user to enter the mobile number.
Send Button Description	Enter the label text of the send button.
Send Button Color	Select the color of the send button from the predefined color list, or select Customize Color and enter the RGB value. Click Preview to preview the selected color.
Send Succeeded Message	Enter text to be displayed to notify the user after the PIN has been sent.
Save and Next	Click to save the configuration on this page and proceed to the next page.
Cancel	Click to abort the configuration process and return to the profile summary page.

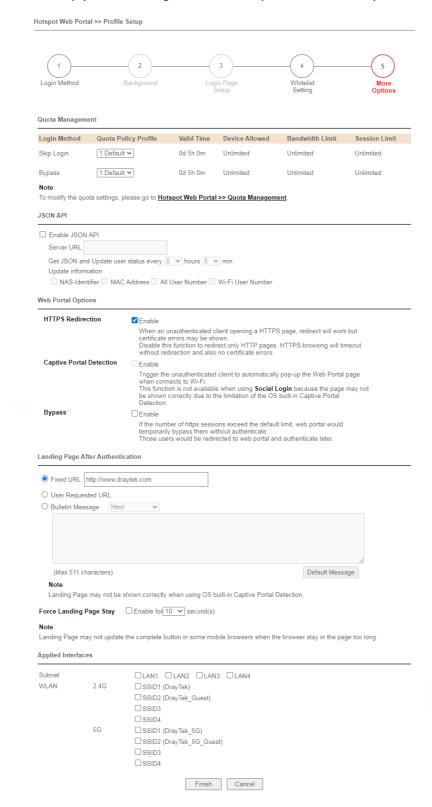

In this step you can configure the whitelist settings. Users are allowed to send and receive traffic that satisfies whitelist settings.

Item	Description
NAT Rules	To prevent web portal settings from conflicting with NAT rules resulting in unexpected behavior, select the NAT rules that are allowed to bypass the web portal. Hosts listed in selected NAT rules can always access the Internet without being intercepted by the web portal.
Dest Domain	Enter up to 30 destination domains that are allowed to be accessed.
Dest IP	Enter up to 30 destination IP addresses that are allowed to be accessed.
Dest Port	Enter up to 30 destination protocols and ports that are allowed through the router.
Source IP	Enter up to 30 source IP addresses that are allowed through the router.
Save and Next	Click to save the configuration on this page and proceed to the next page.
Cancel	Click to abort the configuration process and return to the profile summary page.

In this step you can configure advanced options for the Hotspot Web Portal.

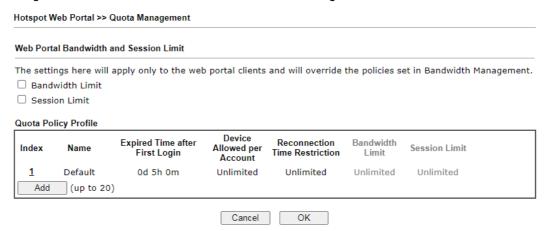

Item	Description
------	-------------

Quota Management			
Quota Policy Profile	Choose a policy profile to apply to web portal clients.		
JSON API			
Enable JSON API	Select to enable the function.		
	Server URL - Enter the URL of the server.		
Web Portal Options			
HTTPS Redirection	If this option is selected, unauthenticated clients accessing HTTPS websites will be redirected to the login page, but the browser may alert the user of certificate errors. If this option is not selected, attempts to access to HTTPS website will time out without redirection.		
Captive Portal Detection	If this option is selected, the web portal page is triggered automatically when an unauthenticated client tries to access the Internet. This function is not available when the Login Mode is Social Login, as the web portal page may not be shown correctly due to the limitations of the operating system's built-in Captive Portal Detection.		
Bypass	If this option is selected, the web portal page would temporarily bypass without authentication when the number of HTTPS sessions exceed the default limit.		
Landing Page After A	uthentication		
Fixed URL	Specifies the webpage that will be displayed after the user has successfully authenticated.		
	The user will be redirected to the specified URL. This could be used for displaying advertisements to users, such as guests requesting wireless Internet access in a hotel.		
User Requested URL	The user will be redirected to the URL they initially requested.		
Bulletin Message	The message configured here will be briefly shown for a few seconds to the user.		
	Default Message - This button is enabled when Bulletin Message is selected. Click to load the default text into the bulletin message textbox.		
Applied Interfaces	Applied Interfaces		
Subnet	The current Hotspot Web Portal profile will be in effect for the selected subnets.		
WLAN	The current Hotspot Web Portal profile will be in effect for the selected WLAN SSIDs.		
Finish	Click to complete the configuration.		
Cancel	Click to abort the configuration process and return to the profile summary page.		

VII-4-2 Quota Management

The system administrator can specify bandwidth and sessions quota which is only applicable to the web portal clients.

Settings configured in Quota Management will override the policies set in Bandwidth Management>>Bandwidth Limit and Bandwidth Management>>Limit.

Available settings are explained as follows:

Item	Description
Bandwidth Limit	Check the box to override the policy configured in Bandwidth Management>>Bandwidth Limit.
Session Limit	Check the box to override the policy configured in Bandwidth Management>>Session Limit.
Quota Policy Profile	Add - Create up to 20 policy profiles in such page.

To create a new quotal policy profile, click Add to open the followining page.

Hotspot Web Portal >> Management >> Quota Policy Profile 2	
Profile Name	level 2
Account Validity	
Expired Time After the First Login	0 vdays 5 vhours 0 vmin
☐ Idle Timeout	0 min
Device Control	
Devices Allowed per account	Unlimited ▼
Reconnection Time Restriction	○ At 0 v everyday
	Block the same user from reconnecting before the set time
	● 0 ✔ hours 0 ✔ min
	Block the same user from reconnecting for the set period
Bandwidth and Session Limit	
☐ Bandwidth Limit	
Download Limit	0
Upload Limit	0 ● Kbps ○ Mbps
☐ Session Limit	0 sessions
	Cancel OK

Item	Description
Profile Name	Enter a name for a new profile.
Account Validity	Set the duration for which the login is valid. Expired Time After the First Login - Sets the days, hours, and minutes. After the login has expired, Vigor router will block the client from accessing the network/Internet. Idle Timeout - When this option is selected, Vigor router will terminate the network connection if the is no activity from the user after the specified idle time has passed.
Device Control	Set the maximum number of devices that can be connected for each account, and the time restriction for the client accessing Internet via the web portal. Devices Allowed per account - Use the drop-down list to select the maximum number of devices that can be connected to the network using the same account. Reconnection Time Restriction - Blocks the account from being used to connect devices to the network in one of two ways: At Everyday - After the login expires, the account cannot be used to connect devices to the network until the set time of day. Hours min - After the login expires, the account cannot be used to connect devices to the network for a set period of time.
Bandwidth and Session Limit	Bandwidth Limit - Check the box to configure bandwidth limit for web portal client.

 Download/Upload Limits - Set the maximum upload and download speeds.
Session Limit- Check the box to configure a maximum session limit for web portal clients.

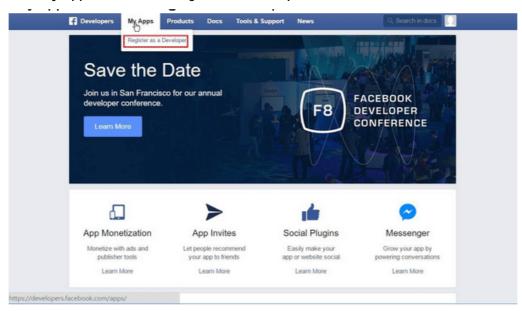

After finishing all the settings here, please click $\ensuremath{\mathsf{OK}}$ to save the configuration.

Application Notes

A-1 How to create Facebook APP for Web Portal Authentication?

The new web portal feature support social login as authentication method, and allows network administrator to authenticate LAN clients by their Google or Facebook account. This document introduces how to create Facebook APP, and generate the APP ID and APP secret that can be used in Web Portal setup.

- 1. Register as FB Developer: Go to https://developers.facebook.com/ and login the FB account.
- 2. Register the Facebook account as a Developer (If the account has been verified previously, this step can be skipped.)
- 3. Click My Apps then choose Register as Developer.

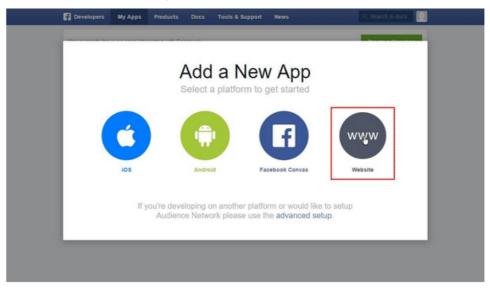

4. Switch to YES then click Next on pop-up window.

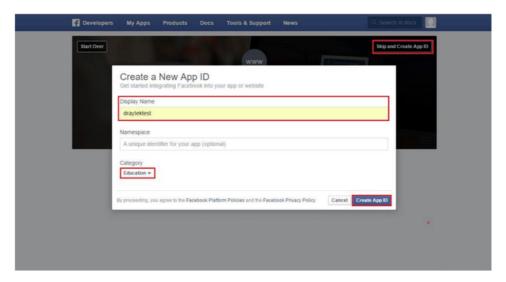

5. Choose country then type phone number, click Send as Text in Get Confirmation Code. Wait confirmation code message received then enter the confirmation code. Click Register to finish the register process.

6. Add a New App. Click on My Apps > Add a New App. Choose Website platform.

7. Click Skip and Create App ID on first use. Type Display Name. Choose Category. Click Create App ID.

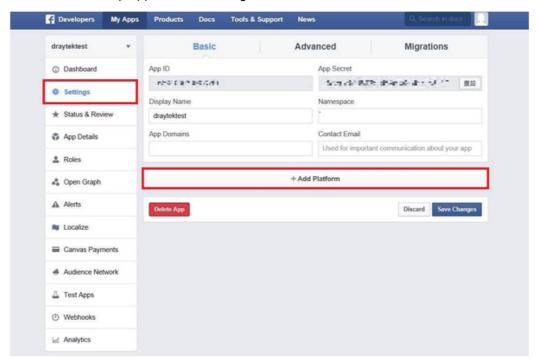

8. Pops up security check window, select the answer, and then click Submit to finish the process.

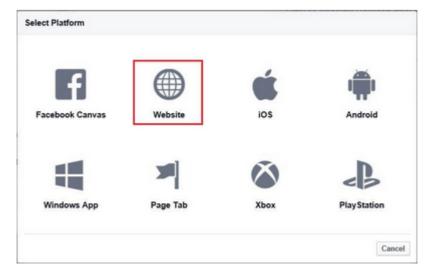

9. On Dashboard, user can get App ID and App Secret, these information will be used in Vigor Router's Web Portal Setup.

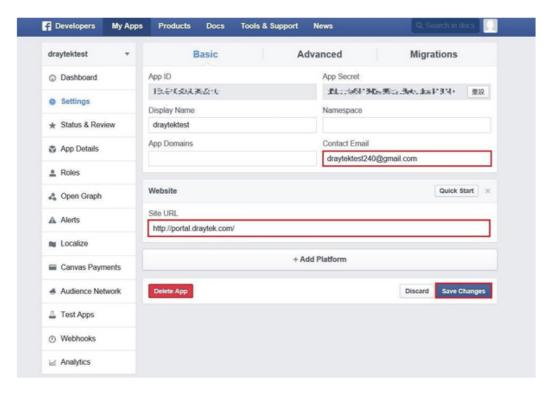

10. Add Platform on My Apps. Go to Settings then click Add Platform.

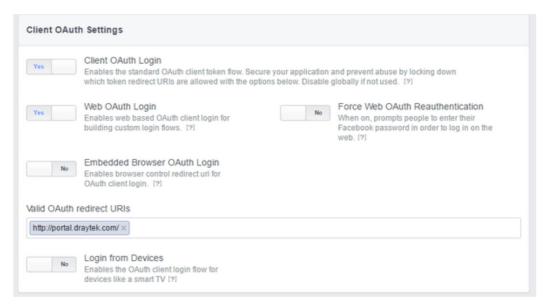

11. Choose Website in Select Platform window.

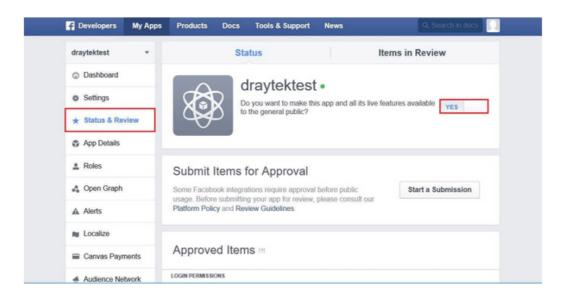

12. Enter the Site URL as http://portal.draytek.com. (*Note*: If you change http port in the vigor, please add http port in URLs. For example, we use 8080 as http port and we'll put http://portal.draytek.com:8080). Enter the Contact Email. And click Save Change.

13. Set up Client OAuth. Go to Settings >> Advanced >> Client OAuth Settings, enter "http://portal.draytek.com" in Valid OAuth redirect URIs, and save changes.

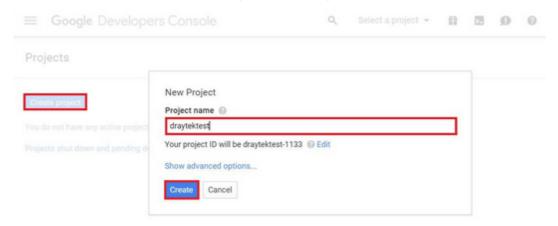

14. Go to My Apps>>Status & Review, and switch available status to YES to activate the APP.

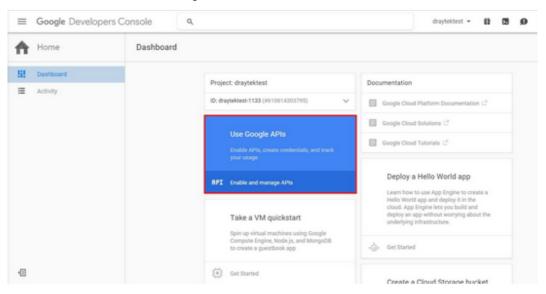

A-2 How to create Google APP for Web Portal Authentication?

The new web portal feature support social login as authentication method, and allows network administrator to authenticate LAN clients by their Google or Facebook account. This document introduces how to create Facebook APP, and generate the APP ID and APP secret that can be used in Web Portal setup.

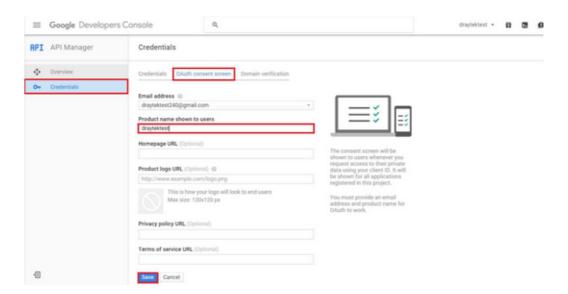

1. Create Developer project. Go to https://code.google.com/apis/console, login with a Google account then click Create project. Type project name then click Create.

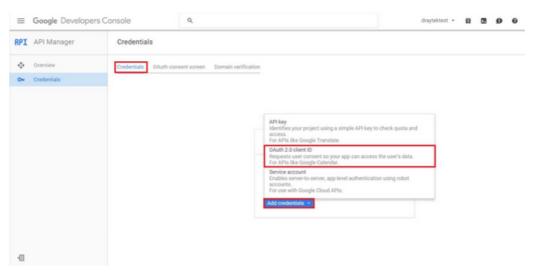

2. On Dashboard, choose Use Google APIs.

3. Edit Auth Consent screen. Go to Credentials > Auth consent screen. Enter your email, product name and other optional item then click on Save.

4. Create Client ID. Click Credentials and Click Add credentials > OAuth2.0 client ID.

- 5. Choose Web application as Application Type, then enter name. Set Authorized JavaScript origins and Authorized redirect URLs as http://portal.draytek.com, and click Create. (*Note*: If you change http port in the vigor, please add http port in URLs. For example, we use 8080 as http port and we'll put http://portal.draytek.com:8080).
- 6. Get client ID and client secret. Such information will be used in Vigor Router's Web Portal Setup page.

VII-5 Central Management (AP)

Vigor2135 can manage the access points supporting AP management via Central AP Management.

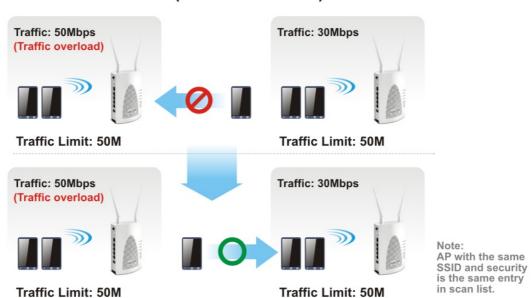

AP Maintenance

Vigor router can execute configuration backup, configuration restoration, firmware upgrade and remote reboot for the APs managed by the router. It is very convenient for the administrator to process maintenance without accessing into the web user interface of the access point.

Load Balance for AP

The parameters configured for Load Balance can help to distribute the traffic for all of the access points registered to Vigor router. Thus, the bandwidth will not be occupied by certain access points.

AP Load Balance (Traffic overload)

Web User Interface

Central Management AP Status WLAN Profile AP Maintenance Traffic Graph Load Balance

VII-5-1 Status

This page displays current status (online, offline or SSID hidden, IP address, encryption, channel, version, password and etc.) of the access points managed by Vigor router. Please open Central AP Management>>Function Support List to check what AP Models are supported.

Central Management >> AP >> Status

- 1. Display the overall mesh network information instead of the each AP in the mesh network.
- 2. The status of local mesh network is listed on Mesh >> Mesh Status page.
- When AP Devices connect via an intermediary switch, please ensure that UDP:4944 port and the HTTP port of AP Devices are not blocked so that the AP status can be retrieved.

Item	Description
Index	Click the index number link for viewing the settings summary of the access point.
Device Name	The name of the AP managed by Vigor router will be displayed here.
IP Address	Display the true IP address of the access point.
SSID	Display the SSID configured for the access point(s) connected to Vigor router.
Ch.	Display the channel used by the access point.
Uptime	Display the duration of the AP powered up.
Version	Display the firmware version used by the access point.
Password	Vigor2135 can get related information of the access point by accessing into the web user interface of the access point. This button is used to modify the logging password of the connected access point.

VII-5-2 WLAN Profile

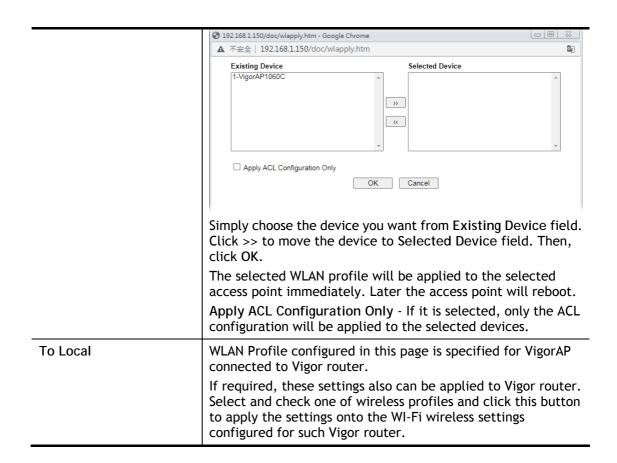

WLAN profile is used to apply to a selected access point. It is very convenient for the administrator to configure the setting for access point without opening the web user interface of the access point.

Central Management >> AP >> WLAN Profile

Click the number link of the selected profile to modify the content of the profile. Available settings are explained as follows:

Item	Description
Profile	There are five WLAN profiles offered to be configured. Simply click the index number link to open the modification page.
Name	Display the name of the profile.
	The default profile cannot be renamed.
Main SSID	Display the SSID configured by such wireless profile.
Security	Display the security mode selected by such wireless profile.
Multi-SSID	Enable means multiple SSIDs (more than one) are active.
	Disable means only SSID1 is active.
WLAN ACL	Display the name of the access control list.
Rate Ctrl	Display the upload and/or download transmission rate.
Clone	It can copy settings from an existing WLAN profile to another WLAN profile. First, you have to check the box of the existing profile as the original profile. Second, click Clone. The following dialog will appear. WLAN Profile - Google Chrome
	Third, choose the profile index to accept the settings from the original profile. Forth, type a new name in the field of Renamed as. Last, click Apply to save the settings on this dialog. The new profile has been created with the settings coming from the original profile.
То АР	Click it to apply the selected wireless profile to the specified Access Point.

How to edit the wireless LAN profile?

- 1. Select the WLAN profile (index number 1 to 2) you want to edit.
- 2. Click the index number link to display the following page.

Central Management >> AP >> WLAN Profile

WLAN Profile Edit Device Settings ☐ Auto Provision **Profile Name** Default Administrator admin Password 2nd Subnet Olisable Enable ☐ Enable Management VLAN: LAN-A VLAN ID 0 $(0 \sim 4095)$ Management VLAN LAN-B VLAN ID 0 $(0 \sim 4095)$ WLAN General Setting

4. After finished the above web page configuration, click Next to open the following page for 5G wireless security settings.

5. When you finished the above web page configuration, click Finish to exit and return to the first page. The modified WLAN profile will be shown on the web page.

VII-5-3 AP Maintenance

Vigor router can execute configuration backup, configuration restoration, firmware upgrade and remote reboot for the APs managed by the router. It is very convenient for the administrator to process maintenance without accessing into the web user interface of the access point.

Info

Config Backup can be performed to one AP at one time. Others functions (e.g., Config Restore, Firmware Upgrade, Remote Reboot can be performed to more than one AP at one time by using Vigor2135.

AP Maintenance Select Action Action Type: File/Path: 基擇檔案 未選擇任何檔案 Select Device Existing Device Selected Device (**All**) **All** *

OK

Cancel

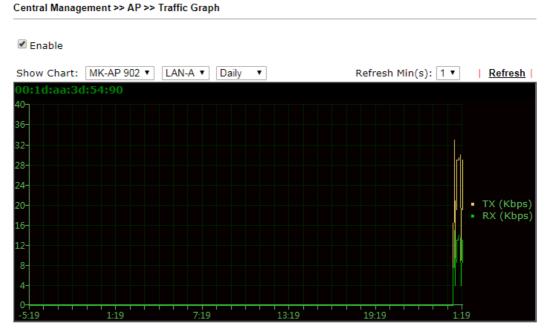

Item	Description
Action	There are four actions provided by Vigor router to manage the access points. Config Backup Config Backup Config Restore Firmware Upgrade Remote Reboot Factory Reset Vigor router can backup the configuration of the selected AP, restore the configuration for the selected AP, perform the firmware upgrade of the selected AP, reboot the selected AP remotely and perform the factory reset for the selected AP.
File/Path	Specify the file and the path which will be used to perform Config Restore or Firmware Upgrade.
Select Device	Display all the available access points managed by Vigor router. Simply click << or >> to move the device(s) between

	Select Device and Selected Device areas.
Selected Device	Display the access points that will be applied by such function after clicking OK.

After finishing all the settings here, please click OK to perform the action.

VII-5-4 Traffic Graph

Click Traffic Graph to open the web page. Choose one of the managed Access Points, LAN-A, daily or weekly for viewing data transmission chart. Click Refresh to renew the graph at any time.

Note:

Enabling/Disabling AP Traffic Graph will also Enable/Disable the External Devices Function.

The horizontal axis represents time; the vertical axis represents the transmission rate (in kbps).

Info

Enabling/Disabling such function will also enable/disable the External Devices function.

VII-5-5 Load Balance

The parameters configured for Load Balance can help to distribute the traffic for all of the access points registered to Vigor router. Thus, the bandwidth will not be occupied by certain access points.

Central Management >> AP >> Load Balance

8 3:		
Stop accepting new Dissociate existing	station by longest idle time	
_	station by longest line time station by worst signal strength if it is less than -0 dBm (100 %)	
Choose to Apply		
Choose to Apply		

The maximum station number of Wireless LAN (2.4GHz) will be applied to both Wireless LAN (2.4GHz) and Wireless LAN (5GHz) if the firmware version of AP900 is less than or equal to 1.1.4.1.

Item	Description
AP Load Balance	It is used to determine the operation mode when the system detects overload between access points. Disable - Disable the function of AP load balance.
	By Station Number -The operation of load balance will be executed based on the station number configured in this page. It is used to limit the allowed number for the station connecting to the access point. The purpose is to prevent lots of stations connecting to access point at the same time and causing traffic unbalanced. Please define the required station number for WLAN (2.4GHz) and WLAN (5GHz) separately.
	By Traffic - The operation of load balance will executed according to the traffic configuration in this page.
	By Station Number or Traffic - The operation of load balance will be executed based on the station number or the traffic configuration.
Station Number Threshold	Set the number of stations as a threshold to activate AP load balance.
Traffic Threshold	Upload Limit -Use the drop down list to specify the traffic

	limit for uploading.
_	Download Limit - Use the drop down list to specify the traffic limit for downloading.
Action When Threshold Exceeded	Stop accepting new connections - When the number of stations or the traffic reaches the threshold defined in this web page, Vigor router will stop any new connection asked by other access point.
	Dissociate existing station by longest idel time - When the access point is overload (e.g., reaching the limit of station number or limit of network traffic), it will terminate the network connection of the client's station which is idle for a longest time.
	Dissociate existing station by worst signal strength if it is less than - When the access point is overload (e.g., reaching the limit of station number or limit of network traffic), it will terminate the network connection of the client's station with the weakest signal.
Choose to Apply	Determine which AP shall be applied with the load balance. AII APs - All APs shall be applied with the load balance. Specific APs - The function of load balance will be applied to the AP specified in this field.

After finishing all the settings here, please click OK to save the configuration.

VII-6 Central Management (External Devices)

Central Management >> External Device

Vigor router can be used to connect with many types of external devices. In order to control or manage the external devices conveniently, open External Devices to make detailed configuration.

External Device Syslog

Part VIII Others

Define objects such as IP address, service type, keyword, file extension and others. These pre-defined objects can be applied in CSM.

USB device connected on Vigor router can be regarded as a server or WAN interface. By way of Vigor router, clients on LAN can access, write and read data stored in USB storage disk with different applications.

VIII-1 Objects Settings

This section allows the creation of objects and object groups from IP addresses, service types, keywords, file extensions, SMS and email recipients, and notification types. Once set up, these objects can be applied to firewall and content management rules.

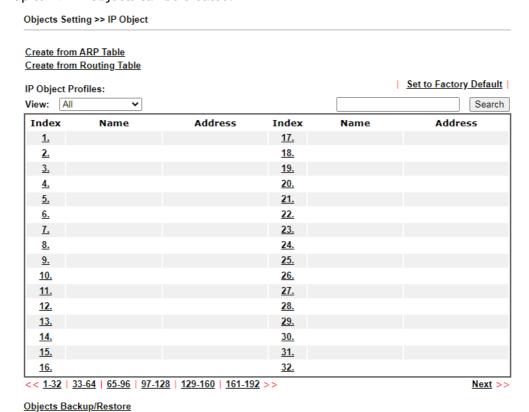

Web User Interface

VIII-1-1 IP Object

For IPs in a range and service ports in a limited range usually will be applied in configuring router's settings, therefore we can define them with *objects* and bind them with *groups* for using conveniently. Later, we can select that object/group for applying it. For example, all the IPs in the same department can be defined with an IP object (a range of IP address).

Up to 192 IP Objects can be created.

Item	Description
View	Use the drop down list to choose a type (Single Address, Range Address, Subnet Address, Mac Address or all) that IP object with the selected type will be shown on this page.
Set to Factory Default	Clear all profile settings.
Search	Enter a string of the IP object that you wan to search.
Index	Profile number of the IP object.
Name	Name of the object.
Address	Displays the IP address configured for the object profile.
Objects Backup/Restore	Click it to backup or restore the IP object.

To set up a profile, click the profile number under Index column to bring up the configuration page.

Objects Setting >> IP Object Profile Index: 1 Name: RD Department Interface: Range Address 🕶 Address Type: 00:00:00:00:00:00 Mac Address: Start IP Address: 192.168.1.9 Select End IP Address: 192.168.1.9 Select 255.255.255.254 / 31 🗸 Subnet Mask: Invert Selection:

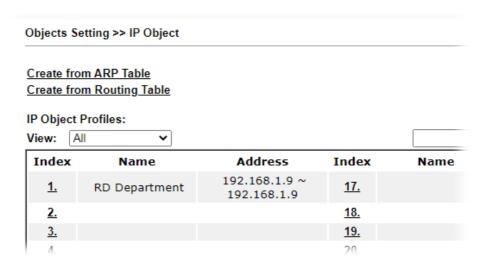

<u>Next</u> >>

Item	Description	
Name	Name that identifies this profile. Maximum length is 15 characters.	
Interface	The network interface on which the IP address or addresses are to be found.	
	Any - All network interfaces.	
	LAN/DMZ/RT/VPN - All network interfaces except WAN.	
	WAN - Only WAN interfaces.	
Address Type	Type of Addresses.	
	Any Address - Object covers all IP addresses.	
	Single Address - Object covers one IP address.	
	Range Address - Object covers a range of IP addresses.	
	Subnet Address - Object covers a range of IP addresses specified in subnet notation.	
	Mac Address - Object contains a MAC address.	
MAC Address	Enter MAC address of the network device, if Address Type is Mac Address.	
Start IP Address	Enter beginning IP address, if Address Type is one of Single	

	Address, Range Address and Subnet Address.
End IP Address	Enter ending IP address, if Address type is one of Single Address, Range Address and Subnet Address.
Subnet Mask	Enter subnet mask, if Address type is Subnet Mask.
Invert Selection	If selected, all addresses except the ones entered above will be used.

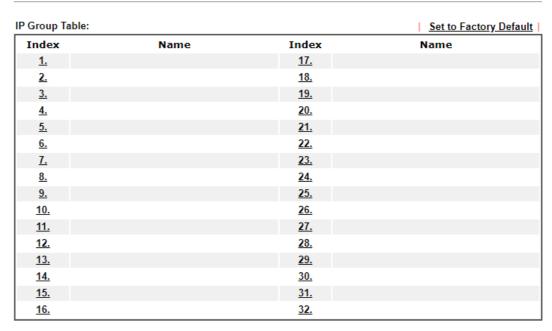

To save changes on the page, click OK. To discard changes, click Cancel. To blank out all settings in the current IP object, click Clear.

VIII-1-2 IP Group

Multiple IP Objects can be placed into an IP Group.

Objects Setting >> IP Group

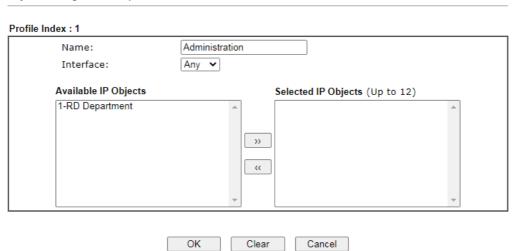

Objects Backup/Restore

Available settings are explained as follows:

Item	Description
Set to Factory Default	Clear all profile settings.
Index	Index number of the profile.
Name	Name that identifies the profile.
Objects Backup/Restore	Click it to backup or restore the IP group object.

To set up a profile, click its index to bring up the configuration page.

Objects Setting >> IP Group

Available settings are explained as follows:

Item	Description
Name	Name that identifies this profile. Maximum length is 15 characters.
Interface	Select WAN, LAN or Any to filter IP objects.
Available IP Objects	All available IP objects that are associated with the selected interface.
Selected IP Objects	IP objects that have been added to this profile.

To add an IP object to the IP Group, select it under Available IP Objects, then click the >> button. To remove an IP object from the IP Group, select it under Selected IP Objects, then click the << button.

To save changes on the page, click OK. To discard changes, click Cancel. To blank out all settings in the current IP group, click Clear.

VIII-1-3 IPv6 Object

Up to 64 IPv6 Objects can be created.

Objects Setting >> IPv6 Object

SMTP Port	25	
Sender Address	carrie_@draytek.com	
☐ Use SSL		
✓ Authentication		
Username	john	
Password	•••••	
Sending Interval	0	(seconds)

Note:

- 1. Only one mail can be sent during the "Sending Interval" time.
- 2. If the "Sending Interval" was set to 0, there will be no limitation.

OK Clear Cancel Send a Test E

Available settings are explained as follows:

Item	Description	
Profile Name	Name that identifies this profile. Maximum length is 31 characters.	
SMTP Server	IP address of the SMTP server.	
SMTP Port	Port number of the SMTP server.	
Sender Address	E-mail address of the sender.	
Use SSL	Check this box to use SMTPS (SMTP over SSL) to communicate with the SMTP server. Note that the de facto port used for SMTPS is 465.	
Authentication	Select to send username and password to SMTP server for authentication.	
	Username - Username for authentication. Maximum length is 31 characters.	
	Password - Password for authentication. Maximum length is 31 characters.	
Sending Interval	Minimum amount of time, in seconds, to wait between sending e-mail messages.	
Send a Test E-mail	Click it to send a test e-mail according to above configuration.	

To save changes on the page, click OK. To discard changes, click Cancel. To blank out all settings in the mail service object, click Clear.

VIII-1-11 Notification Object

Up to 8 Notification Objects can be set up for use in Application>>SMS Alert Service and Application>>Mail Alert Service.

Objects Setting >> Notification Object

		<u>Set to Factory Default</u>
Index	Profile Name	Settings
<u>1.</u>		
<u>2.</u>		
<u>3.</u>		
<u>4.</u>		
<u>5.</u>		
<u>6.</u>		
<u>7.</u>		
<u>8.</u>		

Objects Backup/Restore

To set up a profile, click its index to bring up the configuration page.

Objects Setting >> Notification Object

Profile Name				
Category	Statu	ıs		
WAN	Disconnected	Reconnected		
VPN Tunnel	☐ Disconnected ☐ Downtime Limit 60~3600 seconds	Reconnected		
Temperature Alert	USB Out of Range			
WAN Budget	☐ Limit Reached	☐ Limit Reached		
Security	□ Web Log-in □ Telnet Log-in □ SSH Log-in □ TR069 Log-in □ FTP User Log-in □ Config Changed(From WebUI	and CLI)		

Available settings are explained as follows:

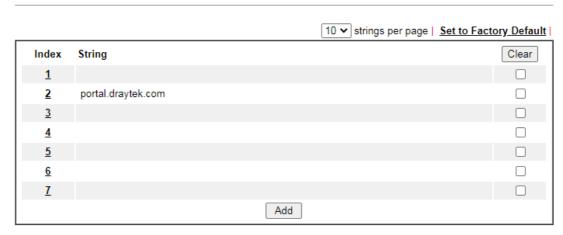

Item	Description
Profile Name	Name that identifies this profile. Maximum length is 31 characters.
Category	Areas to be monitored.
Status	Select the states to be monitored.

To save changes on the page, click OK. To discard changes, click Cancel.

VIII-1-12 String Object

This page allows you to set string profiles which will be applied in route policy (domain name selection for destination) and etc.

Objects Setting >> String Object

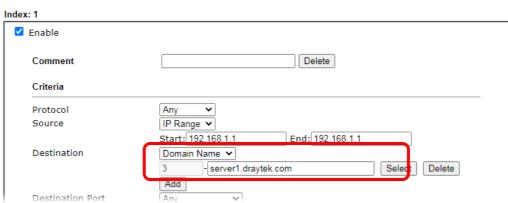

Objects Backup/Restore

Item	Description	
Add	Click it to open the following page for adding a new string object. String Max: 253 characters OK Cancel	
Set to Factory Default	Click it to clear all of the settings in this page.	
Index	Display the number link of the string profile.	
String	Display the string defined.	
Clear	Choose the string that you want to remove. Then click this check box to delete the selected string.	
Objects Backup/Restore	Click it to backup or restore the string object.	

Below shows an example to apply string object (in route policy):

Routing >> Load-Balance/Route Policy

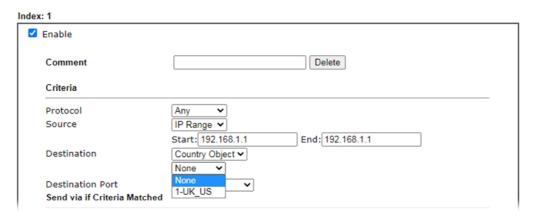

VIII-1-13 Country Object

The country object profile can determine which country/countries shall be blocked by the Vigor router's Firewall.

Objects Setting >> Country Object Country Object Table: Set to Factory Default Index Name Index <u>17.</u> <u>1.</u> <u>2.</u> <u>18.</u> <u>3.</u> <u>19.</u> <u>4.</u> <u>20.</u> <u>5.</u> <u>21.</u> 6. 22. <u>7.</u> <u>23.</u> <u>8.</u> <u>24.</u> <u>9.</u> <u>25.</u> <u>10.</u> <u>26.</u> <u>27.</u> <u>11.</u> <u>12.</u> <u>28.</u> <u>13.</u> <u>29.</u> <u>14.</u> <u>30.</u> <u>15.</u> <u>31.</u> <u>16.</u> <u>32.</u>

Objects Backup/Restore

The country object, by grouping IP addresses for multiple countries, can be applied by other functions such as router policy destination (refer to the following figure for example).

To set a new profile, please do the steps listed below:

1. Open Object Setting>>Country Object, and click the number (e.g., #1) under Index column for configuration in details.

2. The configuration page will be shown as follows:

Objects Setting >> Country Object

The maximum number of Selected Country is 16.

Available settings are explained as follows:

Item	Description
Name	Enter a name for such profile. The maximum length of the name you can set is 15 characters.
Available Country / Selected Country	Select any country from Available Country. Click >> to move the selected country and place on Selected Country. Note that one country profile can contain 1 up to 16 countries.

3. After finishing all the settings here, please click OK to save the configuration.

Objects Setting >> Country Object

Country Object	t Table:		Set to Factory Default
Index	Name	Index	Name
<u>1.</u>	Taiwan	<u>17.</u>	
<u>2.</u>		<u>18.</u>	
<u>3.</u>		<u>19.</u>	
<u>4.</u>		<u>20.</u>	
<u>5.</u>		<u>21.</u>	
<u>6.</u>		<u>22.</u>	
<u>7.</u>		<u>23.</u>	
<u>8.</u>		<u>24.</u>	

VIII-1-14 Objects Backup/Restore

The objects settings can be backup as a file. The backup file can be imported to the device to restore the configuration in the future if required.

bjects Setting >> Objects Backup/Restore

Restore	

Note:

For better compatibility, it's suggested to edit IP Objets with the provided default CSV template.

Item	Description	
Backup	Usually, the IP objects can be created one by one through the web page of Objects>>IP Object. However, to a user who wants to save more time in bulk creating IP objects, a quick method is offered by Vigor router to modify the IP objects with a single file, a CSV file.	
	All of the IP objects (or the template) can be exported as a file by clicking Download. Then the user can open the CSV file through Microsoft Excel and modify all the IP objects at the same time.	
	Backup the current IP Objects with a CSV file - Click it to backup current IP objecsts as a CSV file. Such file can be restored for future use.	
	Download the default CSV template to edit - After clicking it, press Download to store the default CSM template (a table without any input data) to your hard disk.	
	Download - Download the CSV file from Vigor router and store in your hard disk.	
Restore	Select - Click it to specify a predefined CSV file. Restore - Import the selected CSV file onto Vigor router.	

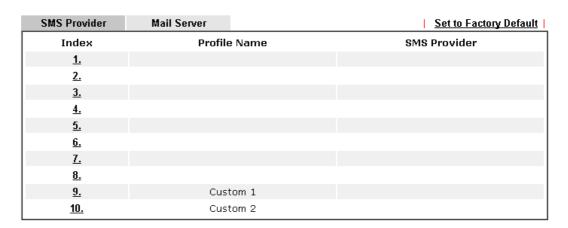

Application Notes

A-1 How to Send a Notification to Specified Phone Number via SMS Service in WAN Disconnection

Follow the steps listed below:

- 1. Log into the web user interface of Vigor router.
- 2. Configure relational objects first. Open Object Settings>>SMS/Mail Server Object to get the following page.

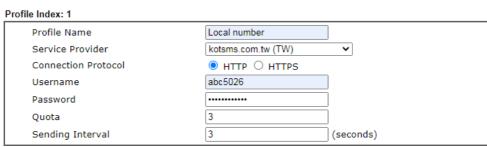

Objects Setting >> SMS / Mail Service Object

Index 1 to Index 8 allows you to choose the built-in SMS service provider. If the SMS service provider is not on the list, you can configure Index 9 and Index 10 to add the new service provider to Vigor router.

3. Choose any index number (e.g., Index 1 in this case) to configure the SMS Provider setting. In the following page, Enter the username and password and set the quota that the router can send the message out.

Objects Setting >> SMS / Mail Service Object

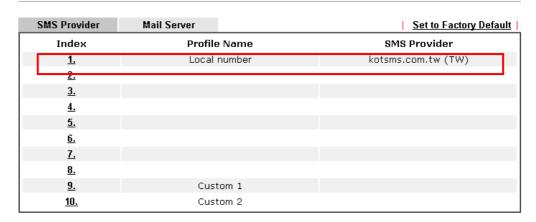

Note:

- 1. Only one message can be sent during the "Sending Interval" time.
- 2. If the "Sending Interval" was set to 0, there will be no limitation.

OK	Clear	Cancel	Send a Test Message

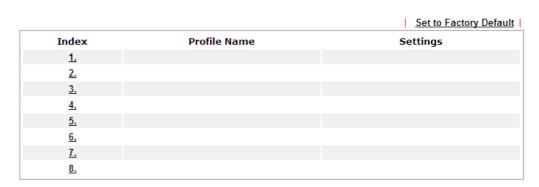

4. After finished the settings, click OK to return to previous page. Now you have finished the configuration of the SMS Provider profile setting.

Objects Setting >> SMS / Mail Service Object

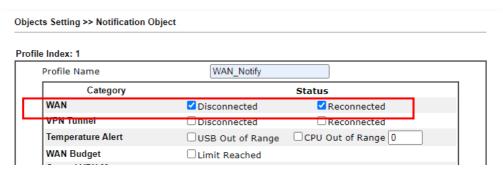

5. Open Object Settings>>Notification Object to configure the event conditions of the notification.

Object Settings >> Notification Object

6. Choose any index number (e.g., Index 1 in this case) to configure conditions for sending the SMS. In the following page, Enter the name of the profile and check the Disconnected and Reconnected boxes for WAN to work in concert with the topic of this paper.

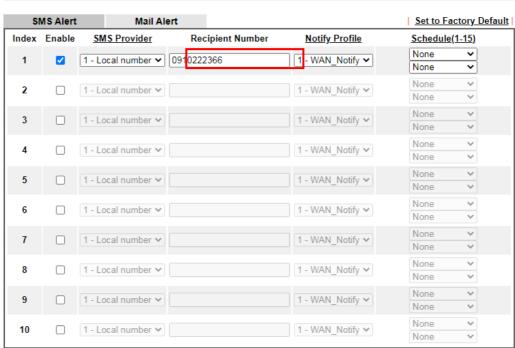

7. After finished the settings, click OK to return to previous page. You have finished the configuration of the notification object profile setting.

Object Settings >> Notification Object

8. Now, open Application >> SMS / Mail Alert Service. Use the drop down list to choose SMS Provider and the Notify Profile (specify the time of sending SMS). Then, Enter the phone number in the field of Recipient Number (the one who will receive the SMS).

Applications >> SMS / Mail Alert Service

Note:

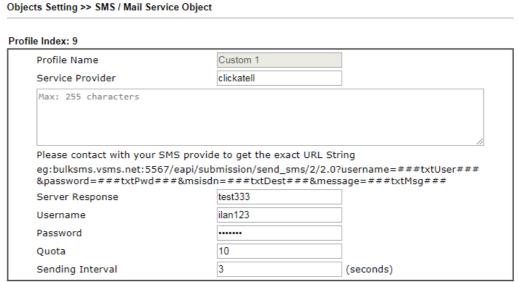

All the SMS Alert profiles share the same "Sending Interval" setting if they use the same SMS Provider.

9. Click OK to save the settings. Later, if one of the WAN connections fails in your router, the system will send out SMS to the phone number specified. If the router has only one WAN interface, the system will send out SMS to the phone number while reconnecting the WAN interface successfully.

Remark: How the customize the SMS Provider

Choose one of the Index numbers (9 or 10) allowing you to customize the SMS Provider. In the web page, Enter the URL string of the SMS provider and Enter the username and password. After clicking OK, the new added SMS provider will be added and will be available for you to specify for sending SMS out.

Note:

- 1. Only one message can be sent during the "Sending Interval" time.
- 2. If the "Sending Interval" was set to 0, there will be no limitation.

VIII-2 USB Application

USB devices connected to the Vigor router can function as storage servers, WAN interfaces, network printers or thermometers.

After setting the configuration in USB Application, a USB storage device can be accessed using either the FTP or SMB protocol from LAN clients with the IP address of the Vigor router and the username and password entered in USB Application>>USB User Management.

Info

USB modems that are supported by the router are listed in USB Application>>Modem Support List. For network connection via USB modem, refer to WAN>>Internet Access and WAN>>General Setup for detailed information.

Web User Interface

VIII-2-1 USB General Settings

This page allows you to configure the file sharing feature of the Vigor router, where USB mass storage devices such as thumb drives and hard drives can be made accessible to LAN clients. Currently, only FAT16 and FAT32 file systems are supported by the Vigor router, so verify that the USB drive contains these file systems. FAT32 is recommended because of its long filename support, which FAT16 lacks.

USB Application >> USB General Settings

USB General Settings	
General Settings	
Simultaneous FTP Connections	5 (Maximum 6)
Default Charset	English
SMB File Sharing Service (Network Neigh	borhood)
○ Enable	
■ LAN Only □ LAN And WAN	
NetBios Name Service	
Workgroup Name	WORKGROUP
Host Name	Vigor
Printer Server	
○ Enable	

Note:

- 1. If character set is set to "English", only English long file name is supported.
- Multi-session FTP download will be banned by Router FTP server. If your FTP client has a multiconnection mechanism, such as FileZilla, you should limit client connections to 1 to improve performance.
- 3. A workgroup name must be different from the host name. The workgroup name can have up to 15 characters and the host name can have up to 15 characters. Names cannot contain any of the following: .; : " < > * + = / \ | ?.

Item	Description
General Settings	Simultaneous FTP Connections - Enter the maximum number of simultaneous FTP sessions allowed. The router allows up to 6 simultaneous sessions.
	Default Charset - Select the character set for file and directory names. Currently, the Vigor router supports four

	sharactor sate. The default charget is English
	character sets. The default charset is English.
SMB File Sharing Service	Click Enable to enable SMB service (file sharing).
Access Mode	LAN Only - Only users on the LAN can connect access the shared USB disk. LAN And WAN - Both LAN and WAN users can access SMB server of the router.
NetBios Name Service	For SMB file sharing service, you need to specify a workgroup name and a host name. The two names cannot be identical, and neither can contain any of the following characters: ; : " < > * + = \ ?
	Workgroup Name - Enter the workgroup name. Maximum allowed length is 15 characters.
	Host Name - Enter the NetBIOS hostname for the router. Maximum allowed length is 23 characters.
Printer Server	Enable - Select to allow the Vigor router to act as a print server for printers connected the USB.

Select OK to save changes on the page.

VIII-2-2 USB User Management

USB Application >> USB User Management

This page allows you to set up profiles for FTP/SMB users. Any user who wants to access the USB storage disk must authenticate using a username and password that have been configured on this page. Please connect a USB storage device before adding or modifying settings on this page, or else an error message will appear requesting you to do so before allowing you to proceed.

USB User Management Set to Factory Default **Directory Access** Index Enable Username **Home Folder** File Access Rule <u>2.</u> <u>3.</u> <u>4.</u> <u>5.</u> <u>6.</u> <u>7.</u> <u>8.</u> <u>9.</u> <u>10.</u> <u>11.</u> <u>12.</u> <u>13.</u> <u>14.</u> <u>15.</u> OK Cancel

Click index number to access into configuration page.

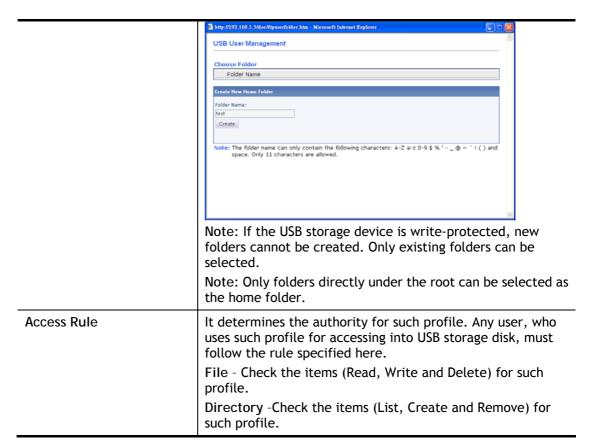

USB Application >> USB User Ma	anagement

Clear

Cancel

OK

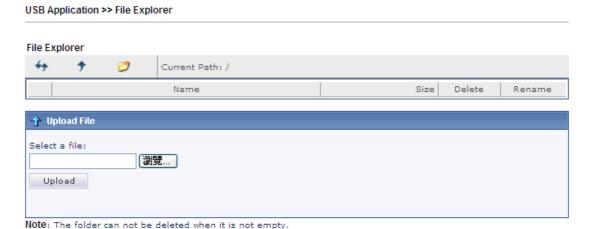

Item	Description
Enable	Check to activate this profile (account) for FTP service and / or SMB service. Later, the user can use the username specified in this page to login into FTP server.
Username	Enter the username for this user profile. Maximum allowed length of the username is 11 characters.
	Note: Anonymous user access is not supported.
	Note: "Admin" cannot be used as a username, as it is reserved for access to web pages on the Vigor router, and for FTP firmware upgrade.
	Note: Ensure that the FTP client does not use passive FTP mode as it is not supported by the Vigor router.
Password	Enter the password for this user profile. Maximum allowed length of the username is 11 characters.
Confirm Password	Enter the password again to confirm.
Home Folder	Enter the folder which will be the root folder for FTP and SMB sessions established using the credentials of this user profile. Only folders and files inside this selected root folder are accessible to the user. In addition, if the user types "/" here, the user can access into all of the disk folders and files in USB storage disk.
	To browse the list of folders available for selection, or to
	create a new folder, click the 🧭 icon.

To save changes on this page, ensure that a USB storage device is connected, and click OK. To discard changes, click Cancel. To blank out all settings in the current IP object, click Clear.

VIII-2-3 File Explorer

File Explorer offers an easy way for users to view and manage the content of USB storage disk connected on Vigor router.

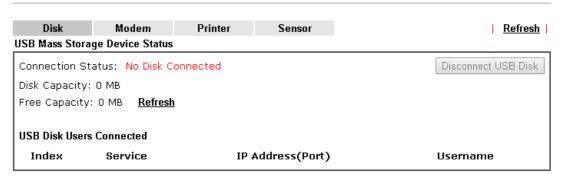

Item	Description
Refresh	Click this icon to refresh the list of files and folders.

† Back	Click this icon to return to the parent folder.
Create	Click this icon to add a new folder.
Current Path	Shows current folder.
Upload	To upload a file to the USB storage device, click the Browse button to bring up the file selection dialog box. Select the file you wish to upload, and click the Upload button to initiate the upload process.

VIII-2-4 USB Device Status

This page allows monitoring of the status of USB devices (disk, modem, printer, and sensor) connected to the Vigor router. To maintain the data integrity of a USB disk that is connected to the router, always click Disconnect USB Disk before unplugging the disk from the router.

USB Application >> USB Device Status

Available settings are explained as follows:

Item	Description
Connection Status	Shows whether a USB disk is connected or not. If there is no USB device connected to the Vigor router, "No Disk Connected" will be displayed.
Disk Capacity	Shows the total capacity of the USB storage disk.
Free Capacity	Shows the free space on the USB storage disk. Click Refresh at any time to get the most up-to-date free capacity.
USB Disk Users Connected	Shows the clients that are connected to the SMB/FTP server. Index - The profile index used by the LAN client to establish the connection. Service - Shows whether the connection is using FTP or SMB. IP Address - Shows the client's IP address. Username - Shows the username used to establish the connection.
Disconnect USB Disk	Before unplugging the USB storage device from the router, make sure you click this first to ensure that all data has been written to the disk and all open files are closed.

After a USB storage device has been connected, the Connection Status will be updated within a few seconds.

USB Application >> USB Device Status

Disk	Modem	Printer	Sensor	Refresh
USB Mass Storage	Device Status	i		
Connection Statu	ıs: Disk Cor	nnected		Disconnect USB Disk
Write Protect Sta	tus: No			
Disk Capacity: 20	109 MB			
Free Capacity: 92	25 MB <u>Refr</u>	<u>esh</u>		
USB Disk Users Co	nnected			
Index 5	Service	IP	Address(Port)	Username

VIII-2-5 Temperature Sensor

A USB Thermometer is now available. It complements your installed DrayTek router installations which will help you monitor the server or data communications room environment and notify you if the server room or data communications room is overheating.

During summer in particular, it is important to ensure that your server or data communications equipment are not overheating due to cooling system failures.

The inclusion of a USB thermometer in compatible Vigor routers will continuously monitor the temperature of its environment. When a pre-determined threshold is reached you will be alerted by either an email or SMS so you can undertake appropriate action.

For a list of supported USB thermometers, visit our website at https://www.draytek.com/en/products/usb-thermometer/ or contact your local DrayTek partner.

Temperature Sensor Settings

USB Application >> Temperature Sensor Setting

Temperature Chart	Temperature Sensor Settings
Display Settings	
Temperature Calibration	0.00
Temperature Unit	© Celsius O Fahrenheit
Alarm Settings	
☐ Enable Syslog Alarm	
Upper temperature limit	30.00
Lower temperature limit	18.00

Note:

Set 1) Notification Object, 2) SMS / Mail Service Object, 3) SMS / Mail Alert Service to make Vigor router send alert when the temperature reaches the limit.

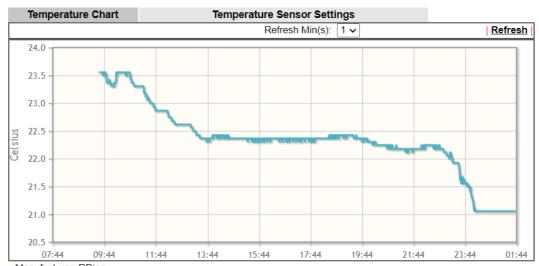

Item	Description
Display Settings	Temperature Calibration - Enter the difference between the actual temperature and the temperature as reported by the thermometer. Temperature Unit - Select the temperature scale to be used.
Alarm Settings	Enable Syslog Alarm - Select to enable recording of the temperature in Syslog.

Upper temperature limit/Lower temperature limit - Enter the upper and lower temperature limits. If the temperature falls outside of this range, an alert will be sent.

Temperature Chart

Below shows an example of temperature graph:

USB Application >> Temperature Sensor Graph

Manufacturer: RDing Product: TEMPer1F_V3.4 Current Temperature: 21.06 Average Temperature: 22.33 Maximum Temperature: 23.56 Minimum Temperature: 21.06

VIII-2-6 Modem Support List

This page lists the brands and models of USB modems that are supported by the Vigor router.

This list is subject to change between different versions of firmware as support for new modems are added.

USB Application >> Modem Support List

The following compatibility test lists 3.5G/LTE modems **supported by Vigor router under certain environment or countries.** If the LTE modem you have is on the list but cannot work properly, please write an e-mail to support@draytek.com or consult your dealer for further information.

Brand	Model	LTE	Access Mode	Status
4G system	XSPlug P3		PPP	Y
Aiko	Aiko 76E		PPP	Υ
	Alcatel L100V	Ø	DHCP	Y
	Alcatel L800	Ø	DHCP	Y
Alcatel	Alcatel W800	Ø	DHCP	Y
	Alcatel X500		PPP	Y
	Alcatel Y855	Ø	DHCP	Y

Android TM	SharesFinder	Υ
ios	eXPlayer	Y
ios	nPlayer	Υ

Y: Tested and is supported.

I: Supported but has some issue.

M: Has not been tested but might be supported.

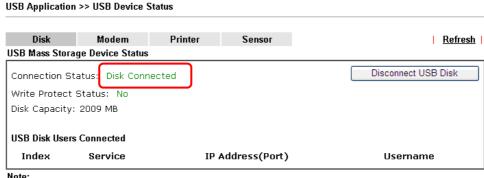

Application Notes

A-1 How can I get the files from USB storage device connecting to Vigor router?

Files on USB storage device can be reviewed by opening USB Application>>File Explorer. If it is necessary for you to delete, copy files on the device or write, paste files to the devcie, it must be done through SMB server or FTP server.

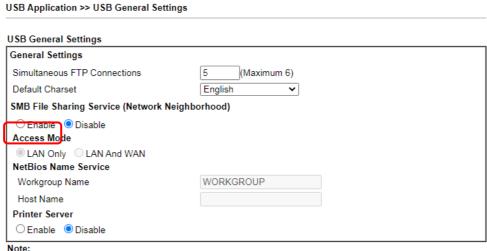

SMB service is based on the original USB FTP service. You will need to setup USB FTP first. We would like to give brief instructions on USB FTP setup here.

Plug the USB device to the USB port on the router. Make sure Disk Connected appears on the Connection Status as the figure shown below:

Note:

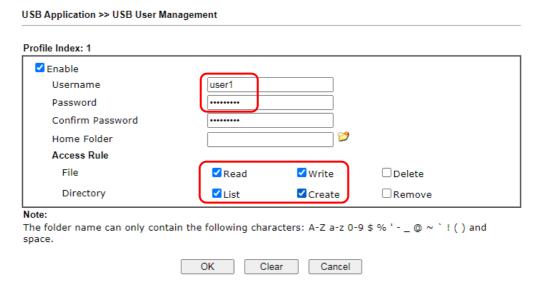

- 1. Only support FAT16 and FAT32 format, FAT32 is recommended.
- 2. Only support to mount single partition, maximum capacity is 500GB. If there are more then one partition, only one of them will be mounted.
- 3. Single file size can be up to 4GB, which is the limitation of FAT32 format.
- 4. If the write protect switch of USB disk is turned on, the USB disk is in READ-ONLY mode. No data can
- Then, please open USB Application >> USB General Settings to enable SMB service.

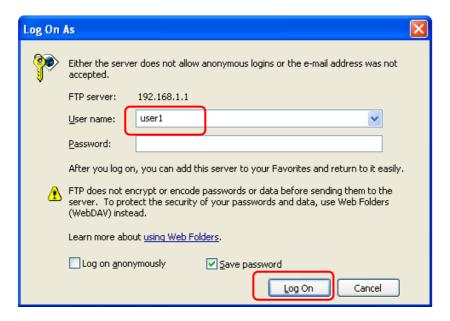

- 1. If character set is set to "English", only English long file name is supported.
- 2. Multi-session FTP download will be banned by Router FTP server. If your FTP client has a multi-connection mechanism, such as FileZilla, you should limit client connections to 1 to improve performance.
- 3. A workgroup name must be different from the host name. The workgroup name can have up to 15 characters and the host name can have up to 15 characters. Names cannot contain any of the following: . ; :

OK

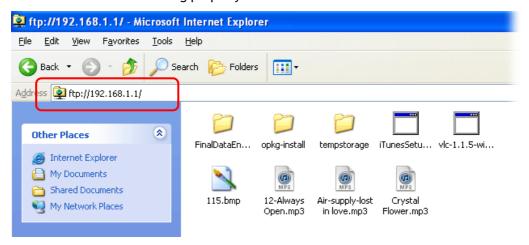

3. Setup a user account for the FTP service by using USB Application >> USB User Management. Click Enable to enable FTP/SMB User account. In the example below, we have set up a new account with the username "user1", and granted "Read", "Write" and "List" permissions to it.

- 4. Click OK to save the configuration.
- 5. To verify that the FTP service is running properly, open a browser window and enter ftp://192.168.1.1 as the destination. Replace 192.168.1.1 with the actual IP address of the router. When prompted to enter the login credentials, enter the username "user1" to login.

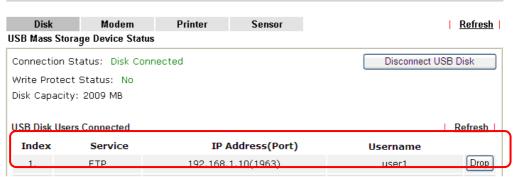

6. When the following screen appears, you have successfully connected to the FTP server and verified that it is running properly.

7. If you check USB Application >> USB Disk Status on browser, you will see the FTP session initiated by user1.

USB Application >> USB Device Status

Note:

- 1. Only support FAT16 and FAT32 format, FAT32 is recommended.
- 2. Only support to mount single partition, maximum capacity is 500GB. If there are more then one partition, only one of them will be mounted.
- 3. Single file size can be up to 4GB, which is the limitation of FAT32 format.
- 4. If the write protect switch of USB disk is turned on, the USB disk is in **READ-ONLY** mode. No data can be written to it.

Now, users in LAN of Vigor2135 can access into the USB storage device by entering ftp://192.168.1.1 on any browser. They can add or remove files / directories, depending on the Access Rule for FTP account settings in USB Application >> USB User Management.

Part IX Troubleshooting

This part will guide you to solve abnormal situations if you cannot access into the Internet after installing the router and finishing the web configuration.

IX-1 Diagnostics

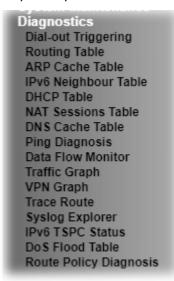

This section will guide you to solve abnormal situations if you cannot access into the Internet after installing the router and finishing the web configuration. Please follow sections below to check your basic installation status stage by stage.

- Checking if the hardware status is OK or not.
- Checking if the network connection settings on your computer are OK or not.
- Pinging the router from your computer.
- Checking if the ISP settings are OK or not.
- Backing to factory default setting if necessary.

If all above stages are done and the router still cannot run normally, it is the time for you to contact your dealer or DrayTek technical support for advanced help.

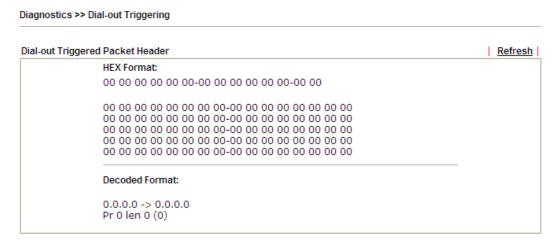

Web User Interface

This section contains utilities that can assist you in analyzing issues and failures during the setup and operation of the router.

IX-1-1 Dial-out Triggering

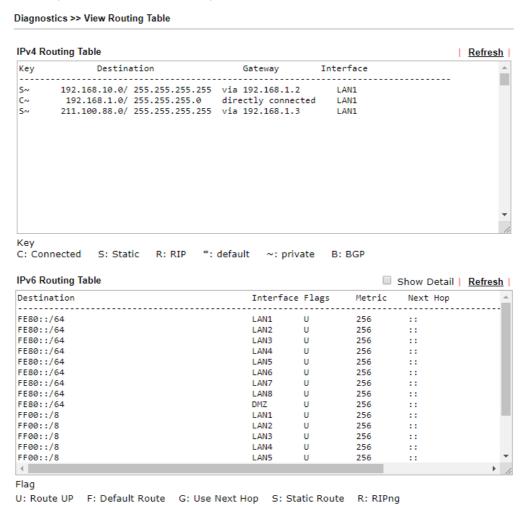

This page shows the packet header that is transmitted when a WAN connection (such as a PPPoE connection) is initiated.

Item	Description
HEX Format	Shows the dial-out triggered packet header in hexadecimal format.
Decoded Format	Shows the dial-out triggered packet header in human-readable format.
Refresh	Click it to reload the page.

IX-1-2 Routing Table

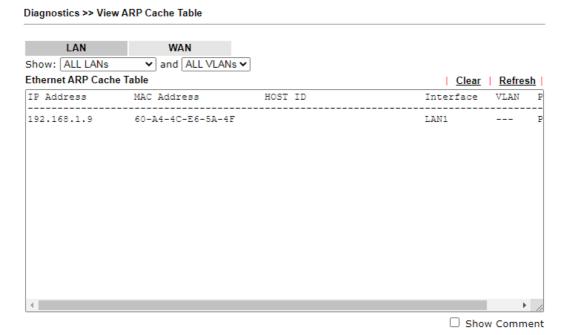

Click Diagnostics and click Routing Table to open the web page.

Item	Description
Refresh	Click it to reload the page.

IX-1-3 ARP Cache Table

Click Diagnostics followed by ARP Cache Table to view the contents of the ARP (Address Resolution Protocol) cache held in the router. The table shows the mappings between Ethernet hardware addresses (MAC Addresses) and IP addresses.

Item	Description
Show	Select the LAN(s) and VLAN(s) to display ARP table information. By default, information on all LANs and VLANs is displayed.
Refresh	Click it to reload the page with the most up-to-date information.

IX-1-4 IPv6 Neighbour Table

This page displays the mapping between Ethernet hardware addresses (MAC addresses) and IPv6 addresses. This information is helpful in diagnosing network problems, such as IP address conflicts.

Click Diagnostics and click IPv6 Neighbour Table to open the web page.

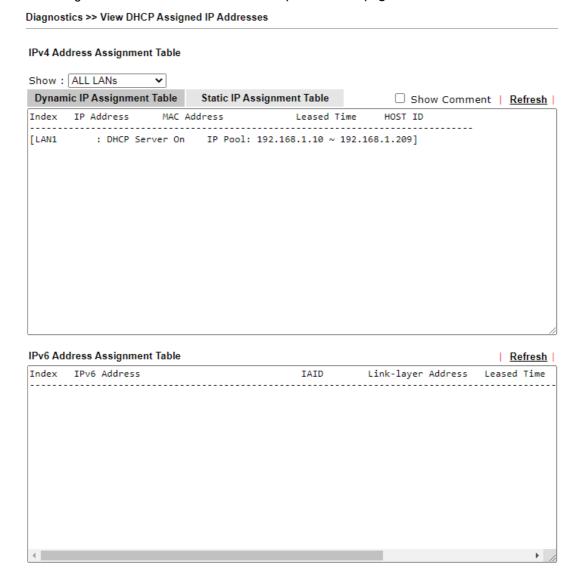

Item	Description
Refresh	Click it to reload the page with the most up-to-date information.

IX-1-5 DHCP Table

This page provides information on IP address assignments. This information is helpful in diagnosing network problems, such as IP address conflicts, etc.

Click Diagnostics and click DHCP Table to open the web page.

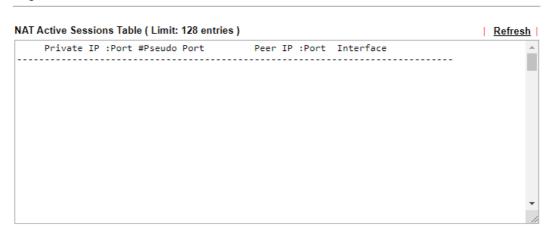

Item	Description
Index	Shows the index of the DHCP entry.
IP Address	Shows the IP address assigned by the router to the MAC address.
MAC Address	Shows the MAC address of this DHCP entry.
Leased Time	Shows the remaining time of the DHCP lease of the device.
HOST ID	Shows the host ID of this network device.
Refresh	Click to reload this page with the most up-to-date information.

IX-1-6 NAT Sessions Table

This screen shows the 128 newest entries in the NAT sessions table.

Click Diagnostics and click NAT Sessions Table to open the list page.

Diagnostics >> NAT Sessions Table

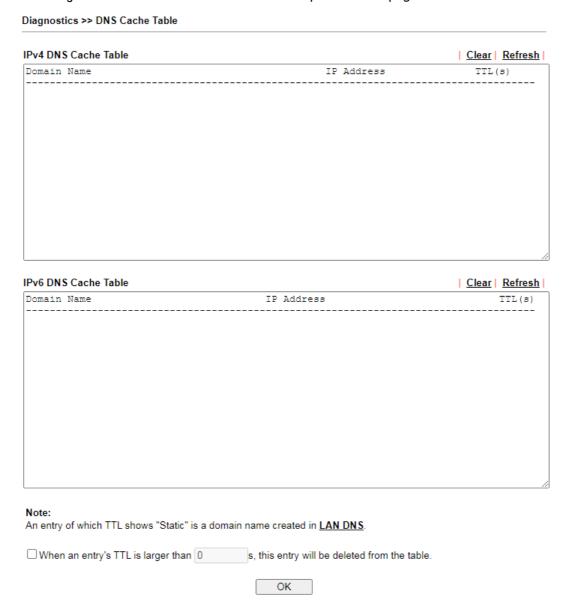

Item	Description
Private IP:	Shows the IP address of the LAN host.
Port #	Shows the port number used on the LAN host for this NAT session.
Pseudo Port	Shows the external port number used on the WAN interface for this NAT session.
Peer IP:	Shows the remote host's IP address.
Port	Shows the port number used on the remote host for this NAT session.
Interface	Shows the WAN interface used for this NAT session.
Refresh	Click to reload this page with the most up-to-date information.

IX-1-7 DNS Cache Table

The router can function as a DNS server which allows LAN clients to look up DNS information by sending DNS requests to the router. Such DNS information is temporarily cached on the router and can be viewed on this page.

Click Diagnostics and click DNS Cache Table to open the web page.

Item	Description
Clear	Click to clear all cached DNS lookup entries.
Refresh	Click it to reload the page.
When an entry's TTL is larger than	When this box is checked, DNS entries whose TTL (time to live, in seconds) exceeds the valued specified here will be deleted from the router's cache automatically. Be sure to click OK after making changes to have them saved.

IX-1-8 Ping Diagnosis

Click Diagnostics and click Ping Diagnosis to open the web page.

Diagnostics >> Ping Diagnosis

or

Diagnostics >> Ping Diagnosis

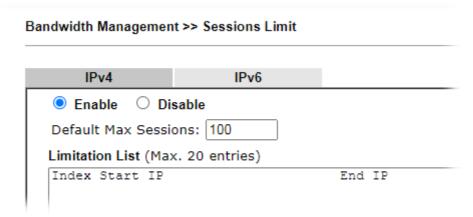

Item	Description
IPV4 /IPV6	Select the protocol to perform the ping operation.
Source IP	Choose Auto to be let the router select the WAN interface.
Ping to	Select the type of target to which you wish to ping.
IP Address	Enter the IP address of the Host/IP that you want to ping.
Ping IPv6 Address	Enter the IPv6 address that you want to ping.
Run	Click this button to initiate the ping process. The result will be displayed on the screen.
Clear	Click this link to clear the ping result.

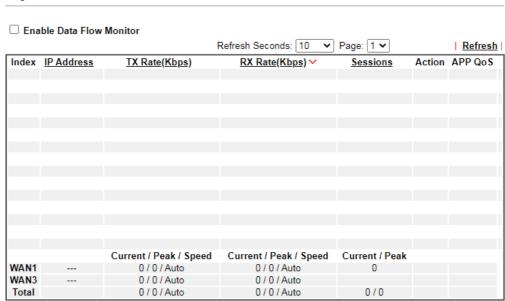

IX-1-9 Data Flow Monitor

Diagnostics >> Data Flow Monitor

This page displays the uplink and downlink rates, and number of sessions of each LAN client. The information is refreshed at an interval specified by the user. Before using the Data Flow Monitor, LAN clients that are to be monitored need to have their IP addresses configured in Bandwidth Management, and Bandwidth and Session Limits must be specified. Otherwise, a dialog box will appear reminding you to do so.

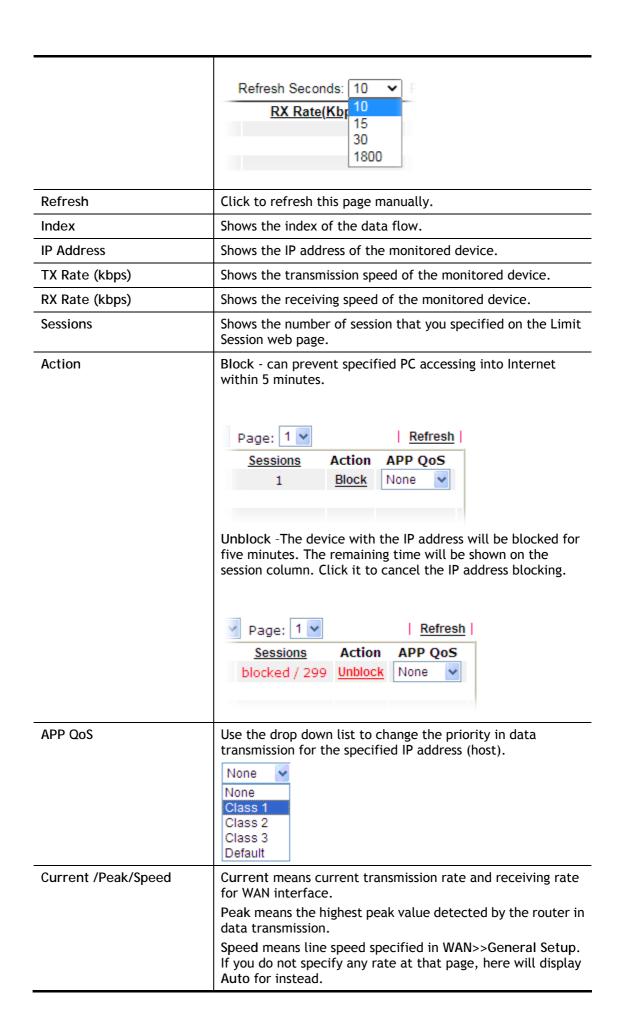

Click Diagnostics and click Data Flow Monitor to load the web page. You can click IP Address, TX rate, RX rate or Sessions links in the header to sort the displayed data.

Note:

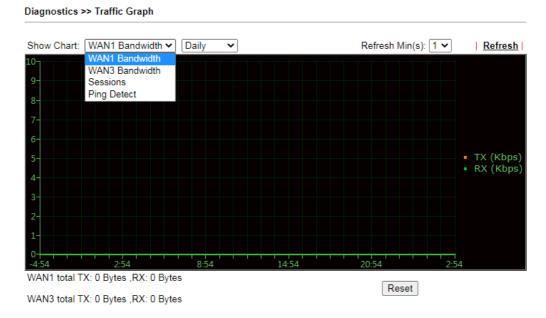

- 1. Click "Block" to prevent specified PC from surfing Internet for 5 minutes.
- The IP blocked by the router will be shown in red, and the session column will display the remaining time that the specified IP will be blocked.
- 3. When Date Flow Monitor is enabled, Hardware Acceleration will not work.
- 4. (Kbps): shared bandwidth
 - + : residual bandwidth used Current/Peak are average.

Item	Description
Enable Data Flow Monitor	Check this box to enable this function.
Refresh Seconds	Select the desired refresh time interval from the drop-down list. The page will then be refreshed with updated information at the selected interval.

IX-1-10 Traffic Graph

Click Diagnostics and click Traffic Graph to open the web page. Choose WAN1/ WAN3 Bandwidth, Sessions, Ping Detect, daily or weekly for viewing different traffic graph. Click Reset to zero the accumulated RX/TX (received and transmitted) data of WAN. Click Refresh to renew the graph at any time.

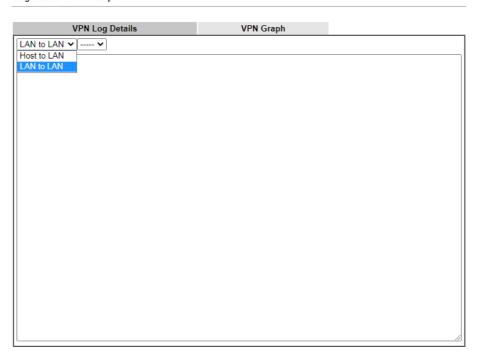

The horizontal axis represents time. Yet the vertical axis has different meanings. For WAN1/WAN3 Bandwidth chart, the numbers displayed on vertical axis represent the numbers of the transmitted and received packets in the past.

For Sessions chart, the numbers displayed on vertical axis represent the numbers of the NAT sessions during the past.

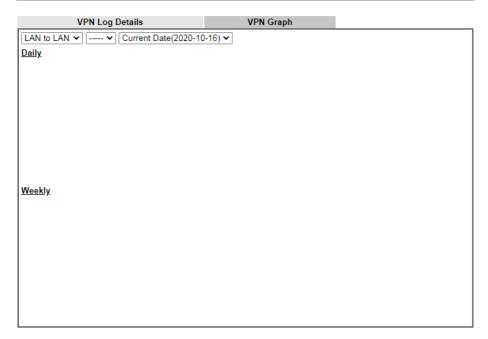

IX-1-11 VPN Graph

Click Diagnostics and click VPN Graph to open the web page.

Diagnostics >> VPN Graph

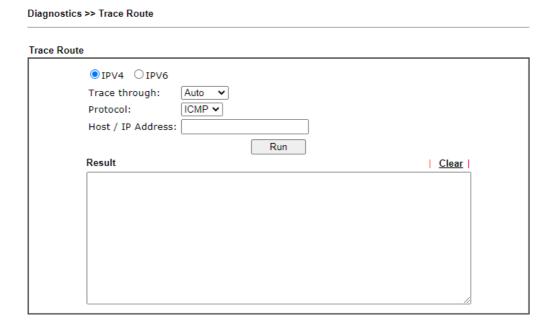

Diagnostics >> VPN Graph

IX-1-12 Trace Route

Click Diagnostics and click Trace Route to open the web page. This page allows you to trace the routes from router to the host. Simply Enter the IP address of the host in the box and click Run. The result of route trace will be shown on the screen.

or

Diagnostics >> Trace Route

Item	Description
IPv4 / IPv6	Select the IP version used to perform the trace route.
Trace through	Select the WAN interface used to perform the trace route.
Protocol	Select either UDP or ICMP used to perform the trace route.
Host/IP Address	Enter the hostname or the IP address of trace route destination.

Trace Host/IP Address	Enter the hostname or the IPv6 address of trace route destination.
Run	Click this button to start the trace.
Clear	Click to clear the trace route result.

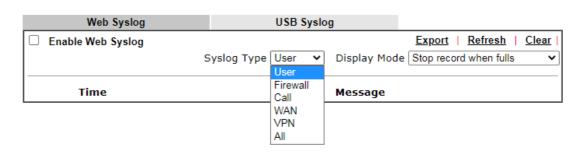

IX-1-13 Syslog Explorer

This page displays syslog information in real time. There are two options for displaying syslog information: Web Syslog and USB Syslog.

For Web Syslog

This page displays User/Firewall/call/WAN/VPN Syslog events and their time of occurrence. To enable Web Syslog, check the Enable Web Syslog checkbox, specify the type of Syslog events to view, and select the display mode. The log messages will start appearing as events matching the selected type occur.

Diagnostics >> Syslog Explorer

Item	Description
Enable Web Syslog	Check this box to enable Web Syslog.
Syslog Type	Select the type of Syslog info to monitor.
Export	Click to save the data as a file.
Refresh	Click to refresh this page manually.
Clear	Click to purge Syslog entries from the Web Syslog buffer.
Display Mode	Two display modes are available. Stop record when fulls Stop record when fulls Always record the new event Stop record when fulls - When the Web Syslog buffer is full, no further logging will be performed. Always record the new event - Events are recorded in a FIFO manner. As the buffer gets full, oldest events are purged to make room for new events.
Time	Displays the time when the event occurred.
Message	Displays the event information.

For USB Syslog

This page displays the syslog recorded on the USB storage disk.

Diagnostics >> Syslog Explorer

Web Sy	slog	USB Syslog		
Note: The syslog will show	w while the saved s	syslog file is full.		
File: n/a		Page: n/a	Log Type: n/a	
Time	Log Type		Message	

Available settings are explained as follows:

Item	Description
Time	Displays the time of the event occurred.
Log Type	Displays the type of the record.
Message	Displays the information for each event.

IX-1-14 IPv6 TSPC Status

IPv6 TSPC (Tunnel Setup Protocol Client) status page could help you diagnose issues with IPv6 connections that utilize TSP.

If TSPC is configured properly, the router will display the following when the router has connected to the tunnel broker successfully.

Diagnostics >> IPv6 TSPC Status

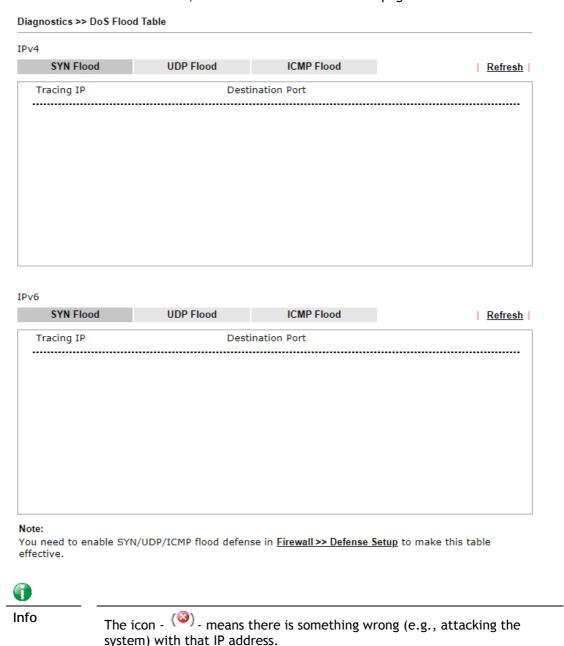

WAN1	WAN3		Refresh
TSPC En	abled		
TSPC Co	nnection Status		
Local E	ndpoint v4 Address :	114.44.54.220	
Local E	ndpoint v6 Address :	2001:05c0:1400:000b:0000:0000:0000:10b9	
Router	DNS name :	88886666.broker.freenet6.net	
Remote	Endpoint v4 Address :	81.171.72.11	
Remote	Endpoint v6 Address:	2001:05c0:1400:000b:0000:0000:0000:10b8	
Tspc Pr	efix:	2001:05c0:1502:0d00:0000:0000:0000:0000	
Tspc Pr	efixlen :	56	
Tunnel	Broker:	amsterdam.freenet6.net	
Tunnel	Status :	Connected	

Item	Description
Refresh	Click to refresh the page to show the latest status.
WAN1 / WAN3	Select the tab that corresponds to the WAN connection that you wish to view the IPv6 TSPC status.

IX-1-15 DoS Flood Table

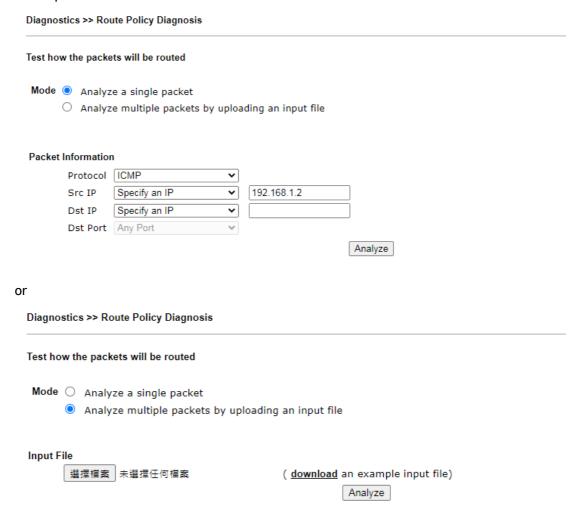

This page shows IP addresses that are currently engaging in DoS flood as detected by the DoS Flooding Defense mechanism. It provides useful information to network engineers (e.g., MIS engineers) to diagnose the network environment to identify potentially malicious network traffic and entities. Identified IP addresses and the destination ports used in SYN, UDP, and ICMP Flood attacks will be shown on the respective tab pages.

IP addresses that are suspected to be attacking the network can be blocked by clicking the Block button on the SYN Flood, UDP Flood and ICMP Flood tab pages.

IX-1-16 Route Policy Diagnosis

With the analysis done by such page, possible path (static route, routing table or policy route) of the packets sent out of the router can be traced.

Item	Description
Mode	Analyze a single packet - Choose such mode to make Vigor router analyze how a single packet will be sent by a route policy.
	Analyze multiple packets Choose such mode to make Vigor router analyze how multiple packets in a specified file will be sent by a route policy.
Packet Information	Specify the nature of the packets to be analyzed by Vigor router. ICMP/UDP/TCP/ANY- Specify a protocol for diagnosis. Src IP - Type an IP address as the source IP. Dst IP - Type an IP address as the destination IP. Dst Port - Use the drop down list to specify the destination

port. Analyze - Click it to perform the job of analyzing. The analyzed result will be shown on the page.. Input File It is available when Analyze multiple packets.. is selected as Mode. Select - Click the download link to get a blank example file. Then, click such button to select that blank ".csv" file for saving the result of analysis. o analyze how a packet will be sent ● ana 下載工作確認 Input File diagnose_example_input_file.csv 選擇檔案 402 B Analyze 儲存至 下載 ▼ 🛅 下載後開啓 取消 Analyze - Click it to perform the job of analyzing. The analyzed result will be shown on the page. If required, click export analysis to export the result as a file.

| No Match
| CMP | 192.168.1.20 | 20.20.20.20 | 5060 | No Match | N/A | No Match | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A |

Note that the analysis was based on the current "load-balance/route policy" settings, we do not guarantee it will be 100% the same as the real case.

IX-2 Checking If the Hardware Status Is OK or Not

Follow the steps below to verify the hardware status.

- 1. Check the power line and WLAN/LAN cable connections. Refer to "I-2 Hardware Installation" for details.
- 2. Turn on the router. Make sure the ACT LED blink once per second and the correspondent LAN LED is bright.

3. If not, it means that there is something wrong with the hardware status. Simply back to "I-2 Hardware Installation" to execute the hardware installation again. And then, try again.

IX-3 Checking If the Network Connection Settings on Your Computer Is OK or Not

Sometimes the link failure occurs due to the wrong network connection settings. After trying the above section, if the link is stilled failed, please do the steps listed below to make sure the network connection settings is OK.

For Windows

Info

The example is based on Windows 7. As to the examples for other operation systems, please refer to the similar steps or find support notes in www.DrayTek.com.

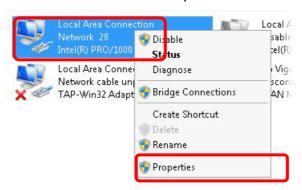

1. Open All Programs>>Getting Started>>Control Panel. Click Network and Sharing Center.

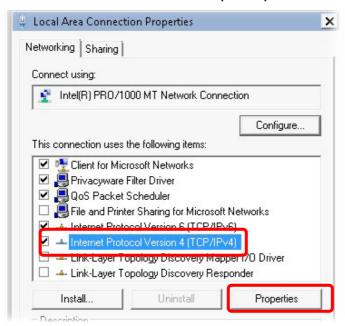

2. In the following window, click Change adapter settings.

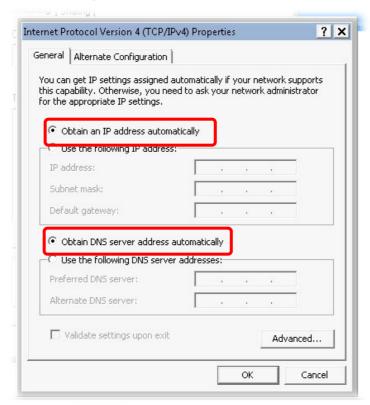

3. Icons of network connection will be shown on the window. Right-click on Local Area Connection and click on Properties.

4. Select Internet Protocol Version 4 (TCP/IP) and then click Properties.

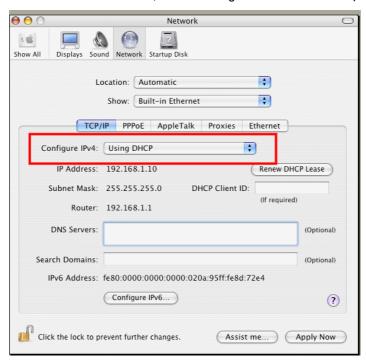

5. Select Obtain an IP address automatically and Obtain DNS server address automatically. Finally, click OK.

For Mac OS

- 1. Double click on the current used Mac OS on the desktop.
- 2. Open the Application folder and get into Network.
- 3. On the Network screen, select Using DHCP from the drop down list of Configure IPv4.

IX-4 Pinging the Router from Your Computer

The default gateway IP address of the router is 192.168.1.1. For some reason, you might need to use "ping" command to check the link status of the router. The most important thing is that the computer will receive a reply from 192.168.1.1. If not, please check the IP address of your computer. We suggest you setting the network connection as get IP automatically. (Please refer to the previous section IX-3)

Please follow the steps below to ping the router correctly.

For Windows

- 1. Open the Command Prompt window (from Start menu> Run).
- 2. Enter cmd. The DOS command dialog will appear.

```
Microsoft Windows XP [Version 5.1.2600]
(C) Copyright 1985-2001 Microsoft Corp.

D:\Documents and Settings\fae\ping 192.168.1.1

Pinging 192.168.1.1 with 32 bytes of data:

Reply from 192.168.1.1: bytes=32 time\fms ITL=255

Ping statistics for 192.168.1.1:

Packets: Sent = 4, Received = 4, Lost = 0 (0% loss),

Approximate round trip times in milli-seconds:

Minimum = 0ms, Maximum = 0ms, Average = 0ms

D:\Documents and Settings\fae\_
```

- 3. Enter ping 192.168.1.1 and press [Enter]. If the link is OK, the line of "Reply from 192.168.1.1:bytes=32 time<1ms TTL=255" will appear.
- 4. If the line does not appear, please check the IP address setting of your computer.

For Mac OS (Terminal)

- 1. Double click on the current used MacOs on the desktop.
- 2. Open the Application folder and get into Utilities.
- 3. Double click Terminal. The Terminal window will appear.
- 4. Enter ping 192.168.1.1 and press [Enter]. If the link is OK, the line of "64 bytes from 192.168.1.1: icmp_seq=0 ttl=255 time=xxxx ms" will appear.

```
000
                          Terminal - bash - 80x24
                                                                               S
Last login: Sat Jan 3 02:24:18 on ttyp1
Welcome to Darwin!
Vigor10:~ draytek$ ping 192.168.1.1
PING 192.168.1.1 (192.168.1.1): 56 data bytes
64 bytes from 192.168.1.1: icmp_seq=0 ttl=255 time=0.755 ms
64 bytes from 192.168.1.1: icmp_seq=1 ttl=255 time=0.697 ms
64 bytes from 192.168.1.1: icmp_seq=2 ttl=255 time=0.716 ms
64 bytes from 192.168.1.1: icmp_seq=3 ttl=255 time=0.731 ms
64 bytes from 192.168.1.1: icmp_seq=4 ttl=255 time=0.72 ms

5 packets transmitted, 5 packets received, 0% packet loss
round-trip min/avg/max = 0.697/0.723/0.755 ms
Vigor10:~ draytek$
```

IX-5 Checking If the ISP Settings are OK or Not

If WAN connection cannot be up, check if the LEDs (according to the LED explanations listed on section I-1-1, Indicators and Connectors) are correct or not. If the LEDs are off, please:

- Change the Physical Type from Auto negotiation to other values (e.g., 100M full duplex).
- Next, change the physical type of modem (e.g., DSL/FTTX(GPON)/Cable modem) offered by ISP with the same value configured in Vigor router. Check if the LEDs on Vigor router are on or not.
- If not, please install an additional switch for connecting both Vigor router and the modem offered by ISP. Then, check if the LEDs on Vigor router are on or not.
- If the problem of LEDs cannot be solved by the above measures, please contact with the nearest reseller, or send an e-mail to DrayTek FAE for technical support.
- Check if the settings offered by ISP are configured well or not.

When the LEDs are on and correct, yet the WAN connection still cannot be up, please:

 Open WAN >> Internet Access page and then check whether the ISP settings are set correctly. Click Details Page of WAN1~WAN6 to review the settings that you configured previously.

WAN >> Internet Access Internet Access Index Display Name Physical Mode Access Mode WAN1 Static or Dynamic IP Details Page | IPv6 Ethernet USB WAN3 None Details Page | IPv6 ~ DHCP Client Option

IX-6 Problems for 3G/4G Network Connection

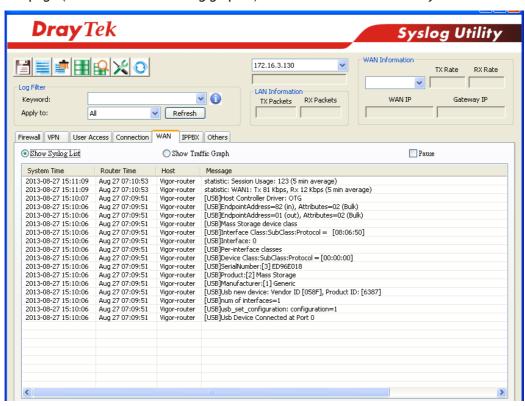

When you have trouble in using 3G/4G network transmission, please check the following:

Check if USB LED lights on or off

You have to wait about 15 seconds after inserting 3G/4G USB Modem into your Vigor2135. Later, the USB LED will light on which means the installation of USB Modem is successful. If the USB LED does not light on, please remove and reinsert the modem again. If it still fails, restart Vigor2135.

USB LED lights on but the network connection does not work

Check the PIN Code of SIM card is disabled or not. Please use the utility of 3G/4G USB Modem to disable PIN code and try again. If it still fails, it might be the compliance problem of system. Please open DrayTek Syslog Tool to capture the connection information (WAN Log) and send the page (similar to the following graphic) to the service center of DrayTek.

Transmission Rate is not fast enough

Please connect your Notebook with 3G/4G USB Modem to test the connection speed to verify if the problem is caused by Vigor2135. In addition, please refer to the manual of 3G/4G USB Modem for LED Status to make sure if the modem connects to Internet via HSDPA mode. If you want to use the modem indoors, please put it on the place near the window to obtain better signal receiving.

IX-7 Backing to Factory Default Setting If Necessary

Sometimes, a wrong connection can be improved by returning to the default settings. Try to reset the router by software or hardware. Such function is available in Admin Mode only.

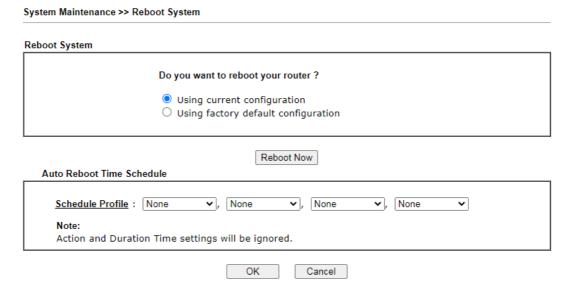

Info

After pressing factory default setting, you will loose all settings you did before. Make sure you have recorded all useful settings before you pressing. The password of factory default is null.

Software Reset

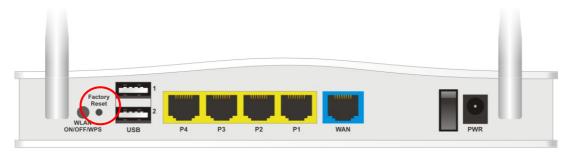

You can reset the router to factory default via Web page. Such function is available in Admin Mode only.

Go to System Maintenance and choose Reboot System on the web page. The following screen will appear. Choose Using factory default configuration and click Reboot Now. After few seconds, the router will return all the settings to the factory settings.

Hardware Reset

While the router is running (ACT LED blinking), press the Factory Reset button and hold for more than 5 seconds. When you see the ACT LED blinks rapidly, please release the button. Then, the router will restart with the default configuration.

After restore the factory default setting, you can configure the settings for the router again to fit your personal request.

IX-8 Contacting DrayTek

If the router still cannot work correctly after trying many efforts, please contact your dealer for further help right away. For any questions, please feel free to send e-mail to support@DrayTek.com.

Part X Telnet Commands

Accessing Telnet of Vigor2135

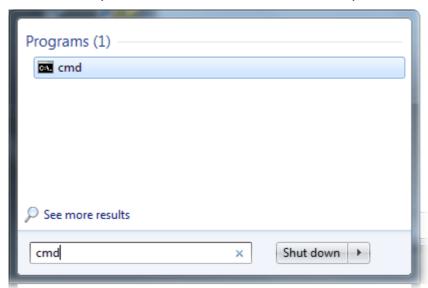

This chapter also gives you a general description for accessing telnet and describes the firmware versions for the routers explained in this manual.

Info

For Windows 7 user, please make sure the Windows Features of Telnet Client has been turned on under Control Panel>>Programs.

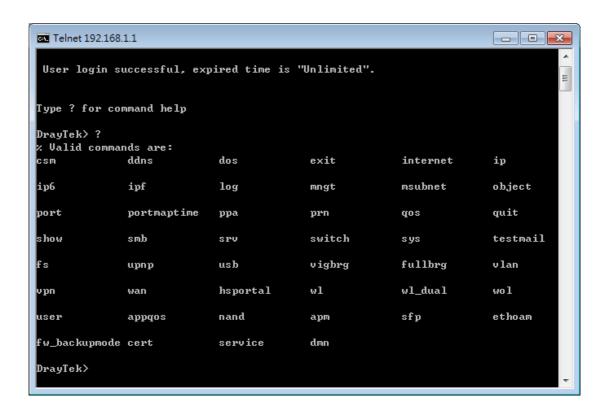

Enter cmd and press Enter. The Telnet terminal will be open later.

In the following window, type TeInet 192.168.1.1 as below and press Enter. Note that the IP address in the example is the default address of the router. If you have changed the default, enter the current IP address of the router.

Next, enter admin/admin for Account/Password. Then, enter?. You will see a list of valid/common commands depending on the router that your use.

Telnet Command: csm appe prof

Commands under CSM allow you to set CSM profile to define policy profiles for different policy of IM (Instant Messenger)/P2P (Peer to Peer) application.

"csm appe prof" is used to configure the APP Enforcement Profile name. Such profile will be applied in Default Rule of Firewall>>General Setup for filtering.

Syntax

csm appe prof -i INDEX <-v | -n NAME | setdefault >

Syntax Description

Parameter	Description
INDEX	It means to specify the index number of CSM profile, from 1 to 32.
- V	It means to view the configuration of the CSM profile.
- n	It means to set a name for the CSM profile.
NAME	It means to specify a name for the CSM profile, less then 15 characters.
setdefault	Reset to default settings.

Example

```
> csm appe prof -i 1 -n games
The name of APPE Profile 1 was setted.
```

Telnet Command: csm appe set

It is used to configure group settings for IM/P2P/Protocol and Others in APP Enforcement Profile.

csm appe set -i INDEX <-v GROUP/ -e AP_IDX / -d AP_IDX>

Parameter	Description
INDEX	Specify the index number of CSM profile, from 1 to 32.
- <i>v</i>	View the IM/P2P/Protocol and Others configuration of the CSM profile.
-е	Enable to block specific application.
-d	Disable to block specific application.
-a	Set the action of specific application
GROUP	Specify the category of the application. Available options are: IM, P2P, Protocol and Others.
AP_IDX	Each application has independent index number for identification in CLI command.
	Specify the index number of the application here. If you have no
	idea of the inex number, do the following (Take IM as an example):
	Type "csm appe set -I 1 -v IM", the system will list all of the index

> csm appe	set -i 1 -v	IM		
	Index		Version	
IM	0	AIM Login	8	
IM	1	AliWW	2008	
IM	2	Ares	2.0.9	
IM	3	BaiduHi	37378	
IM	4	Facebook/Instagram	ı	
IM	5	Fetion	2010	
IM	6	GaduGadu Protocol		
IM	7	ICQ	7	
IM	8	iSpQ	8.0.60	
IM	9	KC	2008	
IM	10	LINE	5.23.0.2134	
IM	11	LinkedIn		
IM	12	Paltalk	9	
IM	13	PocoCall	2007	
IM	14	Qnext	3.0.1	
IM	15	Signal	1.26.2	
IM	16	Slack	4.0.0	
IM	17	Snapchat	10.79.5.0	
IM	18	Telegram	1.7.10	
IM	19	Tencent QQ	2012/2009 beta3	
> csm appe	set -i 3 -d	2		
>				

Telnet Command: csm appe show

It is used to display group (IM/P2P/Protocol and Others) information APP Enforcement Profile. csm appe show <-a/-i/-p/-t/-m>

Syntax Description

Parameter	Description
-a	View the configuration status for All groups.
-i	View the configuration status of IM group.
-p	View the configuration status of P2P group.
-t	View the configuration status of protocol group.
-m	View the configuration status of Others group.

Example

PROTOCOL	54	FTP		
PROTOCOL	55	HTTP	1.1	
PROTOCOL	56	IMAP	4.1	
PROTOCOL	57	IMAP STARTTLS	4.1	
PROTOCOL	58	IRC	2.4.0	

Telnet Command: csm appe config

It is used to display the configuration status (enabled or disabled) for IM/P2P/Protocol/Other applications.

csm appe config -v INDEX <-i/-p/-t/-m>

Syntax Description

Parameter	Description
INDEX	Specify the index number of CSM profile, from 1 to 32.
-i	View the configuration status of IM group.
- <i>р</i>	View the configuration status of P2P group.
-t	View the configuration status of protocol group.
-m	View the configuration status of Others group.

Example

> csm appe co	nfig -v 1 -m				
Group		Index			
OTHERS			CloudFlare		
OTHERS	Tunneling	74	DNSCrypt	Disable	
OTHERS	Tunneling	75	DynaPass	Disable	
OTHERS	Tunneling	76	FreeGate	Disable	
OTHERS	Tunneling	77	Hotspot Shield	Disable	
OTHERS	Tunneling	78	HTTP Proxy	Disable	
OTHERS	Tunneling	79	HTTP Tunnel	Disable	
OTHERS	Tunneling	80	LogMeIn Hamachi	Disable	
OTHERS	Tunneling	81	MS Teredo	Disable	
OTHERS	Tunneling	82	OpenDNS	Disable	
OTHERS	Tunneling	83	OpenVPN	Disable	
OTHERS	Tunneling	84	PGPNet	Disable	
Total 81 APPs					
>					

Telnet Command: csm appe interface

Syntax Description

Parameter	Description
AUTO	Vigor router specifies WAN interface automatically.
WAN	Specify the WAN interface for signature downloading.

Example

```
> csm appe interface wan1
Download interface is set as "WAN1" now.
> csm appe interface auto
Download interface is set as "auto-selected" now.
```

Telnet Command: csm appe email

It is used to set notification e-mail for APPE signature based on the settings configured in System Maintenance>>SysLog/Mail Alert Setup (in which, the box of APPE Signature is checkd under Enable E-Mail Alert).

csm appe email <-e/-d/-s>

Syntax Description

Parameter	Description
-e	Enable notification e-mail mechanism.
-d	Disable notification e-mail mechanism.
-S	Send an example e-mail.

Example

```
> csm appe email -e
Enable APPE email.
```

Telnet Command: csm ucf

It is used to configure settings for URL control filter profile.

Syntax

```
csm ucf show
csm ucf setdefault
csm ucf msg MSG
csm ucf obj INDEX <-n PROFILE\_NAME \mid -I [P/B/A/N] \mid uac \mid wf >
csm ucf obj INDEX -n < PROFILE\_NAME >
csm ucf obj INDEX -p < VALUE >
csm ucf obj INDEX -l < P/B/A >
csm ucf obj INDEX uac
csm ucf obj INDEX uac
```

Syntax Description

Parameter	Description
show	It means to display all of the profiles.
setdefault	It means to return to default settings for all of the profile.
msg MSG	It means de set the administration message. MSG means the content (less than 255 characters) of the message itself.
obj	It means to specify the object for the profile.
INDEX	It means to specify the index number of CSM profile, from 1 to 8.
-n <profile_name></profile_name>	It means to set the profile name. PROFILE_NAME: specify the name of the profile (less than 16 characters.
-p <value></value>	Set the priority (defined by the number specified in VALUE) for the profile. VALUE: Number 0 to 3 represent different conditions. 0: It means Bundle: Pass. 1: It means Bundle: Block. 2: It means Either: URL Access Control First. 3: It means Either: Web Feature First.
-I P/B/A	It means the log type of the profile. They are: P: Pass, B: Block, A: All
uac	It means to set URL Access Control part.
wf	It means to set Web Feature part.

Example

```
> csm ucf obj 1 -n game -l B
Profile Index: 1    Profile Name:[game]
> csm ucf show
URL Content Filter Profile Table:
Profile Name Profile Name
     [game ] [5] [
[1]
               ] [6] [
] [7] [
[2] [
[3] [
                                    ]
                                     ]
[4]
                ] [8]
Administration Message (Max 255 characters):
_____

er.Please contact your system administrator for further
information.</center>
</body>
```

Telnet Command: csm ucf obj INDEX uac

It means to configure the settings regarding to URL Access Control (uac).

Syntax

```
csm ucf obj INDEX uac -v
csm ucf obj INDEX uac -e
csm ucf obj INDEX uac -d
csm ucf obj INDEX uac -a <P/B>
csm ucf obj INDEX uac -i <E/D>
csm ucf obj INDEX uac -o <KEY_WORD_Object_Index>
csm ucf obj INDEX uac -g <KEY_WORD_Group_Index>
```

Syntax Description

Parameter	Description
INDEX	It means to specify the index number of CSM profile, from 1 to 8.
- V	It means to view the protocol configuration of the CSM profile.
-e	It means to enable the function of URL Access Control.
-d	It means to disable the function of URL Access Control.
-a P/B	Set the action of specific application, P or B.
	B: Block. The web access meets the URL Access Control will be blocked.
	P: Pass. The web access meets the URL Access Control will be passed.
-i E D	Prevent the web access from any IP address. E: Enable the function. The Internet access from any IP address will be blocked. D: Disable the function.
-o < KEY_WORD_Object_Index>	Set the keyword object. KEY_WORD_Object_Index: Specify the index number of the object profile.
-g <key_word_group_index></key_word_group_index>	Set the keyword group. KEY_WORD_Group_Index: Specify the index number of the group profile.

Example

Telnet Command: csm ucf obj INDEX wf

It means to configure the settings regarding to Web Feature (wf).

Syntax

```
csm ucf obj INDEX wf -v
csm ucf obj INDEX wf -e
csm ucf obj INDEX wf -d
csm ucf obj INDEX wf -a <P/B>
csm ucf obj INDEX wf -s <WEB_FEATURE>
csm ucf obj INDEX wf -u <WEB_FEATURE>
csm ucf obj INDEX wf -f <File_Extension_Object_index>
```

Syntax Description

Parameter	Description
INDEX	It means to specify the index number of CSM profile, from 1 to 8.
- V	It means to view the protocol configuration of the CSM profile.
-e	It means to enable the restriction of web feature.
-d	It means to disable the restriction of web feature.
-a P/B	Set the action of web feature, P or B.
	B: Block. The web access meets the web feature will be blocked.
	P: Pass. The web access meets the web feature will be passed.
-s < WEB_FEATURE>	It means to enable the the Web Feature configuration.
	WEB_FEATURE: Features available for configuration are:
	c: Cookie
	p: Proxy
	u: Upload
-u < WEB_FEATURE>	It means to cancel the web feature configuration.
	WEB_FEATURE: Features available for configuration are:
	c: Cookie
	p: Proxy
	u: Upload
-f <	It means to set the file extension object index number.
File_Extension_Object_inde	File_Extension_Object_index: Enter the index number (1 to 8) for
X>	the file extension object.

Example

Telnet Command: csm wcf

It means to configure the settings regarding to web control filter (wcf).

Syntax

csm wcf show

csm wcf look

csm wcf cache

csm wcf server WCF_SERVER

csm wcf msg <MSG>

csm wcf setdefault

csm wcf obj INDEX -v

csm wcf obj INDEX -a <P/B>

csm wcf obj INDEX -n <PROFILE_NAME>

csm wcf obj //NDEX -1 <N/P/B/A>

csm wcf obj INDEX -o <KEY_WORD Object Index>

csm wcf obj INDEX -g <KEY_WORD Group Index>

csm wcf obj INDEX - w < E/D/P/B >

csm wcf obj INDEX -s <CATEGORY/WEB_GROUP>

csm wcf obj //NDEX -u <CATEGORY/WEB_GROUP>

Parameter	Description
show	It means to display the web content filter profiles.
look	It means to display the license information of WCF.
cache	It means to set the cache level for the profile.
server WCF_SERVER	It means to set web content filter server.
msg <msg></msg>	It means de set the administration message.
· ·	MSG: Enter the content (less than 255 characters) of the message
	itself.
setdefault	It means to return to default settings for all of the profile.
Obj <index></index>	It means to specify the object profile.
•	INDEX: It means to specify the index number of web content filter
	profile, from 1 to 8.
- V	It means to view the web content filter profile.
-a <p b=""></p>	Set the action of web content filter profile, P or B.
·	B: Block. The web access meets the web feature will be blocked.
	P: Pass. The web access meets the web feature will be passed.
-n <profile_name></profile_name>	It means to set the profile name.
	<pre><profile_name>: specify the name of the profile (less than 16</profile_name></pre>
	characters.
-I <n a="" b="" p=""></n>	It means the log type of the profile. They are:
	P: Pass,
	B: Block,
	A: All,
	N: None
-0 <	Set the keyword object.
KEY_WORD_Object_Index>	KEY_WORD_Object_Index: Specify the index number of the object
	profile.
<i>-g</i> <	Set the keyword group.
KEY_WORD_Group_Index>	KEY_WORD_Group_Index: Specify the index number of the group
	profile.
-W < E/D/P/B >	It means to set the action for the black and white list.
	E:Enable,
	D:Disable,
	P:Pass,
	B:Block
-s <category web_group="" =""></category>	It means to choose the items under CATEGORY or WEB_GROUP.
	<pre><category>: Child_Protection, Leisure, Business, Chating,</category></pre>
	Computer Internet, Other
	<pre><web_group>: Includes: "Advertisement 6 Pen Use" "Alcohol 6 Tehasse" "Apanymizers"</web_group></pre>
	"Advertisement & Pop-Ups", "Alcohol & Tobacco", "Anonymizers", "Arts", "Business", "Transportation", "Chat", "Forums & Newsgroups",
	"Compromised", "Computers & Technology", "Criminal & Activity",
	Dating & Personals", "Down sites", "Education", "Entertainment",

Telnet Command: ddns enable

Enable/disable the DDNS service.

Syntax Description

Parameter	Description
Enable <0/1>	Enable or disable DDNS service.
	1: enable.
	0: disable.

Example

```
> ddns enable 1
Enable Dynamic DNS Setup
>
```

Telnet Command: ddns set

This command allows users to set Dynamica DNS account.

Syntax

586

Parameter	Description
-i <value></value>	It means index number of Dynamic DNS Account.
	<value>=1~6</value>
-E <value></value>	It means to enable /disable Dynamic DNS Account.
	<value>=0~1</value>
	0: Disable
	1: Enable
-W <value></value>	It means to specify WAN Interface.
	<value>=1~4</value>
	1: WAN1 First
	2: WAN1 Only
	3: WAN2 First
	example: To set WAN Interface: WAN1 First
-L <value></value>	It means to type Login Name.
	[value]: limit up to 64 characters
-P <value></value>	It means to type Password.
	[value]: limit up to 24 characters
-C <value></value>	It means to enable /disable Wildcards.
	<value>=0~1</value>
	0: Disable
D. stalina	1: Enable
-B <value></value>	It means to enable / disable Backup MX. <value>=0~1</value>
	0: Disable
	1: Enable
-M <value></value>	It means to type Mail Extender.
-ivi <value></value>	[value]: limit up to 60 characters
-R <value></value>	It means to type Determine Real WAN IP.
-k <value></value>	<pre></pre> <pre><value>=0~1</value></pre>
	0: WAN IP,
	1: Internet IP
-S <value></value>	It means to specify Servive Provider.
-3 \varue>	If user want to set User-Defined page, value must select 1.
	<pre><value>= 1~19</value></pre>
	1: User-Defined
	2: 3322 DDNS (www.3322.org)
	3: ChangelP.com (www.changeip.com)
	4: ddns.com.cn (www.ddns.com.cn)

	12: OVH (www.ovh.com)
	13: Strato (www.strato.eu)
	14: TwoDNS (www.twodns.de)
	15: TZO (www.tzo.com)
	16: ubddns.org (ubddns.org)
	17: Viettel DDNS (vddns.vn)
	18: vigorddns.com (www.vigorddns.com)
	19: ZoneEdit DDNS (dynamic.zoneedit.com)
T <value></value>	It means to type Servive Type.
	<value>= 1~3</value>
	1: Dynamic
	2: Custom
	3: Static
-D <host name=""> <sub do<="" td=""><td></td></sub></host>	
Name>	i.e: Account index 1 setting Domain Name for Dynamic Service
	Туре
	>> ddns set -i 1 -T 1 -D "host ddns.com.cn"
	i.e: Account index 2 setting Domain Name for Custom Service Type

	discrete in The Distriction of the Control of the C
	>> ddns set -i 2 -T 2 -D "domain name"
	i.e: Account index 3 setting Domain Name for Static Service Type
	>> ddns set -i 3 -T 3 -D "domain name"
-H <value></value>	It means to type User-Defined Provider Host.
	<value>= limit up to 64 characters</value>
-A <value></value>	It means to type User-Defined Service API.
	<value>= limit up to 256 characters</value>
-a <value></value>	It means to type User-Defined Auth Type.
	<value>=0~1</value>
	0: basic
	1: URL
-N <value></value>	It means to type User-Defined Connection Type.
	<value>=0~1</value>
	0: Http
	1: Https
-0 <value></value>	It means to type User-Defined Server Response.
	<value>: limit up to 32 characters</value>

```
> ddns set -i 1 -S 6 -T 1 -D "hostname dnsalias.net" -L user1 -P pwd1 > Save OK >
```

Telnet Command: ddns log

Displays the DDNS log.

Example

```
>ddns log
>
```

Telnet Command: ddns time

Sets and displays the DDNS time.

Syntax

ddns time <update in minutes>

Syntax Description

Parameter	Description
Update in minutes	Enter the value as DDNS time. The range is from 1 to 14400.

Example

```
> ddns time
ddns time <update in minutes>
Valid: 1 ~ 1440
%Now: 1440
> ddns time 1000
ddns time <update in minutes>
Valid: 1 ~ 1440
%Now: 1000
```

Telnet Command: ddns forceupdate

This command will update DDNS automatically.

```
> ddns forceupdate
Now updating DDNS ...
Please check result by using command "ddns log"
```

Telnet Command: ddns setdefault

This command will return DDS with factory default settings.

Example

```
> ddns setdefault
>Set to Factory Default.
```

Telnet Command: ddns show

This command allows users to check the content of selected DDNS account.

Syntax

ddns show -i < value>

Syntax Description

Parameter	Description
-i <value></value>	Display the content of selected DDNS account by entering the index number of the account. <value>=1~6</value>

Example

Telnet Command: dos

This command allows users to configure the settings for DoS defense system.

Syntax

```
dos <-V | D | A>
dos -s <ATTACK_F> <THRESHOLD> <TIMEOUT>
dos -a | e <ATTACK_F> <ATTACK_O> | d <ATTACK_F> <ATTACK_O>>
dos -o <LOG_TYPE> | p <LOG_TYPE> | I <LOG_TYPE>
dos -P <add4/remove4> <type> <value> | <add6/remove6> <type> <value> | <show> | remove4 all | remove6 all>
dos -B <add4/remove4> <type> <value> | <add6/remove6> <type> <value> | <show> | remove4 all | remove6 all>
```

Parameter	Description
-V	It means to view the configuration of DoS defense system.
-D	It means to deactivate the DoS defense system.
-A	It means to activate the DoS defense system.
-s <attack_f> <threshold> <timeout></timeout></threshold></attack_f>	It means to enable the defense function for a specific attack and set its parameter(s). <attack_f>: Specify the name of flooding attack(s) or portscan, e.g., synflood, udpflood, icmpflood, or postscan. <threshold>: It means the packet rate (packet/second) that a flooding attack will be detected. Set a value larger than 20. <timeout>: It means the time (seconds) that a flooding attack will be blocked. Set a value larger than 5.</timeout></threshold></attack_f>
-a /- e <attack_f><attack_0></attack_0></attack_f>	It means to enable the defense function for all attacks or a specific attack listed in ATTACK_0. <attack_f>: Specify the name of flooding attack(s) or portscan, e.g., synflood, udpflood, icmpflood, or postscan. <attack_0>: It means to specify a name of the following attacks: ip_option, tcp_flag, land, teardrop, smurf, pingofdeath, traceroute, icmp_frag, syn_frag, unknow_proto, fraggle.</attack_0></attack_f>
-d <attack_f><attack_0></attack_0></attack_f>	It means to disable the defense function for a specific attack(s). <attack_f>: Specify the name of flooding attack(s) or portscan, e.g., synflood, udpflood, icmpflood, or postscan. <attack_0>: It means to specify a name of the following attacks: ip_option, tcp_flag, land, teardrop, smurf, pingofdeath, traceroute, icmp_frag, syn_frag, unknow_proto, fraggle.</attack_0></attack_f>
-P <add4 remove4=""> <type> <value> <add6 remove6=""> <type> <value> <show> remove4 all remove6 all></show></value></type></add6></value></type></add4>	Add or remove the IPv4/IPv6 address in the white passing IP list. add4/remove4: Add /remove an IPv4/IPv6 address to/from the whitelist. add6/remove6: Add/remove an IPv6 address to/from the whitelist. Type: Two types, -i and -c. In which, "-i" means the IPv4 address and "-c" means the country object. Value: Enter the IP address for -i; enter the index number of the country object profile. Show: Display the whitelist.
-B <add4 remove4=""> <type> <value> <add6 remove6=""> <type> <value> <show> remove4 all remove6 all></show></value></type></add6></value></type></add4>	Add or remove the IPv4/IPv6 address in the black blocking IP list. add4/remove4: Add /remove an IPv4/IPv6 address to/from the blacklist. add6/remove6: Add/remove an IPv6 address to/from the blacklist. Type: Two types, -i and -c. In which, "-i" means the IPv4 address and "-c" means the country object. Value: Enter the IP address for -i; enter the index number of the country object profile. Show: Display the blacklist.
dos -o <log_type></log_type>	Enable/Disable dos defense log. <log_type>: Enter 0 or 1. 0: Disable 1: Enable</log_type>
dos -p <log_type></log_type>	Enable/Disable spoofing defense log. <log_type>: Enter 0 or 1. 0: Disable 1: Enable</log_type>
dos -I <log_type></log_type>	Enable/Disable dos defense black/white list log. <log_type>: Enter 0 to 3. 0: None 1: White list 2: Black List 3: All</log_type>
dos -f <0/1/show>	Set priority of Whitelist/Blacklist. 0:WhiteList

	1:BlackList
dos -i <1/2/3/4/show>	Set Whitelist/Blacklist log sending time interval(seconds).
	1:30
	2:60
	3:180
	4:300

```
> dos -A

```

Telnet Command: exit

Type this command will leave telnet window.

Telnet Command: Internet

This command allows you to configure detailed settings for WAN connection.

Syntax

internet -W n -M n [-<command> <parameter> | ...]

Parameter	Description
-W n	It means to selelct WAN interface for configuration.
	n: 1 to x. The default is WAN1.
-M n	M means to set Internet Access Mode (Mandatory) and n means different modes (represented by 0 - 3) n=0: Offline
	n=1: PPPoE
	n=2: Dynamic IP
	n=3: Static IP
<pre><command/><parameter>]</parameter></pre>	The available commands with parameters are listed below. [] means that you can Enter several commands in one line.
-S <isp name=""></isp>	It means to set ISP Name (max. 23 characters).
-P <on off=""></on>	It means to enable PPPoE Service.
-u <username></username>	It means to set username (max. 49 characters) for Internet

	accessing.
-p <password></password>	It means to set password (max. 49 characters) for Internet
	accessing.
-a n	It means to set PPP Authentication Type and n means different
	types (represented by 0-1).
	n=0: PAP/CHAP (this is default setting)
	n=1: PAP Only
-t n	It means to set connection duration and n means different conditions.
	n=-1: Always-on
	n=1 ~ 999: Idle time for offline (default 180 seconds)
-i <ip address=""></ip>	It means that <i>PPPoE server</i> will assign an IP address specified here
1 \ip addi css>	for CPE (PPPoE client).
	If you type 0.0.0.0 as the <ip address="">, ISP will assign suitable IP</ip>
	address for you. However, if you type an IP address here, the router
	will use that one as a fixed IP.
-w <ip address=""></ip>	It means to assign WAN IP address for such connection. Please type
,	an IP address here for WAN port.
-n <netmask></netmask>	It means to assign netmask for WAN connection. You have to type
	255.255.255.xxx (x is changeable) as the netmask for WAN port.
-g <gateway></gateway>	It means to assign gateway IP for such WAN connection.
-s <server ip=""></server>	Set the PPTP/L2TP Server IP.
	<pre><server ip="">: Enter the IP address (e.g., ppp.qqq.rrr.sss) as the</server></pre>
	PPTP/L2TP server IP.
-A <idx></idx>	Set current interface as Always On mode and specify the <idx></idx>
	number as backup WAN#.
-B <mode></mode>	<id><idx>: Enter the index number.</idx></id>
-B <mode></mode>	Set current interface as Backup mode. <mode>: Enter 0 ro 1.</mode>
	0: When any WAN disconnect;
	1: When all WAN disconnect.
-V	It means to view Internet Access profile.
-C <sim code="" pin=""></sim>	Set (PPP mode) SIM PIN code (max. 15 characters).
-0 <init string=""></init>	Set (PPP mode) Modem Initial String (max. 47 characters).
-T <init string2=""></init>	Set (PPP mode) Modem Initial String2 (max. 47 characters)
-D <dial string=""></dial>	Set (PPP mode) Modem Dial String (max. 31 characters).
-v <service name=""></service>	Set (PPP mode) Service Name (max. 23 characters).
-m <ppp username=""></ppp>	Set (PPP mode) PPP Username (max. 63 characters).
-o <ppp password=""></ppp>	Set (PPP mode) PPP Password (max. 62 characters).
-e n	Set (PPP mode) PPP Authentication Type.
	n= 0: PAP/CHAP (default),
	1: PAP Only
-q n	(PPP mode) Index(1-15) in Schedule Setup-One
-x n	(PPP mode) Index(1-15) in Schedule Setup-Two
-y n	(PPP mode) Index(1-15) in Schedule Setup-Three
-z n	(PPP mode) Index(1-15) in Schedule Setup-Four
-Q <mode></mode>	Set (PPP mode or DHCP mode) WAN Connection Detection Mode.
	<mode></mode>
	0: ARP Detect;
-l <ping ip=""></ping>	1: Ping Detect Set (PPP mode or DHCP mode) WAN Connection Detection Ping IP.
-ı \piny ip>	<pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre> <pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre>
-L n	Set (PPP mode) WAN Connection Detection TTL (1-255) value.
-E <sim code="" pin=""></sim>	Set (DHCP mode) SIM PIN code (max. 19 characters).
-C <mode></mode>	Set (DHCP mode) Network Mode.
C mode/	<mode></mode>
	0: 4G/3G/2G;
	1: 4G Only;
	2: 3G Only;
	3: 2G Only
-N <apn name=""></apn>	
-N <apn name=""> -U n</apn>	3: 2G Only

```
>internet -M 1 -S tcom -u username -p password -a 0 -t -1 -i 0.0.0.0
WAN1 Internet Mode set to PPPoE/PPPoA
WAN1 ISP Name set to tcom
WAN1 Username set to username
WAN1 Password set successful
WAN1 PPP Authentication Type set to PAP/CHAP
WAN1 Idle timeout set to always-on
WAN1 Gateway IP set to 0.0.0.0
> internet -V
WAN1 Internet Mode:
PPPoE
ISP Name: tcom
Username: username
Authentication: PAP/CHAP
Idle Timeout: -1
WAN IP: Dynamic IP
```

Telnet Command: ip pubsubnet

This command allows users to enable or disable the IP routing subnet for your router.

Syntax

ip pubsubnet <Enable/Disable>

Syntax Description

Parameter	Description
Enable	Enable the function.
Disable	Disable the function.

Example

```
> ip pubsubnet enable
public subnet enabled!
```

Telnet Command: ip pubaddr

This command allows to set the IP routed subnet for the router.

Syntax

ip pubaddr ?

ip pubaddr <public subnet IP address>

Parameter	Description
?	Display an IP address which allows users set as the public subnet IP
	address.
public subnet IP address	Specify an IP address. The system will set the one that you specified

```
as the public subnet IP address.
```

```
> ip pubaddr ?
% ip addr <public subnet IP address>
% Now: 192.168.0.1

> ip pubaddr 192.168.2.5
% Set public subnet IP address done !!!
```

Telnet Command: ip pubmask

This command allows users to set the mask for IP routed subnet of your router.

Syntax

ip pubmask?

ip pubmask <public subnet mask>

Syntax Description

Parameter	Description
?	Display an IP address which allows users set as the public subnet
	mask.
public subnet IP address	Specify a subnet mask. The system will set the one that you
	specified as the public subnet mask.

Example

```
> ip pubmask ?
% ip pubmask <public subnet mask>
% Now: 255.255.255.0

> ip pubmask 255.255.0.0
% Set public subnet mask done !!!
```

Telnet Command: ip addr

This command allows users to set/add a specified LAN IP your router.

Syntax

ip addr <IP address>

Syntax Description

Parameter	Description
IP address	It means the LAN IP address.

Example

```
>ip addr 192.168.50.1
% Set IP address OK !!!
```

Info

When the LAN IP address is changed, the start IP address of DHCP server are still the same. To make the IP assignment of the DHCP server being consistent with this new IP address (they should be in the same network segment), the IP address of the PC must be fixed with the same LAN IP address (network segment) set by this command for accessing into the web user interface of the router. Later, modify the start addresses for the DHCP server.

Telnet Command: ip nmask

This command allows users to set/add a specified netmask for your router.

Syntax

ip nmask <IP netmask>

Syntax Description

Parameter	Description
IP netmask	It means the netmask of LAN IP.

Example

```
> ip nmask 255.255.0.0
% Set IP netmask OK !!!
```

Telnet Command: ip arp

ARP displays the matching condition for IP and MAC address.

Syntax

ip arp add <IP address> <MAC address> <LAN or WAN>

ip arp del <IP address> <LAN or WAN>

ip arp flush

ip arp status

ip arp accept <0/1/2/3/4/5/status>

ip arp setCacheLife <time>

In which, arp add allows users to add a new IP address into the ARP table; arp del allows users to remove an IP address; arp flush allows users to clear arp cache; arp status allows users to review current status for the arp table; arp accept allows to accept or reject the source /destination MAC address; arp setCacheLife allows users to configure the duration in which ARP caches can be stored on the system. If ip arp setCacheLife is set with "60", it means you have an ARP cache at 0 second. Sixty seconds later without any ARP messages received, the system will think such ARP cache is expired. The system will issue a few ARP request to see if this cache is still valid.

Parameter	Description
IP address	It means the LAN IP address.
MAC address	It means the MAC address of your router.
LAN or WAN	It indicates the direction for the arp function.
0/1/2/3/4/5/status	0: disable to accept illegal source mac address
	1: enable to accept illegal source mac address
	2: disable to accept illegal dest mac address
	3: enable to accept illegal dest mac address
	4: Decline VRRP mac into arp table
	5: Accept VRRP mac into arp table
	status: display the setting status.
Time	Available settings will be 10, 20, 30,2550 seconds.

```
> ip arp accept status
Accept illegal source mac arp: disable

Accept illegal dest mac arp: disable

Accept VRRP mac into arp table: disable
> ip arp status
[ARP Table]
Index IP Address MAC Address HOST ID Interface VLAN Port
    1 192.168.1.9 60-A4-4C-E6-5A-4F LAN1 --- P1
    2 192.168.1.11 00-1D-AA-0C-CD-08 LAN1 --- P3
```

Telnet Command: ip dhcpc

This command is available for WAN DHCP.

Syntax

ip dhcpc option

ip dhcpc option -h/I

ip dhcpc option -d <idx>

ip dhcpc option -e<1 or 0> -w <wan unmber> -c <option number> -v <option value>

ip dhcpc option -e <1 or 0> -w <wan unmber> -c <option number> -x "<option value>"

ip dhcpc option -e <1 or 0> -w <wan unmber> -c <option number> -a "<option value>"

ip dhcpc option -u <idx unmber>

ip dhcpc release <wan number>

ip dhcpc renew <wan number>

ip dhcpc status

Parameter	Description
option	It is an optional setting for DHCP server.
	-a: set option value by address list
	-c: set option number: 0~255
	-d: delete custom dhcp client option by index number
	-e: enable/disable option feature, 1:enable, 0:disable
	-h: display usage
	-l: list all custom set DHCP options
	-u: update by idx number
	-v: set option value by string
	-w: set wan number
	-x: set option value by raw byte (hex)
	-r: remove all custom DHCP Client options
release <wan number=""></wan>	It means to release current WAN IP address.

	<wan number="">: 1 to 6.</wan>
renew <wan number=""></wan>	It means to renew the WAN IP address and obtain another new one.
	<wan number="">: 1 to 6.</wan>
status	It displays current status of DHCP client.

```
>ip dhcpc status
DHCP Client Status: None active DHCP client!
_____
WAN2:
DHCP Client Status: None active DHCP client!
_____
WAN3:
DHCP Client Status: None active DHCP client!
_____
WAN4: <Virtual WAN>
DHCP Client Status: None active DHCP client!
_____
WAN5: <Virtual WAN>
DHCP Client Status: None active DHCP client!
_____
WAN6: <Virtual WAN>
DHCP Client Status: None active DHCP client!
```

Telnet Command: ip ping

This command allows users to ping IP address of WAN1/WAN2/PVC3/PVC4/PVC5 for verifying if the WAN connection is OK or not.

Syntax

ip ping <IP address> <AUTO/WAN1/PVC3/PVC4/PVC5> <Source IP address>

Syntax Description

Parameter	Description
IP address	It means the WAN IP address.
AUTO/WAN1/PVC3/PVC4/PVC	It means the WAN port /PVC that the above IP address passes
5	through.

Example

```
>ip ping 172.16.3.229 WAN1
Pinging 172.16.3.229 with 64 bytes of Data:
Receive reply from 172.16.3.229, time=0ms
Receive reply from 172.16.3.229, time=0ms
```

```
Receive reply from 172.16.3.229, time=0ms

Packets: Sent = 5, Received = 5, Lost = 0 <0% loss>
```

Telnet Command: ip tracert

This command allows users to trace the routes from the router to the host.

Syntax

ip tracert <Host/IP address> <WAN1/WAN3> <Udp/Icmp>

Syntax Description

Parameter	Description
Host/IP address	It means the target IP address / host.
WAN1/WAN3	It means the WAN port that the above IP address passes through.
Udp/Icmp	It means the UDP or ICMP.

Example

```
>ip tracert 22.128.2.62 WAN1
Traceroute to 22.128.2.62, 30 hops max

1    172.16.3.7    10ms

2    172.16.1.2    10ms

3    Request Time out.

4    168.95.90.66    50ms

5    211.22.38.134    50ms

6    220.128.2.62    50ms

Trace complete
```

Telnet Command: ip telnet

This command allows users to access specified device by telnet.

Syntax

ip telnet <IP address><Port>

Syntax Description

Parameter	Description
IP address	Enter the WAN or LAN IP address of the remote device.
Port	Type a port number (e.g., 23).
	Available settings: 0 ~65535.

```
> ip telnet 172.17.3.252 23 >
```

Telnet Command: ip rip

This command allows users to set the RIP (routing information protocol) of IP.

Syntax

ip rip <0/1/2>

Syntax Description

Parameter	Description
0/1/2	0 means disable.
	1 means LAN1.
	2 means IP Routed.

Example

```
> ip rip 1
%% Set RIP LAN1.
```

Telnet Command: ip wanrip

This command allows users to set the RIP (routing information protocol) of WAN IP.

Syntax

ip wanrip <ifno> -e <0/1>

Syntax Description

Parameter	Description
ifno	It means the connection interface.
	1: WAN1, 3: PVC3,4: PVC4,5: PVC5
	Note: PVC3 ~PVC5 are virtual WANs.
-e <0/1>	It means to disable or enable RIP setting for specified WAN
	interface.
	1: Enable the function of setting RIP of WAN IP.
	0: Disable the function.

```
> ip wanrip ?
Valid ex:ip wanrip <ifno> -e <0/1>
<ifno> 1: WAN1
      3: PVC3,4: PVC4,5: PVC5
-e <0/1> 0: disable, 1: enable
Now status:
WAN[1] Rip Protocol disable
WAN[3] Rip Protocol disable
WAN[4] Rip Protocol disable
WAN[5] Rip Protocol disable
WAN[6] Rip Protocol enable
WAN[7] Rip Protocol enable
WAN[8] Rip Protocol enable
WAN[9] Rip Protocol enable
WAN[10] Rip Protocol enable
> ip wanrip 5 -e 1
> ip wanrip ?
```

```
Valid ex:ip wanrip <ifno> -e <0/1>
<ifno> 1: WAN1
3: PVC3,4: PVC4,5: PVC5
-e <0/1> 0: disable, 1: enable
Now status:

Telnet Command: ip route

This command allows users to set static route.

Syntax

ip route add <dst> <netmask> <gateway> <ifno> <rtype>
ip route del <dst> <netmask> <rtype>
ip route status
ip route cnc
ip route default <off/?>
ip route clean <1/0>

Syntax Description

Parameter	Description
dd <dst> <netmask></netmask></dst>	It means to add an IP address as static route.
<gateway> <ifno></ifno></gateway>	<dst>: Set the IP address of the destination.</dst>
<rtype></rtype>	<netmask>: Set the netmask of the specified IP address.</netmask>
	<gateway>: Set the gateway of the connected router.</gateway>
	<ifno>: Enter the connection interface. In which, 3 means WAN1.</ifno>
	<pre><rtype>: Set the type (default or static) of the route.</rtype></pre>
	In which, default : default route; static: static route.
del <dst> <netmask></netmask></dst>	It means to delete specified IP address.
<rtype></rtype>	<dst>: Set the IP address of the destination.</dst>
	<netmask>: Set the netmask of the specified IP address.</netmask>
	<pre><rtype>: Set the type (default or static) of the route.</rtype></pre>
	In which, default : default route; static: static route.
status	It means current status of static route.
cnc	It means current IP range for CNC Network.
default <off ?=""></off>	Set current default route.
clean <1/0>	Clean all of the route settings.
	1: Enable the function.
	0: Disable the function.

```
> ip route add 172.16.2.0 255.255.255.0 172.16.2.4 3 static
> ip route status

Codes: C - connected, S - static, R - RIP, * - default, ~ - private
C~ 192.168.1.0/ 255.255.255.0 is directly connected, LAN1
S 172.16.2.0/ 255.255.255.0 via 172.16.2.4, WAN1
```

Telnet Command: ip igmp_proxy

This command allows users to enable/disable igmp proxy server.

Syntax

```
ip igmp_proxy set
```

ip igmp_proxy reset

ip igmp_proxy wan

ip igmp_proxy t_home <on/off/show/help>

ip igmp_proxy query

ip igmp_proxy ppp <0/1>

ip igmp_proxy status

ip igmp_proxy version <v2/v3/auto/show>

ip igmp_proxy syslog <0/1>

Syntax Description

Parameter	Description
set	It means to enable proxy server.
reset	It means to disable proxy server.
wan	It means to specify WAN interface for IGMP service.
t_home	It means to specify t_home proxy server for using.
On/off/show/help	It means to turn on/off/display or get more information of the
	T_home service.
query	It means to set IGMP general query interval.
	The default value is 125000 ms.
ррр	0 - No need to set IGMP with PPP header.
	1 - Set IGMP with PPP header.
status	It means to display current status for proxy server.
version <v2 auto="" show="" v3=""></v2>	It means to set IGMP version fixed on v2 or v3.
syslog <0/1>	It means to set IGMP syslog.
	0: disable
	1: enable

```
> ip igmp_proxy query 130000

This command is for setting IGMP General Query Interval

The default value is 125000 ms

Current Setting is:130000 ms

>
```

Telnet Command: ip igmp_snoop

This command allows users to enable or disable IGMP snoop function.

Syntax

ip igmp_snoop enable

ip igmp_snoop disable

ip igmp_snoop status

ip igmp_snoop hw_acc <on/off/status>

ip igmp_snoop txquery <on/off> <v2/v3>

ip igmp_snoop chkleave <on/off>

ip igmp_snoop separate <on/off>

Syntax Description

Parameter	Description
enable	It means to enable igmp snoop function
disable	It means to disable igmp snoop function.
status	It means to display current igmp configuration.
hw_acc <on off="" status=""></on>	It means to set (on/off) or display the HW accleration setting for IGMP Snoop.
txquery <on off=""> <v2 v3=""></v2></on>	It means to send out IGMP QUERY to LAN periodically. On: enable Off: disable v2: version v2 v3: version v3
chkleave <on off=""></on>	It means to check the leave status. On: enable the IGMP snoop leave checking function. Off: it will drop LEAVE if still clients on the same group.
separate <on off=""></on>	It means to set IGMP packets being separated by NAT/Bridge. On: The packets will be separated. Off: The packets will not be separated by NAT/Bridge.

Example

```
> ip igmp_snoop enable
%% ip igmp snooping [enable|disable|status], IGMP Snooping is Enabled.
> ip igmp_snoop disable
%% ip igmp snooping [enable|disable|status], IGMP Snooping is Disabled.
> ip igmp_snoop separate ?
% ip igmp separate [on/off]
igmp snoop seprate is ON now.
igmp packets will be separated by NAT/Bridge.
```

Telnet Command: ip igmp_fl

This command allows users to enable or disable IGMP Fast Leave function.

Syntax

ip igmp_fl enable

ip igmp_fl disable

ip igmp_fl status

Parameter	Description
enable	It means to enable IGMP Fast Leave function

disable	It means to disable IGMP Fast Leave function.
status	It means to display current IGMP Fast Leave configuration.

```
>ip igmp_fl enable
%% ip igmp_fl [enable|disable|status], IGMP Fast Leave is Enabled.
>
```

Telnet Command: ip session

This command allows users to set maximum session limit number for the specified IP; set message for exceeding session limit and set how many seconds the IP session block works.

Syntax

ip session on

ip session off

ip session default <num>

ip session defaultp2p <num>

ip session status

ip session show

ip session timer <num>

ip session <block/unblock> <IP>

ip session <add/del> <IP1-IP2> <num> <p2pnum>

Syntax Description

Parameter	Description
on	It means to turn on session limit for each IP.
off	It means to turn off session limit for each IP.
default <num></num>	It means to set the default number of session num limit.
defautlp2p <num></num>	It means to set the default number of session num limit for p2p.
status	It means to display the current settings.
show	It means to display all session limit settings in the IP range.
timer <num></num>	It means to set when the IP session block works. The unit is second.
<block unblock=""> <ip></ip></block>	It means to block/unblock the specified IP address. Block: The IP cannot access Internet through the router. Unblock: The specified IP can access Internet through the router.
<add del=""> <ip1-ip2> <num> <p2pnum></p2pnum></num></ip1-ip2></add>	It means to add / delete the session limits in an IP range. <ip1-ip2> - Set the range of IP address specified for this command. <num> - Set the number of the session limits, e.g., 100. <p2pnum> - Set the number of the session limits, e.g., 50 for P2P.</p2pnum></num></ip1-ip2>

```
> ip session default 100
> ip session add 192.168.1.5-192.168.1.100 100 50
```

```
> ip session on
> ip session status

IP range:
    192.168.1.5 - 192.168.1.100 : 100

Current ip session limit is turn on
Current default session number is 100
```

Telnet Command: ip bandwidth

This command allows users to set maximum bandwidth limit number for the specified IP.

Syntax

ip bandwidth on

ip bandwidth off

ip bandwidth default <tx_rate> <rx_rate>

ip bandwidth status

ip bandwidth routing <on/off>

ip bandwidth schedule <s1> <s2> <s3> <s4>

ip bandwidth show

ip bandwidth <add/del> <IP1-IP2> <tx> <rx> <shared>

Syntax Description

Parameter	Description
on	It means to turn on the IP bandwidth limit.
off	It means to turn off the IP bandwidth limit.
default <tx_rate> <rx_rate></rx_rate></tx_rate>	It means to set default tx and rx rate of bandwidth limit. The range is from 0 - 65535 Kpbs.
status	It means to display the current settings.
routing <on off=""></on>	It means to apply to IP Routed Subnet. On: apply to Off: not apply to
schedule <s1> <s2> <s3> <s4></s4></s3></s2></s1>	It means to set the scheduel profile(s) (0 to 16). Up to 4 profiles can be specified at one time.
show	It means to display all the bandwidth limits settings within the IP range.
<add del=""> <ip1-ip2> <tx> <rx> <shared></shared></rx></tx></ip1-ip2></add>	It means to add / delete the bandwidth within the IP range. <ip1-ip2>: Set the range of IP address specified for this command. <tx>: Set transmission rate for bandwidth limit. <rx>: Set receiving rate for bandwidth limit. <shared>: Set the bandwidth will be shared for the IP range.</shared></rx></tx></ip1-ip2>

```
> ip bandwidth default 200 800
> ip bandwidth add 192.168.1.50-192.168.1.100 10 60
> ip bandwidth status
> ip bandwidth routing on
```

> ip bandwidth schedule 1

Telnet Command: ip dataflowmonitor

This command allows users to set data flow monitor mechanism.

Syntax

ip dataflowmonitor on

ip dataflowmonitor off

ip dataflowmonitor status

Syntax Description

Parameter	Description
on	It means to enable the data flow monitor.
off	It means to disable the data flow monitor.
status	It means to show the status of data flow monitor.

Example

```
> ip dataflowmonitor on
Enable Data Flow Monitor.
>
```

Telnet Command: ip bindmac

This command allows users to set IP-MAC binding for LAN host.

Syntax

ip bindmac on

ip bindmac off

ip bindmac strict_on

ip bindmac strict_off

ip bindmac add <IP> <MAC> <Comment>

ip bindmac del <IP>/all

ip bindmac subnet <all/set LAN_Index/unset LAN_Index/clear/show>

ip bindmac show

Parameter	Description
on	It means to turn on IP bandmac policy. Even the IP is not in the policy table, it can still access into network.
off	It means to turn off all the bindmac policy.
strict_on	It means that only those IP address in IP bindmac policy table can access into network.
strict_off	It means to turn off IP bindmac policy.
show	It means to display the IP address and MAC address of the pair of

	binded one.
add <ip> <mac> <comment></comment></mac></ip>	It means to add one ip bindmac. <ip>: Enter the IP address for binding with specified MAC address. <mac>: Enter the MAC address for binding with the IP address specified. <comment>: Enter words as a brief description.</comment></mac></ip>
del <ip> <all></all></ip>	It means to delete one ip bindmac. <ip>: Enter the IP address for binding with specified MAC address. <all>: Delete all the IP bindmac settings.</all></ip>
subnet <all set<br="">LAN_Index/unset LAN_Index/clear/show></all>	It means to set LAN subnet to bind strict mode. <all>: Set all LAN subnets to bind strict mode. <set lan_index="">: Enable the subnet setting by specify the index number of LAN subnet. <unset lan_index="">: Disable the subnet setting by specify the index number of LAN subnet. Clear: Clear the settings. Show: Display the setting.</unset></set></all>

```
> ip bindmac add 192.168.1.46 00:50:7f:22:33:55 just for test
> ip bindmac show
ip bind mac function is turned OFF
ip bind mac function is STRICT OFF
Show all IP Bind MAC entries.
IP : 192.168.1.46 bind MAC : 00-50-7f-22-33-55 HOST ID :
    Comment : just
>
```

Telnet Command: ip maxnatuser

This command is used to set the maximum number of NAT users.

Syntax

ip maxnatuser user no

Syntax Description

Parameter	Description
User no	A number specified here means the total NAT users that Vigor router supports. 0 - It means no limitation.

Example

```
> ip maxnatuser 100
% Max NAT user = 100
```

Telnet Command: ip policy_rt

This command is used to set the IP policy route profile.

Syntax

ip policy_rt [-<command> <parameter> | ...]

Parameter	Description
<command/> <parameter>]</parameter>	The available commands with parameters are listed below. [] means that you can Enter several commands in one line.
General Setup for Policy Rout	e
-i <value></value>	Specify an index number for setting policy route profile. Value: 1 to 60. "-1" means to get a free policy index automatically.
-e <0/1>	O: Disable the selected policy route profile. 1: Enable the selected policy route profile.
-o <value></value>	Determine the operation of the policy route. Value: add - Create a new policy rotue profile. del - Remove an existed policy route profile. edit - Modify an existed policy route profile. flush - Reset policy route to default setting.
-1 <any range=""></any>	Specify the source IP mode. Range: Indicate a range of IP addresses. Any: It means any IP address will be treated as source IP address.
-2 <any d<br="" ip_range="" ip_subnet="">omain></any>	Specify the destination IP mode. Any: No need to specify an IP address for any IP address will be treated as destination IP address. ip_range: Indicates a range of IP addresses. ip_subnet: Indicates the IP subnet. domain: Indicates the domain name.

2 .anu/ranga.	Charify the destination part made
-3 <any range=""></any>	Specify the destination port mode. Range: Indicate a range of port number.
	Any: It means any port number can be used as destination port.
-G <default specific=""></default>	Specify the gateway mode.
-L <default specific=""></default>	Specify the failover gateway mode.
·	
-s <value></value>	Indicate the source IP start. Value: The type format shall be "xxx.xxx.xxx". (e.g, 192.168.1.0)
-S <value></value>	Indicate the source IP end. Value: The type format shall be "xxx.xxx.xxx.xxx". (e.g, 192.168.1.100)
-d <value></value>	Indicate the destination IP start. Value: The type format shall be "xxx.xxx.xxx.xxx". (e.g, 192.168.2.0)
-D <value></value>	Indicate the destination IP end. Value: The type format shall be "xxx.xxx.xxx". (e.g, 192.168.2.100)
-p <value></value>	Indicate the destination port start. Value: Type a number (1 ~ 65535) as the port start (e.g., 1000).
-P <value></value>	Indicate the destination port end. Value: Type a number (1 ~ 65535) as the port end (e.g., 2000).
-y <value></value>	Indicate the priority of the policy route profile. Value: Type a number (0 ~ 250). The default value is "150".
-l <value></value>	Indicate the interface specified for the policy route profile. Value: Available interfaces include, LAN1 ~ LAN8, IP_Routed_Subnet, DMZ_Subnet, WAN1 ~ WAN3, VPN_PROFILE_1 ~ VPN_PROFILE_32, WAN_1_IP_ALIAS_1 ~ WAN_2_IP_ALIAS_8
-g <value></value>	Indicate the gateway IP address. Value: The type format shall be "xxx.xxx.xxx.xxx". (e.g, 192.168.3.1)
-l <value></value>	Indicate the failover IP address. Value: The type format shall be "xxx.xxx.xxx.xxx". (e.g, 192.168.4.1)
-t <value></value>	It means "protocol". Value: Available settings include "TCP", "UDP", "TCP/UDP", "ICMP" and "Any".
-n <0/1>	Indicates the function of "Force NAT". 0: Disable the function. 1: Enable the function.
-a <0/1>	Indicates to enable the function of failover. 0: Disable the function. 1: Enable the function.
-f <value></value>	It means to specify the interface for failover. Value: Avaialbe interfaces include, NO_FAILOVER, Default_WAN, Policy1 ~ Policy30 LAN1 ~ LAN8 IP_Routed_Subnet, DMZ_Subnet, WAN1 ~ WAN3,

	VPN_PROFILE_1 ~ VPN_PROFILE_32,
	WAN_1_IP_ALIAS_1 ~ WAN_2_IP_ALIAS_8
-b <value></value>	It means "failback".
	Value: Available settings include,
	0: Disable the function of "failback".
	1: Enable the function of "failback".
-V	It means to display non-default settings.
Diagnose for Policy Route	
-s <value></value>	It means "source IP".
	Value: Available settings include:
	Any: It indicates any IP address can be used as source IP address.
	"xxx.xxx.xxx": The type format (e.g, 192.168.1.0).
-d <value></value>	It means "destination IP".
	Value : Available settings include:
	Any: It indicates any IP address can be used as destination IP address.
	"xxx.xxx.xxx": Specify an IP address.
-p <value></value>	It means "destination port".
	Value: Specify a number or type Any (indicating any number).
-t <value></value>	It means "protocol".
	Value: Available settings include "ICMP", "TCP", "UDP" and "Any".

```
> ip policy_rt diagnose -s 192.168.1.100 -d any -p any -t ICMP

Matched Route (Priority)

* No_Match

Matched Policy (Priority)

* Policy_1 (200)

* Conclusion: The packet was dropped because the send-to interface of the matched policy "policy 1" was inactive and there was no failover setting
> ip policy_rt -i -1 -o add -1 range -s 192.168.1.10 -S 192.168.1.20 -2 ip_range -d 202.211.100.10 -D 202.211.100.20 -g 202.211.100.1 -I WAN2
```

Telnet Command: ip lanDNSRes

This command is used to set LAN DNS profiles. With such feature, the user can configure some services (such as ftp, www or database) with domain name which is easy to be accessed.

Syntax

ip lanDNSRes [-<command> <parameter> | ...]

Parameter	Description
-a <ip address=""></ip>	It is used to configure IP address mapping (IPv4/IPv6 Address or

	multiple subnet addresses).
	IP Address: type the IP address (e.g., 192.168.1.56).
-c <cname></cname>	It is used to set CNAME.
	CNAME: Enter a string.
-d <address index<="" mapping="" td=""><td>It means to delete index number with address mapping configured.</td></address>	It means to delete index number with address mapping configured.
number>	address mapping index number: type the index number which represents the address mapping profile.
-e <0/1>	It means to enable or disable the function of LAN DNS or DNS
	Forwarding Profile.
	0: disable
	1: enable
-i <profile index<="" setting="" td=""><td>It means to create LAN DNS profile with specified domain name.</td></profile>	It means to create LAN DNS profile with specified domain name.
number>	profile setting index number: type the index number which represents the profile with domain name configured.
-1	It means to list detailed information of profile configuration.
-n <domain name=""></domain>	It means to specify a domain name to be accessed.
-p <profile name=""></profile>	It means to set name of the LAN DNS profile.
-r	It means to clear specified domain name profile and the address mapping setting.
-R	It means to set to factory default setting.
-s <0/1>	It means to determine all subnet packets or only the packets with the same subnet will be replied for address mapping profile.
	0: reply all subnet packets.
	1: reply only same subnet packet.
-Z	It means to update LAN DNS configuration to DNS cache.

Telnet Command: ip dnsforward

This command is used to set LAN DNS profile for conditional DNS forwarding. ip dnsforward [-<command><parameter> | ...]

Parameter	Description

[<command/>	The available commands with parameters are listed below.
<parameter>]</parameter>	[] means that you can Enter several commands in one line.
-a <ip address="" domain<="" td=""><td>Set forwarded DNS server IP Address or domain name.</td></ip>	Set forwarded DNS server IP Address or domain name.
Name>	<pre><ip address="" domain="" name="">: Enter an IP address or the domain name.</ip></pre>
-d <dns mapping<="" server="" td=""><td>Delete the selected LAN DNS profile.</td></dns>	Delete the selected LAN DNS profile.
index number>	<dns index="" mapping="" number="" server="">: Enter the index number.</dns>
-e <0/1>	0: disable this function.
	1: enable this function.
-i <profile index<="" setting="" td=""><td>Type the index number of the profile.</td></profile>	Type the index number of the profile.
number>	<pre><pre><pre><pre><pre><pre><pre><pre></pre></pre></pre></pre></pre></pre></pre></pre>
-1	List the content of LAN DNS profile (including domain name, IP
	address and message).
-n <domain name=""></domain>	Set domain name.
-p <profile name=""></profile>	Set profile name for LAN DNS.
-r	Reset the settings for selected profile.

```
> ip dnsforward -i 1 -n ftp.drayTek.com
% Configure Set1's DomainName:ftp.drayTek.com
> ip dnsforward -i 1 -a 172.16.1.1
% Configure Set1's IP:172.16.1.1
> ip dnsforward -i 1 -1
% Idx: 1
% State: Disable
% Profile: test
% Domain Name: ftp.drayTek.com
% DNS Server IP: 172.16.1.1
>
```

Telnet Command: ip spoofdef

This command is used to enable/disable the IP Spoofing Defense.

Syntax

ip spoofdef < WAN/LAN> < 0/1>

Parameter	Description
<wan lan=""></wan>	It means to block IP packet from WAN/LAN with inconsistent source IP address.
<0/1>	Disable the function. Enable the function.

```
> ip spoofdef WAN 1
Setting saved:
>
```

Telnet Command: ip6 addr

This command allows users to set the IPv6 address for your router.

Syntax

Parameter	Description
-s <prefix> <prefix-length> <lan1 lan4="" usb<br="" wan1="">/VPN1/VPN32></lan1></prefix-length></prefix>	It means to add a static ipv6 address. <pre><pre><pre><pre><pre><pre><pre><pre></pre></pre></pre></pre></pre></pre></pre></pre>
-d <prefix> <prefix-length> <lan1 lan4="" usb<br="" wan1="">/VPN1/VPN32></lan1></prefix-length></prefix>	It means to delete an ipv6 address. <pre><pre><pre><pre><pre><pre><pre><pre></pre></pre></pre></pre></pre></pre></pre></pre>
-a <lan1 lan4="" wan1<br="">/USB /VPN1/VPN32> -u -v <lan1 <="" lan4="" td=""><td>It means to show current address(es) status. <lan1 lan4="" usb="" vpn1="" vpn32="" wan1="">: It means to specify LAN/WAN/USB/VPN interface. <-u>: It means to show unicast address only. It means to show prefix list status.</lan1></td></lan1></lan1>	It means to show current address(es) status. <lan1 lan4="" usb="" vpn1="" vpn32="" wan1="">: It means to specify LAN/WAN/USB/VPN interface. <-u>: It means to show unicast address only. It means to show prefix list status.</lan1>
WAN1/USB>	Te means to show premy tist status.
-t <old-prefix><old-prefix-leng th><new-prefix> <new-prefix-length></new-prefix-length></new-prefix></old-prefix-leng </old-prefix>	It means to update WAN static IPv6 address table. <old-prefix>: It means to enter the prefix number of IPv6 address. <old prefix-length="">: It means to enter a fixed value as the length of the prefix.</old></old-prefix>

<lan1 lan4="" usb="" wan1=""></lan1>	<pre><new-prefix>: It means to enter the prefix number of IPv6 address.</new-prefix></pre>
SEANT EANT WANT 0302	<new prefix-length="">: It means to enter a fixed value as the length of the prefix.</new>
	<lan1 lan4="" usb="" wan1="">: It means to specify LAN/WAN/USB interface for such address.</lan1>
-0 <1/2>	<1>: It means to show old prefix list.
	<2>: It means to send old prefix option by RA.
-o <3> <pre><pre></pre></pre>	<3>: It means to set old prefix.
<pre><pre></pre></pre>	<pre><pre><pre><pre><pre><pre><pre><pre></pre></pre></pre></pre></pre></pre></pre></pre>
<wan1 usb=""></wan1>	<pre><pre><pre><pre><pre><pre><pre>fix-length>: It means to enter a fixed value as the length of the prefix.</pre></pre></pre></pre></pre></pre></pre>
	<wan1 usb="">: It means to specify a WAN/USB interface for such address.</wan1>
-I <pre>-I <pre>refix> <prefix-length> <</prefix-length></pre></pre>	It means to add a ULA.
LAN1/LAN8>	<pre><pre><pre><pre><pre><pre><pre><pre></pre></pre></pre></pre></pre></pre></pre></pre>
	<pre><pre><pre><pre><pre><pre><pre>fix-length>: It means to enter a fixed value as the length of the prefix.</pre></pre></pre></pre></pre></pre></pre>
	<lan1 lan8="">: It means to specify a LAN interface for such address.</lan1>
-p/-b <prefix></prefix>	It means to add/delete an prefix to/from prefix list.
<pre><pre><pre></pre></pre></pre>	p: Add a prefix to a prefix list.
/USB>	b: Delete a prefix from a prefix list.
	<pre><pre><pre><pre><pre><pre><pre><pre></pre></pre></pre></pre></pre></pre></pre></pre>
	<pre><pre><pre><pre><pre><pre><pre>fix-length>: It means to enter a fixed value as the length of the prefix.</pre></pre></pre></pre></pre></pre></pre>
	<wan1 usb="">: It means to specify a WAN/USB interface for such address.</wan1>
-x <lan1 lan4=""></lan1>	It means to generate a ULA automatically.
	<lan1 lan4="">: It means to specify a LAN interface.</lan1>
-c <lan1 lan4=""></lan1>	It means to delete a ULA .
	<pre><lan1 lan4="">: It means to specify a LAN interface.</lan1></pre>
-e <type> <lan1 lan4=""></lan1></type>	It means to set ULA type.
	<type>: 0, disable; 1, static; 2, auto</type>
	<pre><lan1 lan4="">: It means to specify a LAN interface.</lan1></pre>

```

Telnet Command: ip6 dhcp req_opt

This command is used to configure option-request settings for DHCPv6 client.

Syntax

ip6 dhcp req_opt <LAN1/LAN2/.../LAN4/WAN1/USB> [-<command> <parameter>/ ...]

Syntax Description

Parameter	Description
req_opt	It means option-request.
<lan1 lan2="" lan4="" wan<br="">1/USB></lan1>	It means to specify LAN or WAN interface for such address.
[<command/>	The available commands with parameters are listed below.
<parameter>]</parameter>	[] means that you can Enter several commands in one line.
-a	It means to show current DHCPv6 status.
-S	It means to ask the SIP.
-S	It means to ask the SIP name.
-d	It means to ask the DNS setting.
-D	It means to ask the DNS name.
-n	It means to ask NTP.
-i	It means to ask NIS.
-1	It means to ask NIS name.
-р	It means to ask NISP.
-P	It means to ask NISP name.
-b	It means to ask BCMCS.
-В	It means to ask BCMCS name.
-r	It means to ask refresh time.
Parameter	1: the parameter related to the request will be displayed.
	0: the parameter related to the request will not be displayed.

```
> ip6 dhcp req_opt WAN1 -S 1
> ip6 dhcp req_opt WAN1 -r 1
> ip6 dhcp req_opt WAN1 -a
% Interface WAN2 is set to request following DHCPv6 options:
```

```
% sip name
% dns
% refresh time
>
```

Telnet Command: ip6 dhcp client

This command allows you to use DHCPv6 protocol to obtain IPv6 address from server.

Syntax

ip6 dhcp client <WAN1/USB> [-<command> <parameter>/ ...]

Syntax Description

Parameter	Description
client	It means the dhcp client settings.
[<command/> <parameter>]</parameter>	The available commands with parameters are listed below. [] means that you can Enter several commands in one line.
-a	It means to show current DHCPv6 status.
-p <iaid></iaid>	It means to request identity association ID for Prefix Delegation.
-n <iaid></iaid>	It means to request identity association ID for Non-temporary Address.
-t <time></time>	It means to set solicit interval. <time>: 0 ~ 7 seconds (default value is 0).</time>
-c <parameter></parameter>	It means to send rapid commit to server. 1: Enable 0: Disable
-i <parameter></parameter>	It means to send information request to server. 1: Enable 0: Disable
-e <parameter></parameter>	It means to enable or disable the DHCPv6 client. 1: Enable 0: Disable
-m <parameter></parameter>	It means to enable/disable server DUID set by Link layer and time. 1: Enable 0: Disable
-d	It means to display the client DUID.
-A <parameter></parameter>	It means to set authentication protocol. 0: Undefine 2: delayed protocol
-R <parameter></parameter>	It means to set realm value (max: 31 characters) in delayed protocol. <pre><pre><pre><pre><pre><pre><pre><pre></pre></pre></pre></pre></pre></pre></pre></pre>
-\$ <parameter></parameter>	It means to set shared secret (max: 31 characters) in delayed protocol. <pre><pre><pre><pre><pre><pre><pre><pre></pre></pre></pre></pre></pre></pre></pre></pre>
-K <parameter></parameter>	It means to set key ID (1-65535) in delayed protocol. <pre><pre><pre><pre><pre><pre><pre><pre></pre></pre></pre></pre></pre></pre></pre></pre>

```
> ip6 dhcp client WAN1 -d
Client DUID = 000300011449bc0a8ab9
> ip6 dhcp client WAN1 -a
   Interface WAN1 has following DHCPv6 client settings:
        DHCPv6 client enabled
        request IA_PD whose IAID equals to 2008
> system reboot
```

Telnet Command: ip6 dhcp server

This command allows you to configure DHCPv6 server.

Syntax

ip6 dhcp server [-<command> <parameter>| ...]

Parameter	Description
server	It means the dhcp server settings.
[<command/>	The available commands with parameters are listed below.
<pre><parameter>]</parameter></pre>	[] means that you can Enter several commands in one line.
-1	It means to clear the DHCPv6 table.
-a	It means to show current DHCPv6 status.
-b	It means to show current DHCPv6 IP assignment table.
-n <name></name>	It means to set a pool name.
-c <parameter></parameter>	It means to send rapid commit to server.
	1: Enable
	0: Disable
-e <parameter></parameter>	It means to enable or disable the DHCPv6 server.
	1: Enable
	0: Disable
-t <time></time>	It means to set prefer lifetime.
-y <time></time>	It means to set valid lifetime.
-u <time></time>	It means to set T1 time.
-o <time></time>	It means to set T2 time.
-i <pool_min_addr></pool_min_addr>	It means to set the start IPv6 address of the address pool.
-x <pool_max_addr></pool_max_addr>	It means to set the end IPv6 address of the address pool.
-R	It means to send reconfigure packet to the client.
-r <0/1>	It means to disable (0) or enable (1) the auto range.
-N <0/1>	It means to disable (0) or enable (1) the random address allocation.
-d <addr></addr>	It means to set the first DNS IPv6 address.
	<addr> : Enter an IPv6 address.</addr>
-D <addr></addr>	It means to set the second DNS IPv6 address.
	<addr> : Enter an IPv6 address.</addr>

-m <1/0>	It means to enable(1) or disable (0) the server DUID set by Link Layter and Time.
-q <name></name>	It means to set DNS domain search list. <name>: Enter a name.</name>
-z <0/1>	It means to disable (0) or enable (1) the DHCP PD.
pdadd <suffix> <prefix_len> <client linklocal=""><client duid=""></client></client></prefix_len></suffix>	It means to add PD node.
pddel <pd index=""></pd>	It means to delete PD node. <pd index="">: Enter a number.</pd>
-A <parameter></parameter>	It means to set authentication protocol. <parameter>: Enter 0, 2 or 3. 0: Undefine 2: delayed protocol 3: Reconfigure key</parameter>
-M <parameter></parameter>	It means to set realm value (max: 31 characters) in delayed protocol. <pre><pre><pre><pre><pre><pre><pre><pre></pre></pre></pre></pre></pre></pre></pre></pre>
-S <parameter></parameter>	It means to set shared secret (max: 31 characters) in delayed protocol. <pre><pre><pre><pre><pre><pre><pre><pre></pre></pre></pre></pre></pre></pre></pre></pre>
-K <parameter></parameter>	It means to set key ID (1-65535) in delayed protocol. <pre><pre><pre><pre><pre><pre><pre><pre></pre></pre></pre></pre></pre></pre></pre></pre>

```
> ip6 dhcp server LAN1 pdadd 11:22:33 64 fe80::e202:1bff:fe65:4084
000100011d2ce39a00e06f25c839
%        Add to PD list success!
%% PD status : invalid, no prefix available.
>
```

Telnet Command: ip6 internet

This command allows you to configure settings for accessing Internet.

Syntax

ip6 internet -W n -M n [-<command> <parameter> / ...]

Parameter	Description
[<command/> <parameter>]</parameter>	The available commands with parameters are listed below. [] means that you can Enter several commands in one line.
-W n	W means to set WAN interface and n means different selections. Default is WAN1. n=1: WAN1 n=2: WAN2 n=3: WAN3 n=X: WANx
-M n	M means to set Internet Access Mode (Mandatory) and n means

	different modes (very secreted by O. E.)
	different modes (represented by 0 - 5) n= 0: Offline,
	n=1: PPP,
	n=2: TSPC, n=3: AICCU,
	n=4: DHCPv6,
	n=5: Static
	n=6:6in4-Static n=7:6rd
-m n	It means to set IPv6 MTU.
	N = any value (0 means "unspecified").
6rd	
-C <n></n>	It means to set 6rd connection mode.
	n=0: Auto
	n=1: Static
-s <server></server>	It means to set 6rd IPv4 Border Relay.
	<pre><server>: Enter a string.</server></pre>
-m <n></n>	It means to set 6rd IPv4 address mask length.
	<n>: Enter a number.</n>
-p <prefix></prefix>	It means to set IPv6 prefix for 6rd connection.
	<pre><pre><pre><pre><pre><pre><pre><pre></pre></pre></pre></pre></pre></pre></pre></pre>
-1 <n></n>	It means to set the prefix length for 6rd connection.
	<n>: It means to enter a fixed value as the length of the prefix.</n>
6in4	·
-s <server></server>	It means to set 6in4 remote endpoint IPv4 address.
-I <ipv6 addr=""></ipv6>	It means to set the IPv6 address for 6in4 connection.
-P <n></n>	It means to set IPv6 WAN prefix length for 6in4 connection.
-p <prefix></prefix>	It means to set 6in4 LAN Routed Prefix.
-1 <n></n>	It means to set 6in4 LAN Routed Prefix length.
-T <n></n>	It means to set 6in4 Tunnel TTL.
TSPC/AICCU	
-u <username></username>	It means to set username (max. 63 characters).
	<username>: Enter a string.</username>
-P <password></password>	It means to set Password (max. 63 characters).
	<pre><password>: Enter a password.</password></pre>
-s <server></server>	It means to set Tunnel Server IP.
	<pre><server>: Enter an IPv4 Address or URL (max. 63 characters)</server></pre>
AICCU	
-p <prefix></prefix>	It means to set Subnet Prefix (AICCU).
	<pre><pre><pre><pre><pre><pre><pre><pre></pre></pre></pre></pre></pre></pre></pre></pre>
-l <n></n>	It means to set Subnet Prefix length (AICCU).
	<n>: Enter a number.</n>
-0 <1/0>	It means to set AICCU always on.
	1: on
	0: off
-f	It means to set AICCU tunnel ID.
static	
-w <addr></addr>	It means to set Default Gateway.

	<addr>: Enter an IPv6 address.</addr>
Others	
-d <server></server>	It means to set 1st DNS Server IP. <server>: Enter an IPv6 address.</server>
-D <server></server>	It means to set 2nd DNS Server IP. <server>: Enter an IPv6 address.</server>
-t <dhcp none="" ra=""></dhcp>	It means to set ipv6 PPP WAN test mode for DHCP or RA. <dhcp none="" ra=""> : Enter dhcp, ra or none.</dhcp>
-V	It means to view IPv6 Internet Access Profile.
-k	It means to dial the Tunnel on the WAN.
-j	It means to drop the Tunnel on the WAN.
-r n	It means to set Prefix State Machine RA timeout.
-c n	It means to set Prefix State Machine DHCPv6 Client timeout.
-q <0/1/2>	It means to set WAN detection mode. 0:NS Detect 1:Ping Detect 2:Always On
-z <value></value>	It means to set Ping Detect TTL (0-255). <value>: Enter 0-255.</value>
-x <hostname addr="" ipv6=""></hostname>	It means to set Ping Detect Host (hostname or IPv6 address). <hostname addr="" ipv6="">: Enter a hostname or an IPv6 address.</hostname>
-i <value></value>	It means to set ipv6 connection interval. <value>: Enter a number (1500-60000 (unit:10ms)).</value>
-b <0/1>	It means to enable DNSv6 based on DHCPv6. 1 = on 0 = off
-R <0/1>	It means to Enable RIPng. 1 = on 0 = off

```
> ip6 internet -W 1 -M 2 -u userid -p passwd -s broker.freenet6.net
This setting will take effect after rebooting.
Please use "sys reboot" command to reboot the router.
> system reboot
```

Telnet Command: ip6 neigh

This command allows you to display IPv6 neighbour table.

Syntax

```
ip6 neigh -s <inet6_addr> <eth_addr> <LAN1/..LAN4/ WAN1/ USB>
ip6 neigh -d <inet6_addr> <LAN1/..LAN4/ WAN1/ USB>
ip6 neigh -a <inet6_addr> <-N LAN1/..LAN4/ WAN1/ USB>
```

Syntax Description

Parameter	Description
-s <inet6_addr> <eth_addr> <lan1 lan4="" usb="" wan1=""></lan1></eth_addr></inet6_addr>	It means to add a neighbour. <inet6_addr>: Enter an IPv6 address. <eth_addr>: Enter a submask address. <lan1 lan4="" usb="" wan1="">: Specify an interface for the neighbor.</lan1></eth_addr></inet6_addr>
-d <inet6_addr> <lan1 lan4="" usb="" wan1=""></lan1></inet6_addr>	It means to delete a neighbour. <inet6_addr>: Enter an IPv6 address. <lan1 lan4="" usb="" wan1="">: Specify an interface for the neighbor.</lan1></inet6_addr>
-a <inet6_addr> <-N LAN1/LAN4/ WAN1/ USB></inet6_addr>	It means to show neighbour status. <inet6_addr>: Enter an IPv6 address. <lan1 lan4="" usb="" wan1="">: Specify an interface for the neighbor.</lan1></inet6_addr>

Telnet Command: ip6 pneigh

This command allows you to add a proxy neighbour.

Syntax

```
ip6 pneigh -s <inet6_addr> < LAN1/..LAN4/ WAN1/ USB>
ip6 pneigh -d <inet6_addr> <LAN1/..LAN4/ WAN1/ USB>
ip6 pneigh -a <inet6_addr> <-N LAN1/..LAN4/ WAN1/ USB>
```

Syntax Description

Parameter	Description
-s <inet6_addr> < LAN1/LAN4/WAN1/ USB ></inet6_addr>	It means to add a proxy neighbour. <inet6_addr>: Enter an IPv6 address. <lan1 lan4="" usb="" wan1="">: Specify an interface for the proxy neighbor.</lan1></inet6_addr>
-d <inet6_addr> < LAN1/LAN4/WAN1/USB ></inet6_addr>	It means to delete a proxy neighbour. <inet6_addr>: Enter an IPv6 address. <lan1 lan4="" usb="" wan1="">: Specify an interface for the proxy neighbor.</lan1></inet6_addr>
-a <inet6_addr> <-N LAN1/LAN4/WAN1/USB ></inet6_addr>	It means to show proxy neighbour status. <inet6_addr>: Enter an IPv6 address. <lan1 lan4="" usb="" wan1="">: Specify an interface for the proxy neighbor.</lan1></inet6_addr>

Example

```
> ip6 neigh -s FE80::250:7FFF:FE12:300 LAN1
% Neighbour FE80::250:7FFF:FE12:300 successfully added!
>
```

Telnet Command: ip6 route

This command allows you to IPv6 route policy.

Syntax

```
ip6 route -s refix> <prefix-length> <gateway> <LAN1/..LAN4/WAN1/ USB/VPN1/..VPN32>
<-D>
```

ip6 route -d cprefix> cprefix-length>

ip6 route -a <LAN1/..LAN4/WAN1/ USB/VPN1/..VPN32>

ip6 route -/

Parameter	Description
-s <pre>-s <pre>-s <pre>cynefix> <pre><pre><pre>cynefix> < cynefix> < LAN1/LAN4/WAN1/ USB/VPN1/VPN32> <-D></pre></pre></pre></pre></pre></pre>	It means to add a route. <pre><pre><pre><pre><pre><pre><pre><pre></pre></pre></pre></pre></pre></pre></pre></pre>

-d <prefix> <prefix-length></prefix-length></prefix>	It means to delete a route. <pre><pre><pre><pre><pre><pre><pre><pre></pre></pre></pre></pre></pre></pre></pre></pre>
-a <lan1 <br="" lan4="" wan1="">USB/VPN1/VPN32></lan1>	It means to show the route status. <lan1 dmz="" lan8="" usb1="" usb2="" vpn1="" vpn32="" wan1="" wan2="">: It means to specify LAN or WAN or VPN interface for such address.</lan1>
-1	It means to clear the routing table.

```
> ip6 route -s FE80::250:7FFF:FE12:500 16 FE80::250:7FFF:FE12:100 LAN1
      Route FE80::250:7FFF:FE12:500/16 successfully added!
> ip6 route -a LAN1
PREFIX/PREFIX-LEN
                                    I/F METRIC FLAG NEXT-HOP
::0.0.0.1/128
                                   LAN1 0 U ::
FE80::/128
                                   LAN1 0 U ::
FE80::1F3A:8877:4D37:BAFD/128
                                   LAN1 0 U ::

                                   LAN1 256 U ::
FE80::/16
                                    LAN1 1024 UGS FE80::250:7FFF:FE12:100
FF00::/8
                                    LAN1 256 U ::
```

Telnet Command: ip6 ping

This command allows you to pin an IPv6 address or a host.

Syntax

ip6 ping <IPv6 address/host> [<LAN1|LAN2|...|LAN4|WAN1|USB>] <send count> <data_ size(1~1452)>

Syntax Description

Parameter	Description
IPv6 address/Host	It means to specify the IPv6 address or host for ping.
<ilan1 lan2="" lan4="" wan<br="">1/USB></ilan1>	It means to specify LAN or WAN interface for such address.

```
> ip6 ping 2001:4860:4860::8888 WAN1
Pinging 2001:4860:4860:8888 with 64 bytes of Data:
Receive reply from 2001:4860:4860:8888, time=330ms
Receive reply from 2001:4860:4860:8888, time=330ms
Receive reply from 2001:4860:4860:8888, time=330ms
Receive reply from 2001:4860:4860:8888, time=330ms
Receive reply from 2001:4860:4860:8888, time=330ms
Receive reply from 2001:4860:4860:8888, time=330ms
Packets: Sent = 5, Received = 5, Lost = 0 <% loss>
>
```

Telnet Command: ip6 tracert

This command allows you to trace the routes from the router to the host.

Syntax

ip6 tracert <IPV6 address/Host> <LAN1|LAN2|...|LAN4|WAN1|USB>

Syntax Description

Parameter	Description
IPV6 address/Host	It means to specify the IPv6 address or host for ping.
<lan1 <br="" dmz="" lan8="" wan1="">WAN2/USB1/USB2></lan1>	It means to specify an interface for such address.

Example

Telnet Command: ip6 tspc

This command allows you to display TSPC status.

Syntax

ip6 tspc < ifno>

Syntax Description

Parameter	Description
ifno	It means the connection interface.
	Ifno=1 (means WAN1)
	Info=2 (means WAN2)

```
DrayTek> ip6 tspc 1
Tunnel Broker: broker.freenet6.net
Status: Idle
>
```

Telnet Command: ip6 radvd

This command allows you to enable or disable RADVD server.

Syntax

lp6 radvd <LAN1/..LAN4> <-<command> <parameter>/ ... >

Syntax Description

Parameter	Description
<command/> <parameter>/></parameter>	The available commands with parameters are listed below. <> means that you can Enter several commands in one line.
-s <0/1>	It means to enable or disable the default lifetime of the RADVD server. 1: Enable the RADVD server. 0: Disable the RADVD server.
-D <0/1/2>	It means to set RDNSS Disable/Enable/Deploy (0/1/2) when WAN is up.
-d <lifetme></lifetme>	It means to set RA default lifetime.
-i <lifetme></lifetme>	It means to set RA min interval time(sec).
-I <lifetme></lifetme>	It means to set RA MAX interval time(sec).
-h <hoplimit></hoplimit>	It means to set RA hop limit.
-m <mtu auto=""></mtu>	It means to set RA MTU, 1280-1500. mtu: auto - auto select MTU from WAN,
-e <time></time>	It means to set reachable time.
-a <time infinity=""></time>	It means to set retransmit timer /infinity.
-p <0/1/2>	It means to set radvd default preference Low/Medium/High. 0-low 1-medium 2-high
- <i>V</i>	It means to view radvd configuration.
-V	It means to view setting in RA.
-L <time infinity=""></time>	It means to set prefix valid lifetime.
-P <time infinity=""></time>	It means to set prefix preferred lifetime.
-r <num></num>	It means to to set RA test for item. <num>: 0, 121, 124 0: default, 121: logo 121, 124: logo 124</num>
-R	It means to reload Config and send RA for subnets.
-u	It means to view MTU on all interfaces.

```
> ip6 radvd LAN1 -s 1
% [LAN1] setting !
% Enable LAN1 radvd OK!
> ip6 radvd LAN1 -d 1800
% [LAN1] setting !
```

```
% Set default lifetime ok: 1800 !
> ip6 radvd LAN1 -V
% [LAN1] setting !
% Default Lifetime : 0 seconds
% min interval time: 200 seconds
% MAX interval time: 600 seconds
% Hop limit : 64
% MTU : 1280
% Reachable time : 0
% Retransmit time : 0
% Preference : Medium
>
```

Telnet Command: ip6 mngt

This command allows you to manage the settings for access list.

Syntax

ip6 mngt list

ip6 mngt list [add <Index> <IPv6 Object Index> /remove <Index> /flush>

ip6 mngt status

ip6 mngt <internet/ http/telnet/ping/https/ssh/enforce_https> <on/off>

Syntax Description

Parameter	Description
list	It means to show the setting information of the access list.
add <index> <ipv6 object<br="">Index> remove <index> flush></index></ipv6></index>	It means to add an IPv6 address which can be used to execute management through Internet. <index>: 1 to 10. Ten profiles can be set for IPv6 access list. <ipv6 index="" object="">: It means the index number of IP object (1 to 64) or keyword object (1 to 200). remove <index>: It means to remove (delete) the specified IP/Keyword object.</index></ipv6></index>
flush	It means to clear the IPv6 access table.
status	It means to show the status of IPv6 remote management.
internet/ http/telnet/ping/https/ssh /enforce_https	These protocols are used for accessing Internet.
on/off	It means to enable (on) or disable (off) the Internet accessing through http/telnet/ping.

```
internet access : off, telnet : off, http : off, https : off, ssh :
off, ping : off, enforce_https : off
```

Telnet Command: ip6 online

This command allows you to check the online status of IPv6 LAN /WAN.

Syntax

ip6 online <WAN1/USB>

Syntax Description

Parameter	Description
<wan1 usb=""></wan1>	It means the connection interface.

Example

```
> ip6 online WAN1
% WAN1 online status :
% IPv6 WAN1 TSPC
% Default Gateway : ::
% Interface : DOWN
% UpTime : 00:00:00
% IPv6 DNS Server: :: Static
% IPv6 DNS Server: :: Static
% IPv6 DNS Server: :: Static
% IPv6 DNS Server: :: Static
% Tx packets = 0, Tx bytes = 0, Rx packets = 0, Rx bytes = 0
% MTU Onlink: 1280 , Config MTU : 0
>
```

Telnet Command: ip6 aiccu

This command allows you to set IPv6 settings for WAN interface with connection type of AICCU.

Syntax

```
ip6 aiccu -i <ifno> -r
ip6 aiccu -i <ifno> -s
```

Syntax Description

Parameter	Description
<lfno></lfno>	It means the connection interface. 1=WAN1 2=WAN2
-r	It means to remove (delete) the specified index number with IPv6 settings.
-S	It means to display the AICCU status.

```
> ip6 aiccu -i 1 -s
Status: Idle
>
```

Telnet Command: ip6 ntp

This command allows you to set IPv6 settings for NTP (Network Time Protocols) server.

Syntax

ip6 ntp -h ip6 ntp -v

ip6 ntp *-p <0/1>*

Syntax Description

Parameter	Description
-h	It is used to display the usage of such command.
-V	It is used to show the NTP state.
-p <0/1>	It is used to specify NTP server for IPv6. 0 - Auto 1 - First Query IPv6 NTP Server.

Example

```
> ip6 ntp -p 1
% Set NTP Priority: IPv6 First
```

Telnet Command: ip6 lan

This command allows you to set IPv6 settings for LAN interface.

Syntax

ip6 lan -/ n <-</pre>!:w:d:D:m:o:s> <parameter> / ... >

Parameter	Description
-h	It is used to display the usage of such command.
-l <n></n>	It means to selete LAN interface to be set. n= 1: LAN1 n= 2: LAN2, x: LANx. Default is LAN1
-W <n></n>	It means to selete WAN interface to be primary interface. n= 0: None, n=1: WAN1, n=2: WAN2, x: WANx.
-d <server></server>	It means to set 1st DNS Server IP. <server>: Enter the IPv6 Address.</server>
-D <server></server>	It means to set 2nd DNS Server IP. <server>: Enter the IPv6 Address.</server>
-m <n></n>	It means to set ipv6 LAN management. n=0:OFF n=1:SLAAC. Default is SLAAC n=2:DHCPv6
-0 <n></n>	It means to enable Other option(O-bit) flag. (O-bit is redundant when management is DHCPv6) n=0: Disable n=1: Enable.
-e <n></n>	It means to add an extension WAN.

	n: 1: WAN1, 2: WAN2, x: WANx.
-E <n></n>	It means to delete an extension WAN.
	n: 1: WAN1 ,2: WAN2, x: WANx.
-b <map></map>	It means to set bit map(decimal) for extension WAN.
	<map>: 0: WAN1; 1: WAN2, n: WAN(n+1).</map>
-f <n></n>	It means to disable IPv6.
	n=1: Disable IPv6,
	n=0: Enable IPv6.
-R <n></n>	It means to enable /disable RIPng.
	n=1: Enable RIPng,
	n=0: Disable RIPng.
-s <n></n>	It means to show IPv6 LAN setting.
	n=0:show all. Default is show all.
	n=1 to 4: LAN1 to LAN4.
	n=9: DMZ.

```
> ip6 lan -l 2 -w 1 -d 2001:4860:4860::8888 -o 1 -f 0 -s 2
   Set LAN2!
  Set primary WAN1!
% Set 1st DNS server 2001:4860:4860::8888
   Set Other Option Enable!
  [LAN2] support ipv6!
This setting will take effect after rebooting.
Please use "sys reboot" command to reboot the router.
% [LAN2] setting:
% Primary WAN : WAN1
% Management
                 : SLAAC
% Other Option : Enable
% WAN Exten
                 : None
% Subnet ID
% Static IP(0) : ::/0
                 [ifno: 0, enable: 0]
% Static IP(1)
                : ::/0

```

Telnet Command: ip6 session

This command allows you to set sessions limit for IPv6 address.

Syntax

ip6 session on

ip6 session off

ip6 session default <num>

ip6 session status

ip6 session show

ip6 session add <IP1-IP2> <num>

ip6 session del <IP1>/<all>

Syntax Description

Parameter	Description
on	It means to turn on session limit for each IP.
off	It means to turn off session limit for each IP.
default <num></num>	It means to set the default number of session num limit. <num>: Enter a number.</num>
status	It means to display the current settings.
show	It means to display all IP range session limit settings.
add <ip1-ip2><num></num></ip1-ip2>	<add del="">: It means to add the session limit for an IPv6 range. <ip1-ip2>: Specify a range for IPv6 addresses. <num>: Enter a number.</num></ip1-ip2></add>
del <ip1> /all</ip1>	<pre>: It means to delete the session limit for an IPv6 range. <ip1> : Specify the first IPv6 address within the IPv6 range. all: Delete all the session limits.</ip1></pre>

```
> ip6 session on
> ip6 session add 2100:ABCD::2-2100:ABCD::10 100
> ip6 session status

IPv6 range:
    2100:ABCD::2 - 2100:ABCD::10 : 100

Current ip6 session limit is turn on

Current default session number is 100
```

Telnet Command: ip6 bandwidth

This command allows you to set IPv6 settings for bandwidth control.

Syntax

ip6 bandwidth on

ip6 bandwidth off

ip6 bandwidth default <tx_rate> <rx_rate>

ip6 bandwidth status

ip6 bandwidth show

ip6 bandwidth add <IP1-IP2> <tx><rx><shared>

ip6 bandwidth del <IP1-IP2> /all

Syntax Description

Parameter	Description
on	It means to turn on bandwidth limit for each IP.
off	It means to turn off bandwidth limit for each IP.
default <tx_rate> <rx_rate></rx_rate></tx_rate>	It means to set the default transmission (tx), receiving (rx) rate of bandwidth limit (0-30000 Kbps/Mbps). <tx_rate>: Enter a number. <rx_rate>: Enter a number.</rx_rate></tx_rate>
status	It means to display the current settings.
show	It means to display all IP range bandwidth limit settings.
add <ip1-ip2> <tx><rx><shared></shared></rx></tx></ip1-ip2>	<add>: It means to add the bandwidth limit for an IPv6 range. : It means to delete the bandwidth limit for an IPv6 range by first IP (IP1) or 'del all'. <ip1-ip2> - Specify a range for IPv6 addresses. <tx><rx>: It means the bandwidth limit for transmission and receivign rate. <shared>: It means the bandwidth will be shared for the IPv6 range.</shared></rx></tx></ip1-ip2></add>
del <ip1-ip2> /all</ip1-ip2>	It means to delete the bandwidth limit for an IPv6 range by first IP (IP1) or 'del all'. <ip1-ip2> - Specify a range for IPv6 addresses. all: Delete all the bandwidth limits.</ip1-ip2>

```
> ip6 bandwidth on
> ip6 bandwidth add 2001:ABCD::2-2001:ABCD::10 512 5M shared
> ip6 bandwidth status
    IPv6 range:
        2001:ABCD::2 - 2001:ABCD::10 : Tx:512K Rx:5M shared
        Current ip6 Bandwidth limit is turn on
        Current default ip6 Bandwidth rate is Tx:2000K Rx:8000K bps
>
```

Telnet Command: ipf view

IPF users to view the version of the IP filter, to view/set the log flag, to view the running IP filter rules.

Syntax

ipf view [OPTION]

Syntax Description

Parameter	Description
-V	It means to show the version of this IP filter.
-d	It means to show the running data filter rules.
-h	It means to show the hit-number of the filter rules.
-r	It means to show the running call and data filter rules.
-t	It means to display all the information at one time.
-Z	It means to clear a filter rule's statistics.
-Z	It means to clear IP filter's gross statistics.

Example

```
> ipf view -V
ipf: IP Filter: v3.3.1 (1852)
Kernel: IP Filter: v3.3.1
Running: yes
Log Flags: 0x6059749c = block, nomatch
Default: pass all, Logging: available
>
```

Telnet Command: ipf set

This command is used to set general rule, filter set and filter rule for firewall.

Syntax

```
ipf set [Options]
ipf set <SET_NO><Options>
ipf set <SET_NO> rule <RULE_NO> <Options>
```

Parameter	Description	
ipf set [options]	It means to set the firewall general setup and default rule.	
ipf set <set_no><options></options></set_no>	It means to set the firewall fiter set including comments and next fiter set.	
ipf set <set_no> rule <rule_no> <options></options></rule_no></set_no>	It means to set the firewall rule in a filter set. For detailed information, refer to Telnet Command: ipf rule.	
About ipf set [options]		
-V	It means to view the configuration of general set.	
-d <p1></p1>	It means to setup Data Filter. <p1>: Specify the index number (1 to 12) of the set profile. To disable the setting, enter "0".</p1>	

- p <p1> <p2></p2></p1>	It means to setup actions for packet not matching any rule and whether record syslog.
	<p1>: Type "0" to let packets not matching any rule pass; Type "1" to block the packets not matching any rule.</p1>
	<p2>: "0" means the log related to rule matching will not be recorded on Syslog; "1" means the log related to rule matching will be recorded on Syslog.</p2>
	For example, to set pass for packet not matching any rule and enable syslog, -p 0 1.
-R <v4 v6=""> <enable disable=""></enable></v4>	It means to accept routing packet from WAN. <v4 v6="">: IPv4 or IPv6.</v4>
	<pre><enable disable="">: Enter 0 (enable) or 1 (disable). Set Accept routing packet from WAN by IPv4, please enter -R v4 0.</enable></pre>
	Set Accept routing packet from WAN by IPV4, please enter -R V4 U.
-L <p1></p1>	It means to enable or disable the Strict Security Firewall function. <p1>: Enter 1(enable) or 0 (disable).</p1>
-C <p1></p1>	It means to setup Code Page.
	<pre><p1>: Enter a code page number (0 to 20). For example, ipf set -C 20.</p1></pre>

14 .m 1m 2.	
-M <p1> <p2></p2></p1>	It means to setup APP Enforcement and Syslog. <p1>: Enter a number (0 to 32). In which, 0 means none; 1 to 32 mens the index number of the profile.</p1>
	<
-U <p1> <p2></p2></p1>	It means to setup URL Content Filter for packets not matching any rule.
	<p1>: Enter a number (0 to 8). In which, 0 means none; 1 to 8 mens the index number of the profile.</p1>
	<p2>: "0" means the log related to URL Content Filter will not be recorded on Syslog; "1" means the log related to URL Content Filter will be recorded on Syslog.</p2>
-W <p1> <p2></p2></p1>	It means to setup Web Content Filter for packets not matching any rule.

	<p1>: Enter a number (0 to 8). In which, 0 means none; 1 to 8 mens the index number of the profile.</p1>
	<p2>: "0" means the log related to Web Content Filter will not be recorded on Syslog; "1" means the log related to Web Content Filter will be recorded on Syslog.</p2>
-D <p1> <p2></p2></p1>	It means to setup DNS Filter for packets not matching any rule.
	<pre><p1>: Enter a number (0 to 8). In which, 0 means none; 1 to 8 mens the index number of the profile.</p1></pre>
	<p2>: "0" means the log related to DNS Filter will not be recorded on Syslog; "1" means the log related to DNS Filter will be recorded on Syslog.</p2>
-a <p1></p1>	It means to configure the advanced settings.
-f <p1></p1>	It means to accept large incoming fragmented UDP or ICMP packets. <p1>: Enter 1(enable) or 0 (disable).</p1>
-t <p1></p1>	It means to enable or disable the Transparent Mode. <p1>: Enter 1(enable) or 0 (disable).</p1>
-E <p1> <p2></p2></p1>	It means to set the maximum count for session limitation.
	<p1>: Enter a number (0 to 50000)</p1>
	<p2>: "0" means the log related to session control will not be recorded on Syslog; "1" means the log related to session control will be recorded on Syslog.</p2>
-Q <p1> <p2></p2></p1>	It means to set the QoS Class.
	<p1>: Enter a number (0 to 4).</p1>
	0: None
	1: Class 1
	2: Class 2
	3: Class 3
	4: Default Class
	onSyslog; "1" means the log related to QoS Class will be recorded on Syslog.
-Y <p1> <p2></p2></p1>	It means to set the User Management.
	<p1>: Enter a number (-1 to 2).</p1>
	-1: None
	0: All
	1: user object
	2: user group
	<p2>: 1 to 200(if p1 is set with 1, user object) or 1 to 32(if p1 is set with 2, user group)</p2>
-y <p1></p1>	It means the log related to User Management will be or be not recorded on Syslog.
	<pre><pre><pre><pre><pre><pre><pre><pre></pre></pre></pre></pre></pre></pre></pre></pre>
-W <n1></n1>	<p1>: Enter 1(enable) or 0 (disable).</p1>
-w <p1></p1>	
,	<pre><p1>: Enter 1(enable) or 0 (disable). It means to set the window size of TCP protocol. <p1>: Enter a value (0 to 65535).</p1></p1></pre>
-w <p1> -A <p1></p1></p1>	<p1>: Enter 1(enable) or 0 (disable). It means to set the window size of TCP protocol.</p1>
,	<pre><p1>: Enter 1(enable) or 0 (disable). It means to set the window size of TCP protocol. <p1>: Enter a value (0 to 65535). It means to enable or disable the function of packet capture. <p1>: Enter 1(enable) or 0 (disable).</p1></p1></p1></pre>
-A <p1></p1>	<pre><p1>: Enter 1(enable) or 0 (disable). It means to set the window size of TCP protocol. <p1>: Enter a value (0 to 65535). It means to enable or disable the function of packet capture. <p1>: Enter 1(enable) or 0 (disable).</p1></p1></p1></pre>
-A <p1> About ipf set <set_no> <0</set_no></p1>	<pre><p1>: Enter 1(enable) or 0 (disable). It means to set the window size of TCP protocol. <p1>: Enter a value (0 to 65535). It means to enable or disable the function of packet capture. <p1>: Enter 1(enable) or 0 (disable). Options> It means to set comment for a filter set.</p1></p1></p1></pre>

```
<NEXT_SET_NO>: Enter a number (1 to 12).
For example, ipf set 1 -n 2.
```

 [v] Enable Strict Security Firewall
```

Telnet Command: ipf rule

This command is used to set filter rule for firewall.

Syntax

```
ipf rule s r [-<command> <parameter> | ...
ipf rule s r -v
```

Parameter	Description
S	It means the Filter Set.

	s: Enter a value (1 to 12).
r	It means Filter Rule
,	r: Enter a value (1~7).
[<command/>	The available commands with parameters are listed below.
<pre><parameter>]</parameter></pre>	[] means that you can type in several commands in one line.
-e <0/1>	It means to enable or disable the rule setting.
-0 (0) 1>	0: disable
	1:enable
-V	It is used to show current filter rule settings.
-D <value></value>	It means to set the direction of packet flow. It is for Data Filter
	only.
	0, LAN/RT/VPN -> WAN
	1, WAN -> LAN/RT/VPN
	2, LAN/RT/VPN -> LAN/RT/VPN
-l " <e d=""> <para1, para2,="">"</para1,></e>	It means to set incoming interface.
	e: Enable the function.
	d: Disable the function.
	Para1, para2,: all, LAN1, LAN2,, LAN4, DMZ, RT, VPN, WAN1,, WAN6
-0 " <e d=""> <para1,< td=""><td>It means to set outgoing interface.</td></para1,<></e>	It means to set outgoing interface.
para2,>"	e: Enable the function.
	d: Disable the function.
	Para1, para2,: Available values include all, LAN1, LAN2,LAN8, RT, VPN, WAN1, WAN2,WAN7
	Exampe: > ipf rule 3 1 -e 1 -0 "e LAN2"
-s "o/o6/g/g6/c <field></field>	It means to specify source IP object, IP group.
<obj>"</obj>	o: Indicates "IPv4 object".
	o6: Indicates IPv6 object".
	g: Indicates "IPv4 group".
	g6: Indicates "IPv6 group".
	c: Indicates country object.
	field: Indicates the quantity of objects/groups that can be set for this rule at one time.
	-2 object profiles are allowed for IPv4
	-2 group profiles are allowed for IPv4 group
	-3 object profiles are allowed for IPv6
	-1 group profiles is allowed for IPv6 group
	obj: indicates index number of object or index number of groupRange for IPv4, from 1 to 192, 0 means none.
	-Range for IPv4 group, from 1 to 32, 0 means none.
	-Range for IPv6, from 1 to 64, 0 means none.
	-Range for IPv6 group, from 1 to 32, 0 means none.
	-Ranges for country object, from 1 to 32.
	For example, -s "o 1 2" means IPv4 object profile 1 and 2 are set as souce IP.
	Exampe: > ipf rule 3 1 -e 1 -s "o 1 2"
-s "u <address type=""> <start IP Address> <end address="" ip=""></end></start </address>	It means to configure source IP address including address type, start IP address, end IP address and address mask.
/ <address mask="">"</address>	u : It means "user defined".
	Address Type: Type the number (representing different address
	type).
	0 : Subnet Address

	1 : Single Address
	2 : Any Address
	3: Range Address
	Example:
	Set Subnet Address => -s "u 0 192.168.1.10 255.255.255.0"
	Set Single Address => -s "u 1 192.168.1.10 "
	Set Any Address => -s "u 2 "
	Set Range Address => -s "u 3 192.168.1.10 192.168.1.15"
-d "o o6 g g6 c <field></field>	It means to specify destination IP object, IP group.
<obj>"</obj>	o: Indicates "IPv4 object".
	o6: Indicates IPv6 object".
	g: Indicates "IPv4 group".
	g6: Indicates "IPv6 group".
	c: Indicates country object.
	field: Indicates the quantity of objects/groups can be set for this rule at one time.
	-2 object profiles are allowed for IPv4
	-2 group profiles are allowed for IPv4 group
	-3 object profiles are allowed for IPv6
	-1 group profiles is allowed for IPv6 group
	obj: indicates index number of object or index number of groupRange for IPv4, from 1 to 192, 0 means none.
	-Range for IPv4 group, from 1 to 32, 0 means none.
	-Range for IPv6, from 1 to 64, 0 means none.
	-Range for IPv6 group, from 1 to 32, 0 means none.
	-Ranges for country object, from 1 to 32.
	For example, -s "o 1 2" means IPv4 object profile 1 and 2 are set as destination IP.
	Exampe: > ipf rule 3 1 -e 1 -d "o 2 2"
-d "u <address type=""> <start IP Address> <end address="" ip=""></end></start </address>	It means to configure destination IP address including address type, start IP address, end IP address and address mask.
/ <address mask="">"</address>	u : It means "user defined".
	Address Type: Type the number (representing different address type).
	0 : Subnet Address
	1 : Single Address
	2 : Any Address
	3 : Range Address
	Example:
	Set Subnet Address => -d "u 0 192.168.1.10 255.255.255.0"
	Set Single Address => -d "u 1 192.168.1.10 "
	Set Any Address => -d "u 2 "
	1
	Set Range Address => -d "u 3 192.168.1.10 192.168.1.15"
-S o/g <obj></obj>	It means to specify Service Type object.
	o: indicates "object" profile.
	g: indicates "group" profile.
	<obj>: indicates index number of object or index number of group. Available settings range from 1-96. For example, -S "o 1" means the first service type object profile.</obj>
-S "u <protocol></protocol>	It means to configure advanced settings for Service Type, such as
<pre><source_port_value> <dostination_part_value;"< pre=""></dostination_part_value;"<></source_port_value></pre>	protocol and port range.
<destination_port_vale>"</destination_port_vale>	u: it means "user defined".
	<pre><pre><pre><pre><pre><pre><pre><pre></pre></pre></pre></pre></pre></pre></pre></pre>

	ICMP(1), ICMPv6(58), Other(other)
	<pre><source_port_value> :</source_port_value></pre>
	1 : Port OP, range is 0-3. 0:= =, 1:!=, 2:>, 3:<
	3 : Port range of the Start Port Number, range is 1-65535.
	5 : Port range of the End Port Number, range is 1-65535.
	<pre><destination_port_value>:</destination_port_value></pre>
	2 : Port OP, range is 0-3, 0:==, 1:!=, 2:>, 3:<
	4 : Port range of the Start Port Number, range is 1-65535.
	6: Port range of the End Port Number, range is 1-65535.
-f <value></value>	It means to set fragment type.
	0 : Don't care.
	1 : Unfragmented.
	2 : Fragmented.
	3 : Too Short
-F " <param 0=""/> <param 1=""/> "	It means the Filter action you can specify.
	<pre><param 0=""/>: Enter the number to set the filter action.</pre>
	0 : Pass Immediately.
	1 : Block Immediately.
	2 : Pass if no further match.
	3 : Block if no further match.
	<param 1=""/> : Let the log be recorded on Syslog.
	0 : Disable Log.
	1 : Enable Log.
-m " <param 0=""/> <param 1=""/> "	
-III <paidiii u=""> <paidiii i=""></paidiii></paidiii>	It means to set MAC Bind IP type and the Syslog.
	<pre><pre><pre><pre></pre></pre><pre><pre><pre><pre><pre><pre></pre></pre><pre><pre><pre><pre><pre><pre><pre><</pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre>
	0 : Non-Strict.
	1 : Strict.
	<param 1=""/> : Let the log be recorded on Syslog.
	0 : Disable Log.
	1 : Enable Log.
-Y <param 0=""/> <param 1=""/>	It means to set the User Management.
	<pre><param 0=""/>: Enter the number to choose the type.</pre>
	4 11
	-1: None.
	-1 : None. 0 : All.
	0 : All.
	0 : All. 1 : User Object
	0 : All. 1 : User Object 2 : User group <param 1=""/> : Let the log be recorded on Syslog if <param 0=""/> is set
	0: All. 1: User Object 2: User group <param 1=""/> : Let the log be recorded on Syslog if <param 0=""/> is set with None/ALL.
	0: All. 1: User Object 2: User group <param 1=""/> : Let the log be recorded on Syslog if <param 0=""/> is set with None/ALL. 0: Disable.
-y <value></value>	0: All. 1: User Object 2: User group <param 1=""/> : Let the log be recorded on Syslog if <param 0=""/> is set with None/ALL. 0: Disable. 1: Enable. Enter the the user object number (1 to 200) / group number (1 to
·	0: All. 1: User Object 2: User group <param 1=""/> : Let the log be recorded on Syslog if <param 0=""/> is set with None/ALL. 0: Disable. 1: Enable. Enter the the user object number (1 to 200) / group number (1 to 32) if <param 0=""/> is set with User Object. It means the log related to User Management will be or be not recorded on Syslog. <value>: Enter 1(enable) or 0 (disable)</value>
-y <value> -L <param 0=""/> <param 1=""/></value>	0: All. 1: User Object 2: User group <param 1=""/> : Let the log be recorded on Syslog if <param 0=""/> is set with None/ALL. 0: Disable. 1: Enable. It means the log related to User Management will be or be not recorded on Syslog. <value>: Enter 1(enable) or 0 (disable) It means to set the maximum count for the session limitation. <param 0=""/>: Enter the number (0 to 50000) to choose the type. <param 1=""/>: Let the log be recorded on Syslog.</value>
	0: All. 1: User Object 2: User group <param 1=""/> : Let the log be recorded on Syslog if <param 0=""/> is set with None/ALL. 0: Disable. 1: Enable. Enter the the user object number (1 to 200) / group number (1 to 32) if <param 0=""/> is set with User Object. It means the log related to User Management will be or be not recorded on Syslog. <value>: Enter 1(enable) or 0 (disable) It means to set the maximum count for the session limitation. <param 0=""/>: Enter the number (0 to 50000) to choose the type.</value>

-q <param 0=""/> <param 1=""/>	It means to set the classification for QoS.
	<param 0=""/> :
	1- Class 1,
	2 - Class 2,
	3 - Class 3,
	4 - Other
	<param 1=""/> : Let the log be recorded on Syslog.
	0 : Disable.
	1 : Enable.
-I <param 0=""/> <param 1=""/>	It means load balance policy.
	Such function is used for "debug" only.
	<param 0=""/> : Enter 0, 1, 2, or 3.
	0:Auto-Select,
	1:WAN 1.
	2:WAN 2.
	3:WAN 3.
	<param 1=""/> : Enter 0 or 1.
	0:Disable Log.
	_
	1:Enable Log.
-a " <param 0=""/> <param 1=""/> "	It means to specify which APP Enforcement profile will be applied.
	<param 0=""/> : Available settings range from 0 ~ 32. "0" means no
	profile will be applied.
	<param 1=""/> : Let the log be recorded on Syslog.
	0 : Disable.
	1 : Enable.
-u <param 0=""/> <param 1=""/>	It means to specify which URL Content Filter profile will be applied.
	<param 0=""/> : Available settings range from 0 ~ 8. "0" means no profile will be applied.
	<param 1=""/> : Let the log be recorded on Syslog.
	0 : Disable.
	1 : Enable.
-w " <param 0=""/> <param 1=""/> "	It means to specify which Web Content Filter profile will be applied. <param 0=""/> : Available settings range from 0 ~ 8. "0" means no profile will be applied.
	<param 1=""/> : Let the log be recorded on Syslog.
	0 : Disable.
	1 : Enable.
	It means to specify which DNS Filter profile will be applied.
-II <raidiii u=""> <raidiii i=""></raidiii></raidiii>	<param 0=""/> : Available settings range from 0 ~ 8. "0" means no
	profile will be applied.
	<param 1=""/> : Let the log be recorded on Syslog.
	0 : Disable.
	1 : Enable.
-N <value></value>	It means to set the Next Filter Set.
	<value> : Available settings range from 0 ~ 12. "0" means no profile</value>
	will be applied.
	0 : None
	1 : Set#1; 2: Set#2, and so on.
-c <0~20>	It means to set code page. Different number represents different code page.
	0. None

Telnet Command: ipf flowtrack

DNS Filter

This command is used to set and view flowtrack sessions.

Syntax

ipf flowtrack set [-re]

ipf flowtrack view [-f]

ipf flowtrack -i<IP address> -p<value>-t<value>

Parameter	Description
-r	It means to refresh the flowtrack.
-е	It means to enable or disable the flowtrack.
-f	It means to show the sessions state of flowtrack. If you do not specify any IP address, then all the session state of flowtrack will be displayed.
-b	It means to show all of IP sessions state.

```
> ipf flowtrack set -r
Refresh the flowstate ok
> ipf flowtrack view -f
Start to show the flowtrack sessions state:
ORIGIN>> 192.168.1.11:59939 ->
                                     8.8.8.8: 53 ,ifno=0
             8.8.8.8: 53 -> 192.168.1.11:59939 ,ifno=3
REPLY >>
     proto=17, age=93023180(3920), flag=203
ORIGIN>> 192.168.1.11:15073 ->
                                     8.8.8.8: 53 ,ifno=0
REPLY >>
             8.8.8.8: 53 -> 192.168.1.11:15073 ,ifno=3
     proto=17, age=93025100(2000), flag=203
ORIGIN>> 192.168.1.11: 7247 ->
                                     8.8.8.8: 53 ,ifno=0
             8.8.8.8: 53 -> 192.168.1.11: 7247 ,ifno=3
      proto=17, age=93020100(7000), flag=203
End to show the flowtrack sessions state
> ipf flowtrack set -e
Current flowtrack OFF
Refresh the flowstate ok
```

Telnet Command: Log

This command allows users to view log for WAN interface such as call log, IP filter log, flush log buffer, etc.

Syntax

log [-cfhiptwx?] [-F a | c | f | w]

Syntax Description

Parameter	Description
-C	It means to show the latest call log.
-f	It means to show the IP filter log.
-F	It means to show the flush log buffer. a: flush all logs c: flush the call log f: flush the IP filter log w: flush the WAN log
-h	It means to show this usage help.
- <i>р</i>	It means to show PPP/MP log.
-t	It means to show all logs saved in the log buffer.
-W	It means to show WAN log.
-X	It means to show packet body hex dump.

```
> log -w

```

Telnet Command: mngt ftpport

This command allows users to set FTP port for management.

Syntax

mngt ftpport <FTP port>

Syntax Description

Parameter	Description
FTP port	It means to Enter the number for FTP port. The default setting is 21.

Example

```
> mngt ftpport 21
% Set FTP server port to 21 done.
```

Telnet Command: mngt httpport

This command allows users to set HTTP port for management.

Syntax

mngt httpport <Http port>

Syntax Description

Parameter	Description
Http port	It means to enter the number for HTTP port. The default setting is 80.

```
> mngt httpport 80
% Set web server port to 80 done.
```

Telnet Command: mngt httpsport

This command allows users to set HTTPS port for management.

Syntax

mngt httpsport <Https port>

Syntax Description

Parameter	Description
Https port	It means to Enter the number for HTTPS port. The default setting is 443.

Example

```
> mngt httpsport 443
% Set web server port to 443 done.
```

Telnet Command: mngt sslvpnport

This command allows users to set SSL VPN port for management.

Syntax

mngt sslvpnport < SSL VPN port>

Syntax Description

Parameter	Description
SSL VPN port	It means to type the number for SSL VPN port. The default setting is 443.

Example

```
> mngt sslvpnport 1010
% Set SSL VPN port to 1010 done.
```

Telnet Command: mngt telnetport

This command allows users to set telnet port for management.

Syntax

mngt telnetport <Telnet port>

Syntax Description

Parameter	Description
Telnet port	It means to Enter the number for telnet port. The default setting is 23.

```
> mngt telnetport 23
% Set Telnet server port to 23 done.
```

Telnet Command: mngt sshport

This command allows users to set SSH port for management.

Syntax

mngt sshport <ssh port>

Syntax Description

Parameter	Description
ssh port	It means to Enter the number for SSH port. The default setting is 22.

Example

```
> mngt sshport 23
% Set ssh port to 23 done.
```

Telnet Command: mngt noping

This command is used to pass or block Ping from LAN PC to the internet.

Syntax

mngt noping *on*mngt noping *off*mngt noping *viewlog*mngt noping *clearlog*

Syntax Description

Parameter	Description
on	All PING packets will be forwarded from LAN PC to Internet.
off	All PING packets will be blocked from LAN PC to Internet.
viewlog	It means to display a log of ping action, including source MAC and source IP.
clearlog	It means to clear the log of ping action.

Example

```
> mngt noping off
% No Ping Packet Out is OFF!!
```

Telnet Command: mngt defenseworm

This command can block specified port for passing through the router.

Syntax

mngt defenseworm *on*mngt defenseworm *off*mngt defenseworm *<add port>*mngt defenseworm *<del port>*mngt defenseworm *<viewlog>*

mngt defenseworm < clearlog>

Syntax Description

Parameter	Description
on	It means to activate the function of defense worm packet out.
off	It means to inactivate the function of defense worm packet out.
add port	It means to add a new TCP port for block.
del port	It means to delete a TCP port for block.
viewlog	It means to display a log of defense worm packet, including source MAC and source IP.
clearlog	It means to remove the log of defense worm packet.

Example

```
> mngt defenseworm add 21
Add TCP port 21
Block TCP port list: 135, 137, 138, 139, 445, 21
> mngt defenseworm del 21
Delete TCP port 21
Block TCP port list: 135, 137, 138, 139, 445
```

Telnet Command: mngt rmtcfg

This command can allow the system administrators to login from the Internet. By default, it is not allowed.

Syntax

```
mngt rmtcfg <status>
mngt rmtcfg <enable>
mngt rmtcfg <disable>
```

mngt rmtcfg < http/https/ftp/telnet/ssh/tr069/snmp/enforce_https> <on/off>

Syntax Description

Parameter	Description
status	It means to display current setting for your reference.
enable	It means to allow the system administrators to login from the Internet.
disable	It means to deny the system administrators to login from the Internet.
http/https/ftp/telnet/ssh/t r069/snmp/ enforce_https	It means to specify one of the servers/protocols for enabling or disabling.
on/off	on - enable the function. off - disable the function.

```
> mngt rmtcfg ftp on
Enable server fail
Remote configure function has been disabled
please enable by enter mngt rmtcfg enable
```

```
> mngt rmtcfg enable
%% Remote configure function has been enabled.
> mngt rmtcfg ftp on
%% FTP server has been enabled.
```

Telnet Command: mngt lanaccess

This command allows users to manage accessing into Vigor router through LAN port.

Syntax

```
mngt lanaccess -e < 0/1 > -s < value > -i < value > -l < value > mngt lanaccess -f mngt lanaccess -d mngt lanaccess -v mngt lanaccess -h
```

Syntax Description

Parameter	Description
-e <0/1>	It means to enable/disable the function. 0-disable the function. 1-enable the function.
-s <value></value>	It means to specify service offered. Available values include: FTP, HTTP, HTTPS, TELNET, SSH, None, All
-i <value></value>	It means the interface which is allowed to access. Available values include: LAN1~LAN8, IP Routed Subnet, None, All Note: LAN1 is always allowed for accessing into the router.
-l <value></value>	It means the IP object index allowed to access. Available values include: 1 to 192
-E <0/1>	It means to enable the function of specific IP allowed to be access. 0-disable the function. 1-enable the function.
-f	It means to flush all of the settings.
-d	It means to restore the factory default settings.
-V	It means to view current settings.

```
> mngt lanaccess -e 1
> mngt lanaccess -s FTP,TELNET
> mngt lanaccess -i LAN3
> mngt lanaccess -v
Current LAN Access Control Setting:
Current LAN Access Control Setting:
* Enable:Yes
* Service:
    - FTP:Yes
    - HTTP:No
```

```
- HTTPS:No
  - TELNET:Yes
  - SSH:No
  - TR069:No
  - Enforce HTTPS:No
* Subnet:
  - LAN 49: enabled
    - Specific IP(IP object:0) is disabled
  - LAN 50: enabled
    - Specific IP(IP object:0) is disabled
  - LAN 51: enabled
    - Specific IP(IP object:0) is disabled
  - LAN 52: enabled
    - Specific IP(IP object:0) is disabled
  - LAN 53: enabled
    - Specific IP(IP object:0) is disabled
  - LAN 54: enabled
    - Specific IP(IP object:0) is disabled
  - LAN 55: enabled
    - Specific IP(IP object:0) is disabled
  - LAN 56: enabled
    - Specific IP(IP object:0) is disabled
  - IP Routed Subnet 8: enabled
    - Specific IP(IP object:0) is disabled
```

Telnet Command: mngt echoicmp

This command allows users to reject or accept PING packets from the Internet.

Syntax

mngt echoicmp <enable>
mngt echoicmp <disable>

Syntax Description

Parameter	Description
enable	It means to accept the echo ICMP packet.
disable	It means to drop the echo ICMP packet.

Example

```
> mngt echoicmp enable
%% Echo ICMP packet enabled.
```

Telnet Command: mngt accesslist

This command allows you to specify that the system administrator can login from a specific host or network. A maximum of three IPs/subnet masks is allowed.

Syntax

mngt accesslist *list*mngt accesslist *add <index> <IP Object Index>*

mngt accesslist remove <index>
mngt accesslist flush

Syntax Description

Parameter	Description
list	It can display current setting for your reference.
add <index> <ip object<br="">Index></ip></index>	It means adding a new entry. <index>: Specify the number (1 to 10) of the entry. <ip index="" object="">: Specify the index number (1 to 192) of the IP object profile.</ip></index>
remove <index></index>	It means to delete the selected item. <index>: Specify the number (1 to 10) of the entry.</index>
flush	It means to remove all the settings in the access list.

Example

Telnet Command: mngt wanlogin

This command allows you to enable or disable WAN login function.

Syntax

mngt wanlogin *enable* mngt wanlogin *disable*

Example

```
> mngt wanlogin enable
%% wan login enabled.
>
```

Telnet Command: mngt snmp

This command allows you to configure SNMP for management.

Syntax

mngt snmp [-<command> <parameter> | ...]

Parameter	Description
[<command/> <parameter>]</parameter>	The available commands with parameters are listed below. [] means that you can Enter several commands in one line.
-e <1/2>	1: Enable the SNMP function. 2: Disable the SNMP function.

-a <1/2>	1: Enable the SNMPV1 function.
	2: Disable the SNMPV1 function.
-b <1/2>	1: Enable the SNMPV2C function.
	2: Disable the SNMPV2C function.
-c <1/2>	1: Enable the SNMPV3 function.
	2: Disable the SNMPV3 function.
-g <community name=""></community>	It means to set the name for getting community by typing a proper character. (max. 23 characters)
-s <community name=""></community>	It means to set community by typing a proper name. (max. 23 characters)
-m <ip address=""></ip>	It means to set one host as the manager to execute SNMP function. Please type in IPv4 address to specify certain host.
	It allows to set 3 IPs, separated by ",".
-t <community name=""></community>	It means to set trap community by typing a proper name. (max. 23 characters)
-n <ip address=""></ip>	It means to set the notification host.
	It allows to set 2 IPs, separated by ",".
-T <seconds></seconds>	It means to set the trap timeout <0~999>.
-o <username></username>	It means to set a user account (maximum 23 characters) for user management.
-p <0/1/2>	It means to set the authentication algorithm.
	0: No auth
	1: MD5_AUTH
	2: SHA_AUTH
-q <password></password>	It means to set the password (maximum 23 characters) for authentication.
-r <0,3/4/6>	It means to set privacy algorithm
	0, 3: No_PRIV
	4: DES_PRIV
	6: AES_PRIV
-u <password></password>	It means to set the password (maximum 23 characters) for privacy.
- <i>V</i>	It means to list SNMP setting.

```
> mngt snmp -e 1 -g draytek -s DK -m
192.168.1.20,192.168.5.192/26,10.20.3.40/24 -t trapcom -n
192.168.1.20,10.20.3.40 -T 88
    SNMP Agent Turn on!!!
Get Community set to draytek
Set Community set to DK
Manager Host IP set to 192.168.1.20,192.168.5.192/26,10.20.3.40/24
Trap Community set to trapcom
Notification Host IP set to 192.168.1.20,10.20.3.40
Trap Timeout set to 88 seconds
>
```

Telnet Command: mngt bfp

This command allows you to configure brute force protect (BFP) for system management.

Syntax

Syntax Description

Parameter	Description
[<command/> <parameter>]</parameter>	The available commands with parameters are listed below. [] means that you can Enter several commands in one line.
-e 0/1	Enable / disable the BFP function.
	0 - Disable
	1 - Enable
-s <service></service>	It means to enable different service.
	service - Available types are FTP, HTTP, HTTPS, TELNET, TR069, SSH, and All.
-l <failure></failure>	It means to set login failure retry times.
	failure - Available number is from 1 to 255.
-p <penalty></penalty>	It means to set penalty time for BFP. The unit is sec.
-V	It means to view current settings.

Example

```
> mngt bfp -e 1
> mngt bfp -s FTP
> mngt bfp -l 10
> mngt bfp -v
Current Brute Force Protection Setting:
* Enable: yes
* Service:
- FTP: yes
- HTTP:
           no
- HTTPS:
            no
- TELNET: no
- TR069: no
- SSH:
            no
* Maximum login failures: 10
* Penalty period: 0
```

Telnet Command: mngt cert_import

This command allows you to import a certificate to Vigor router.

Syntax

mngt cert_import local_cert <URL><password>
mngt cert_import trusted_ca <URL>

Parameter	Description
local_cert url <url> <password></password></url>	URL - Enter a URL(http://) for downloading the certificate. The file is encrypted with the file format of "xxxx.p12".

	Password - Enter the password for decrypting the .p12 certificate.
trusted_ca <url></url>	URL - Enter a URL(http://) for downloading the certificate.
	The file is encrypted with the file format of "xxxx.p12".

Telnet Command: mngt telnettimeout

This command allows you to configure the timeout for telnet connection.

Syntax

mngt telnettimeout <value>

Syntax Description

Parameter	Description
<value></value>	Range from 60 to 300. The default value is 300 (seconds).

Example

```
> mngt telnettimeout 100
% Telnet timeout : 100s
```

Telnet Command: mngt sshtimeout

This command allows you to configure the timeout for SSH connection.

Syntax

mngt sshtimeout <value>

Syntax Description

Parameter	Description
<value></value>	Range from 60 to 300. The default value is 180 (seconds).

Example

```
> mngt sshtimeout 200
% SSH timeout : 200s
```

Telnet Command: msubnet switch

This command is used to configure multi-subnet.

Syntax

msubnet switch <2/3/4> <0n/Off>

Syntax Description

Parameter	Description
<2/3/4>	It means LAN interface.
	2=LAN2
	3=LAN3
	4=LAN4
<on off=""></on>	On means turning on the subnet for the specified LAN interface.
	Off means turning off the subnet.

```
> msubnet switch 2 On
% LAN2 Subnet On!

This setting will take effect after rebooting.

Please use "sys reboot" command to reboot the router.
```

Telnet Command: msubnet addr

This command is used to configure IP address for the specified LAN interface.

Syntax

msubnet addr <2/3/4> <IP address>

Syntax Description

Parameter	Description
<2/3/4>	It means LAN interface.
	2=LAN2
	3=LAN3
	4=LAN4
<ip address=""></ip>	Enter the private IP address for the specified LAN interface.

Example

```
> msubnet addr 2 192.168.5.1
% Set LAN2 subnet IP address done !!!

This setting will take effect after rebooting.
Please use "sys reboot" command to reboot the router.
```

Telnet Command: msubnet nmask

This command is used to configure net mask address for the specified LAN interface.

Syntax

msubnet nmask <2/3/4> <IP address>

Syntax Description

Parameter	Description
<2/3/4>	It means LAN interface.
	2=LAN2
	3=LAN3
	4=LAN4
<ip address=""></ip>	Enter the subnet mask address for the specified LAN interface.

```
> msubnet nmask 2 255.255.0.0
% Set LAN2 subnet mask done !!!

This setting will take effect after rebooting.
Please use "sys reboot" command to reboot the router.
```

Telnet Command: msubnet status

This command is used to display current status of subnet.

Syntax

msubnet status <2/3/4>

Syntax Description

Description
It means LAN interface.
2=LAN2
3=LAN3
4=LAN4

Example

```
> msubnet status 2
% LAN2 Off: 0.0.0.0/0.0.0.0, PPP Start IP: 0.0.0.60
% DHCP server: Off
% Dhcp Gateway: 0.0.0.0, Start IP: 0.0.0.10, Pool Count: 50
```

Telnet Command: msubnet dhcps

This command allows you to enable or disable DHCP server for the subnet.

Syntax

msubnet dhcps <2/3/4> <0n/Off>

Syntax Description

Parameter	Description
<2/3/4>	It means LAN interface.
	2=LAN2
	3=LAN3
	4=LAN4
<0n/0ff>	On means enabling the DHCP server for the specified LAN interface.
	Off means disabling the DHCP server.

Example

656

```
> msubnet dhcps 3 off
% LAN3 Subnet DHCP Server disabled!

This setting will take effect after rebooting.

Please use "sys reboot" command to reboot the router.
```

Telnet Command: msubnet nat

This command is used to configure the subnet for NAT or Routing usage.

Syntax

msubnet nat <2/3/4> <0n/Off>

Syntax Description

Parameter	Description
<2/3/4>	It means LAN interface.
	2=LAN2
	3=LAN3
	4=LAN4
<on off=""></on>	On - It means the subnet will be configured for NAT usage.
	Off - It means the subnet will be configured for Routing usage.

Example

```
> msubnet nat 2 off
% LAN2 Subnet is for Routing usage!
%Note: If you have multiple WAN connections, please be reminded to setup a Load-Balance policy so that packets from this subnet will be forwarded to the right WAN interface!

This setting will take effect after rebooting.
Please use "sys reboot" command to reboot the router.
```

Telnet Command: msubnet gateway

This command is used to configure an IP address as the gateway used for subnet.

Syntax

msubnet gateway <2/3/4> <Gateway IP>

Parameter	Description
<2/3/4>	It means LAN interface.
	2=LAN2
	3=LAN3

	4=LAN4
<gateway ip=""></gateway>	Specify an IP address as the gateway IP.

```
> msubnet gateway 2 192.168.1.13
% Set LAN2 Dhcp Gateway IP done !!!

This setting will take effect after rebooting.

Please use "sys reboot" command to reboot the router.
```

Telnet Command: msubnet ipcnt

This command is used to defined the total number allowed for each LAN interface.

Syntax

msubnet ipcnt <2/3/4> <IP counts>

Syntax Description

Parameter	Description
<2/3/4>	It means LAN interface.
	2=LAN2
	3=LAN3
	4=LAN4
<ip counts=""></ip>	Specify a total number of IP address allowed for each LAN interface.
	The available range is from 0 to 220.

Example

```
> msubnet ipcnt 2 15

This setting will take effect after rebooting.

Please use "sys reboot" command to reboot the router.
```

Telnet Command: msubnet talk

This command is used to establish a route between two LAN interfaces.

Syntax

msubnet talk <1/2/3/4> <1/2/3/4> <0n/0ff>

Parameter	Description
<1/2/3/4>	It means LAN interface. 1=LAN1

	2=LAN2
	3=LAN3
	4=LAN4
<on off=""></on>	On - It means
	Off - It means

```
> msubnet talk 1 2 on
% Enable routing between LAN1 and LAN2!
> msubnet talk ?
% msubnet talk <1/2/3/4> <1/2/3/4> <0n/Off>
% where 1:LAN1, 2:LAN2, 3:LAN3, 4:LAN4,
% Now:
% LAN1 LAN2 LAN3 LAN4
% LAN1 V
% LAN2 V V
% LAN3 V
% LAN4 V
```

Telnet Command: msubnet startip

This command is used to configure a starting IP address for DCHP.

Syntax

msubnet startip <2/3/4> <Gateway IP>

Syntax Description

Parameter	Description
<2/3/4>	It means LAN interface.
	2=LAN2
	3=LAN3
	4=LAN4
<gateway ip=""></gateway>	Type an IP address as the starting IP address for a subnet.

```
> msubnet startip 2 192.168.2.90
%Set LAN2 Dhcp Start IP done !!!

This setting will take effect after rebooting.
Please use "sys reboot" command to reboot the router.
> msubnet startip ?
% msubnet startip <2/3/4> <Gateway IP>
% Now: LAN2 192.168.2.90; LAN3 192.168.3.10; LAN4 192.168.4.10
>
```

Telnet Command: msubnet pppip

This command is used to configure a starting IP address for PPP connection.

Syntax

msubnet pppip <2/3/4> <Start IP>

Syntax Description

Parameter	Description
<2/3/4>	It means LAN interface.
	2=LAN2
	3=LAN3
	4=LAN4
<start ip=""></start>	Type an IP address as the starting IP address for PPP connection.

Example

```
> msubnet pppip 2 192.168.2.250
% Set LAN2 PPP(IPCP) Start IP done !!!

This setting will take effect after rebooting.
Please use "sys reboot" command to reboot the router.

> msubnet pppip ?
% msubnet pppip <2/3/4> <Start IP>
% Now: LAN2 192.168.2.250; LAN3 192.168.3.200; LAN4 192.168.4.200
>
```

Telnet Command: msubnet nodetype

This command is used to specify the type for node which is required by DHCP option.

Syntax

msubnet nodetype <2/3/4> <count>

Syntax Description

Parameter	Description
<2/3/4>	It means LAN interface.
	2=LAN2
	3=LAN3
	4=LAN4
<count></count>	Choose the following number for specifying different node type.
	1= B-node
	2= P-node
	4= M-node
	8= H-node
	0= Not specify any type for node.

```
> msubnet nodetype 2 2
% Set LAN2 Dhcp Node Type done !!!
> msubnet nodetype ?
% msubnet nodetype <2/3/4> <count>
% Now: LAN2 2; LAN3 0; LAN4 0
% count: 1. B-node 2. P-node 4. M-node 8. H-node
```

Telnet Command: msubnet primWINS

This command is used to configure primary WINS server.

Syntax

msubnet primWINS <2/3/4> <WINS IP>

Syntax Description

Parameter	Description
<2/3/4>	It means LAN interface. 2=LAN2 3=LAN3 4=LAN4
<wins ip=""></wins>	Enter the IP address as the WINS IP.

Example

```
> msubnet primWINS 2 192.16.3.5
% Set LAN2 Dhcp Primary WINS IP done !!!
> msubnet primWINS
% msubnet primWINS <2/3/4> <WINS IP>
% Now: LAN2 192.16.3.5; LAN3 0.0.0.0; LAN4 0.0.0.0
```

Telnet Command: msubnet secWINS

This command is used to configure secondary WINS server.

Syntax

msubnet secWINS <2/3/4> <WINS IP>

Syntax Description

Parameter	Description
<2/3/4>	It means LAN interface.
	2=LAN2
	3=LAN3
	4=LAN4
<wins ip=""></wins>	Enter the IP address as the WINS IP.

```
> msubnet secWINS 2 192.168.3.89

% Set LAN2 Dhcp Secondary WINS IP done !!!
> msubnet secWINS ?

% msubnet secWINS <2/3/4> <WINS IP>

% Now: LAN2 192.168.3.89; LAN3 0.0.0.0; LAN4 0.0.0.0
```

Telnet Command: msubnet tftp

This command is used to set TFTP server for multi-subnet.

Syntax

msubnet tftp <2/3/4> <TFTP server name>

Syntax Description

Parameter	Description
<2/3/4>	It means LAN interface.
	2=LAN2
	3=LAN3
	4=LAN4
<tftp name="" server=""></tftp>	Type a name to indicate the TFTP server.

Example

Telnet Command: msubnet mtu

This command allows you to configure MTU value for LAN/ IP Routed Subnet.

Syntax

msubnet mtu <interface> <value>

Syntax Description

Parameter	Description
<interface></interface>	Available settings include LAN1~LAN4, and IP_Routed_Subnet.
<value></value>	1000 ~ 1500 (Bytes), default: 1500 (Bytes)

```
> msubnet mtu LAN1 1492
Set LAN1 subnet mtu as 1492
> msubnet mtu
Usage:
 >msubnet mtu <interface> <value>
 <interface>: LAN1~LAN4,IP_Routed_Subnet, <value>: 1000 ~ 1500 (Bytes),
fault: 1500 (Bytes)
 e.x: >msubnet mtu LAN1 1492
Current Settings:
                   1492 (Bytes)
 LAN1 MTU:
 LAN2 MTU:
                   1500 (Bytes)
 LAN3 MTU:
                   1500 (Bytes)
  LAN4 MTU:
                    1500 (Bytes)
  IP Routed Subnet MTU: 1500 (Bytes)
```

Telnet Command: msubnet leasetime

This command is used to set leasetime for multi-subnet.

Syntax

msubnet leasetime <1/2/3/4> <Lease Time sec.>

Syntax Description

Parameter	Description
<1/2/3/4>	It means LAN interface.
	1=LAN1
	2=LAN2
	3=LAN3
	4=LAN4
<lease sec.="" time=""></lease>	Enter a value (range: 10 to 259200).

Example

```
> msubnet leasetime 1 18603
% Set LAN1 lease time: 18603

> msubnet leasetime ?
% msubnet leasetime <1/2/3/4> <Lease Time (sec.)>
% Now:LAN1 18603; LAN2 259200; LAN3 259200; LAN4 259200
>
```

Telnet Command: object ip obj

This command is used to create an IP object profile.

Syntax

```
object ip obj setdefault
object ip obj <INDEX> -v
object ip obj <INDEX> -n <NAME>
object ip obj <INDEX> -i <INTERFACE>
object ip obj <INDEX> -s <INVERT>
object ip obj <INDEX> -a <TYPE> <START_IP> <END/MASK_IP>
```

Syntax Description

Parameter	Description
setdefault	It means to return to default settings for all profiles.
<index></index>	It means the index number of the specified object profile.
-V	It means to view the information of the specified object profile.
	Example: object ip obj 1 -v
-n <name></name>	It means to define a name for the IP object.
	NAME: Type a name with less than 15 characters.
	Example: object ip obj 9 -n bruce
-i <interface></interface>	It means to define an interface for the IP object.
	INTERFACE=0, means any
	INTERFACE=1, means LAN
	INTERFACE=3, means WAN
	Example: object ip obj 8 -i 0
-s <invert></invert>	It means to set invert seletion for the object profile.
	INVERT=0, means disableing the function.
	INVERT=1, means enabling the function.
	Example: object ip obj 3 -s 1
-a <type></type>	It means to set the address type and IP for the IP object profile.
	TYPE=0, means Mask
	TYPE=1, means Single
	TYPE=2, means Any
	TYPE=3, means Range
	TYPE=4, means MAC
	Example: object ip obj 3 -a 2
<start_ip></start_ip>	When the TYPE is set with 2, you have to type an IP address as a starting point and another IP address as end point.
	Type an IP address.
<end mask_ip=""></end>	Type an IP address (different with START_IP) as the end IP address.

```
> object ip obj 1 -n marketing
OK
> object ip obj 1 -a 1 192.168.1.45
OK
> object ip obj 1 -v
IP Object Profile 1
Name :[marketing]
Interface:[Any]
```

```
Address type:[single]
Start ip address:[192.168.1.45]
End/Mask ip address:[0.0.0.0]
MAC Address:[00:00:00:00:00]
Invert Selection:[0]
```

Telnet Command: object ip grp

This command is used to integrate several IP objects under an IP group profile.

Syntax

```
object ip grp setdefault
object ip grp </NDEX> -v
object ip grp </NDEX> -n <NAME>
object ip grp </NDEX> -i </NTERFACE>
object ip grp </NDEX> -a </P_OBJ_INDEX>
```

Syntax Description

Parameter	Description
setdefault	It means to return to default settings for all profiles.
<index></index>	It means the index number of the specified group profile.
-V	It means to view the information of the specified group profile.
	Example: object ip grp 1 -v
-n <name></name>	It means to define a name for the IP group.
	NAME: Type a name with less than 15 characters.
	Example: object ip grp 8 -n bruce
-i <interface></interface>	It means to define an interface for the IP group.
	INTERFACE=0, means any
	INTERFACE=1, means LAN
	INTERFACE=2, means WAN
	Example: object ip grp 3 -i 0
-a <ip_obj_index></ip_obj_index>	It means to specify IP object profiles for the group profile.
	Example: :object ip grp 3 -a 1 2 3 4 5
	The IP object profiles with index number 1,2,3,4 and 5 will be group under such profile.

```
> object ip grp 2 -n First
IP Group Profile 2
Name :[First]
Interface:[Any]
Included ip object index:
[0:][0]
[1:][0]
[2:][0]
[3:][0]
[4:][0]
[5:][0]
```

```
[7:][0]
 [8:][0]
[9:][0]
 [10:][0]
[11:][0]
Set ok!
> object ip grp 2 -i 1
IP Group Profile 2
Name :[First]
Interface:[Lan]
Included ip object index:
 [0:][1]
[1:][2]
[2:][0]
 [3:][0]
 [4:][0]
 [5:][0]
 [6:][0]
 [7:][0]
 [8:][0]
 [9:][0]
[10:][0]
 [11:][0]
Set ok!
```

Telnet Command: object ipv6 obj

This comman is used to create an IP object profile.

Syntax

```
object ip obj setdefault
object ip obj <INDEX> -V
object ip obj <INDEX> -n <NAME>
object ip obj <INDEX> -i <INTERFACE>
object ip obj <INDEX> -s <INVERT>
object ip obj <INDEX> -a <TYPE> <START_IP> <END/MASK_IP>
```

Parameter	Description
setdefault	It means to return to default settings for all profiles.
<index></index>	It means the index number of the specified object profile.
-V	It means to view the information of the specified object profile. Example: object ip obj 1 $-v$
-n <name></name>	It means to define a name for the IP object. NAME: Type a name with less than 15 characters. Example: object ip obj 9 -n bruce
-i <interface></interface>	It means to define an interface for the IP object.

	INTERFACE=0, means any
	INTERFACE=1, means LAN
	INTERFACE=3, means WAN
	Example: object ip obj 8 -i 0
-s <invert></invert>	It means to set invert seletion for the object profile.
	INVERT=0, means disableing the function.
	INVERT=1, means enabling the function.
	Example: object ip obj 3 -s 1
-a <type></type>	It means to set the address type and IP for the IP object profile.
	TYPE=0, means Mask
	TYPE=1, means Single
	TYPE=2, means Any
	TYPE=3, means Rang
	Example: object ip obj 3 -a 2
<start_ip></start_ip>	When the TYPE is set with 2, you have to type an IP address as a
	starting point and another IP address as end point.
	Type an IP address.
<end mask_ip=""></end>	Type an IP address (different with START_IP) as the end IP address.

```
> object ipv6 obj 3 -n marketing
Setting saved.
> object ipv6 obj 3 -a 0 2607:f0d0:1002:51::4 128
Setting saved.
> object ipv6 obj 3 -v
    IPv6 Object Profile 3
Name :[marketing]
Address Type:[mask]
Start IPv6 Address:[2607:F0D0:1002:51::4]
End IPv6 Address:[::]
Prefix Length:[128]
MAC Address:[00:00:00:00:00:00]
Invert Selection:[0]
Match Type:[0]
```

Telnet Command: object ipv6 grp

This command is used to integrate several IP objects under an IP group profile.

Syntax

```
object ip grp setdefault
object ip grp </NDEX> -V
object ip grp </NDEX> -n <NAME>
object ip grp </NDEX> -i <INTERFACE>
object ip grp </NDEX> -a <IP_OBJ_INDEX>
```

Parameter	Description
setdefault	It means to return to default settings for all profiles.
<index></index>	It means the index number of the specified group profile.
-V	It means to view the information of the specified group profile.
	Example: object ip grp 1 -v
-n <name></name>	It means to define a name for the IP group.
	NAME: Type a name with less than 15 characters.
	Example: object ip grp 8 -n bruce
-i <interface></interface>	It means to define an interface for the IP group.
	INTERFACE=0, means any
	INTERFACE=1, means LAN
	INTERFACE=2, means WAN
	Example: object ip grp 3 -i 0
-a <ip_obj_index></ip_obj_index>	It means to specify IP object profiles for the group profile.
	Example: :object ip grp 3 -a 1 2 3 4 5
	The IP object profiles with index number 1,2,3,4 and 5 will be group under such profile.

```
> object ipv6 grp 3 -a 1 2 3 4 5
IP Group Profile 3
Name
      :[]
Included ip object index:
[0:][1]
[1:][2]
[2:][3]
[3:][4]
[4:][5]
[5:][0]
[6:][0]
[7:][0]
> object ipv6 grp 3 -n marketing
IPv6 Group Profile 3
      :[marketing]
Included ip object index:
[0:][1]
 [1:][2]
 [2:][3]
 [3:][4]
 [4:][5]
 [5:][0]
 [6:][0]
 [7:][0]
```

Telnet Command: object country obj

This command is used to create country object profile.

Syntax

object country set </NDEX> -v

```
object country set <INDEX> -n <NAME>
object country set <INDEX>-a <COUNTRY_INDEX>
object country activate
object country setdefault
object country list
```

Syntax Description

Parameter	Description
<index></index>	It means the index number of the specified country object profile (1 to 32).
<name></name>	It means to set a name of the object.
<country_index></country_index>	It means the code number of a country. To get the detailed information of the code number, use "object country list" to get the one you need.oj
activate	It means to activate the country object profile.
setdefault	It means to return to default settings for all profiles.
list	Displays a list of country with code number. For example, "222" means "Taiwan"; "241" means "United States".

Example

```
> object country set 1 -n Best
Country object Profile 1
Name :[Best]
Included country index:

Set ok!
> object country set 1 -a 222
> object country set 1 -a 222
Country object Profile 1
Name :[Best]
Included country index:
[0:][222] Taiwan
Set ok!
```

Telnet Command: object service obj

This command is used to create service object profile.

Syntax

```
object service obj setdefault
object service obj <INDEX>-v
object service obj <INDEX>-n <NAME>
object service obj <INDEX> -p <PROTOCOL>
object service obj <INDEX> -s <CHK> <START_P> <END_P>
object service obj <INDEX> -d <CHK> <START_P> <END_P>
```

Parameter	Description
setdefault	It means to return to default settings for all profiles.
<index></index>	It means the index number of the specified service object profile.
-V	It means to view the information of the specified service object profile.
	Example: object service obj 1 -v
-n <name></name>	It means to define a name for the IP object.
	NAME: Type a name with less than 15 characters.
	Example: object service obj 9 -n bruce
-i <protocol></protocol>	It means to define a PROTOCOL for the service object profile.
	PROTOCOL =0, means any
	PROTOCOL =1, means ICMP
	PROTOCOL =2, means IGMP
	PROTOCOL =6, means TCP
	PROTOCOL =17, means UDP
	PROTOCOL =255, means TCP/UDP
	Other values mean other protocols.
	Example: object service obj 8 -i 0
<chk></chk>	It means the check action for the port setting.
	0=equal(=), when the starting port and ending port values are the same, it indicates one port; when the starting port and ending port values are different, it indicates a range for the port and available for this service type.
	1=not equal(!=), when the starting port and ending port values are the same, it indicates all the ports except the port defined here; when the starting port and ending port values are different, it indicates that all the ports except the range defined here are available for this service type.
	2=larger(>), the port number greater than this value is available
	3=less(<), the port number less than this value is available for this profile.
-s <chk> <start_p> <end_p></end_p></start_p></chk>	It means to set source port check and configure port range (1-65565) for TCP/UDP.
	START_P: Enter a port number as a starting port.
	END_P, type a port number as an ending port.
	Example: object service obj 3 -s 0 100 200
-d <chk> <start_p> <end_p></end_p></start_p></chk>	It means to set destination port check and configure port range (1-65565) for TCP/UDP.
	START_P: Enter a port number as a starting port.
	END_P: Enter a port number as an ending point.
	Example: object service obj 3 -d 1 100 200

```
> object service obj 1 -n limit
> object service obj 1 -p 255
> object service obj 1 -s 1 120 240
> object service obj 1 -d 1 200 220
> object service obj 1 -v
Service Object Profile 1
Name :[limit]
Protocol:[255]
Source port check action:[!=]
```

```
Source port range:[120~240]

Destination port check action:[!=]

Destination port range:[200~220]
```

Telnet Command: object service grp

This command is used to integrate several service objects under a service group profile.

Syntax

```
object service grp setdefault
object service grp <INDEX> -v
object service grp <INDEX> -n <NAME>
object service grp <INDEX> -a <SER_OBJ_INDEX>
```

Syntax Description

Parameter	Description		
setdefault	It means to return to default settings for all profiles.		
<index></index>	It means the index number of the specified group profile.		
-V	It means to view the information of the specified group profile.		
	Example: object service grp 1 -v		
-n <name></name>	It means to define a name for the service group.		
	NAME: Type a name with less than 15 characters.		
	Example: object service grp 8 -n bruce		
-a <ser_obj_index></ser_obj_index>	It means to specify service object profiles for the group profile.		
	Example: :object service grp 3 -a 1 2 3 4 5		
	The service object profiles with index number 1,2,3,4 and 5 will be group under such profile.		

```
> object service grp 1 -n Grope_1
Service Group Profile 1
Name : [Grope_1]
Included service object index:
[0:][0]
[1:][0]
[2:][0]
[3:][0]
[4:][0]
[5:][0]
[6:][0]
[7:][0]
> object service grp 1 -a 1 2
Service Group Profile 1
Name : [Grope_1]
Included service object index:
[0:][1]
[1:][2]
[2:][0]
```

```
[3:][0]
[4:][0]
[5:][0]
[6:][0]
```

Telnet Command: object kw

This command is used to create keyword profile.

Syntax

```
object kw obj setdefault
object kw obj show PAGE
object kw obj </NDEX> -v
object kw obj </NDEX> -n <NAME>
object kw obj </NDEX> -a <CONTENTS>
```

Syntax Description

Parameter	Description
setdefault	It means to return to default settings for all profiles.
show PAGE	It means to show the contents of the specified profile. PAGE: Enter the page number.
show	It means to show the contents for all of the profiles.
<index></index>	It means the index number of the specified keyword profile.
-V	It means to view the information of the specified keyword profile.
-n <name></name>	It means to define a name for the keyword profile. NAME: Type a name with less than 15 characters.
-a <contents></contents>	It means to set the contents for the keyword profile. Example: object kw obj 40 -a test

```
> object kw obj 1 -n children
Profile 1
Name :[children]
Type :[Normal]
Content:[]
> object kw obj 1 -a gambling
Profile 1
Name :[children]
Type :[Normal]
Content:[gambling]
> object kw obj 1 -v
Profile 1
Name :[children]
Content:[gambling]
```

Telnet Command: object fe

This command is used to create File Extension Object profile.

Syntax

```
object fe show
object fe setdefault
object fe obj <INDEX> -v
object fe obj <INDEX> -n <NAME>
object fe obj <INDEX> -e <CATEGORY><FILE_EXTENSION>
object fe obj <INDEX> -d <CATEGORY><FILE_EXTENSION>
```

Syntax Description

Parameter	Description	
show	It means to show the contents for all of the profiles.	
setdefault	It means to return to default settings for all profiles.	
<index></index>	It means the index number (from 1 to 8) of the specified file extension object profile.	
-V	It means to view the information of the specified file extension object profile.	
-n <name></name>	It means to define a name for the file extension object profile. NAME: Type a name with less than 15 characters.	
-e	It means to enable the specific CATEGORY or FILE_EXTENSION.	
-d	It means to disable the specific CATEGORY or FILE_EXTENSION	
<category><file_extensio n=""></file_extensio></category>	CATEGORY: Image, Video, Audio, Java, ActiveX, Compression, Executation, P2P, Document Example: object fe obj 1 -e Image FILE_EXTENSION: ".bmp", ".dib", ".gif", ".jpeg", ".jpg", ".jpg2", ".jp2", ".pct", ".pcx", ".pic", ".pict", ".png", ".tif", ".tiff", ".ico", ".asf", ".avi", ".mov", ".mpee", ".mpeg", ".mp4", ".qt", ".rm", ".wmv", ".3gp", ".3gpp", ".3gpp2", ".3g2", ".flv", ".swf", ".aac", ".aiff", ".au", ".mp3", ".m4a", ".m4p", ".ogg", ".ra", ".ram", ".vox", ".wav", ".wma", ".class", ".jad", ".jar", ".jav", ".java", ".jcm", ".js", ".jse", ".jsp", ".jtk", ".alx", ".apb", ".axs", ".ocx", ".olb", ".ole", ".tlb", ".viv", ".vrm", ".ace", ".arj", ".bzip2", ".bz2", ".cab", ".gz", ".gzip", ".rar", ".sit", ".zip", ".bas", ".bat", ".com", ".exe", ".inf", ".pif", ".reg", ".scr", ".torrent", ".doc", ".docx", ".odp", ".ods", ".odt", ".pdf", ".ppt", ".pptx", ".xls", ".xlsx" Example: object fe obj 1 -e .bmp	

```
> object fe obj 1 -n music
> object fe obj 1 -e Audio
> object fe obj 1 -v
Profile Index: 1
```

Profile Name:[mus	sic]

Parameter	Description

show	It means to show the contents for all of the profiles.		
setdefault	It means to return to default settings for all profiles.		
<index></index>	It means the index number (from 1 to 10) of the specified SMS object profile.		
-V	It means to view the information of the specified SMS object profile.		
-n <name></name>	It means to define a name for the SMS object profile. NAME: Type a name with less than 15 characters.		
-s <service provider=""></service>	It means to specify the number of the service provider which offers the service of SMS. Different numbers represent different service provider. 0 : kotsms.com.tw (TW) 2 : textmarketer.co.uk (UK) 4 : messagemedia.co.uk (UK) 5 : bulksms.com (INT) 6 : bulksms.co.uk (UK) 7 : bulksms.2way.co.za (ZA) 8 : bulksms.2way.co.za (ZA) 8 : bulksms.com.es (ES) 9 : usa.bulksms.com (US) 10 : bulksms.de (DE) 11 : www.pswin.com (EU) 12 : www.messagebird.com (EU) 13 : www.lusosms.com (EU) 14 : www.vibeactivemedia.com (UK)		
-u <username></username>	It means to define a user name for the SMS object profile. Type a user name that the sender can use to register to selected SMS provider.		
-p <password></password>	It means to define a password for the SMS object profile. Type a password that the sender can use to register to selected SMS provider.		
-q <quota></quota>	Enter the number of the credit that you purchase from the service provider. Note that one credit equals to one SMS text message on the standard route.		
-l <interval></interval>	It means to set the sending interval for the SMS to be delivered. Enter the shortest time interval for the system to send SMS.		
-l <url></url>	It means to set the URL for Custom 1 and Custom 2 profiles. The profile name for Custom 1 and Custom 2 are defined in default and can not be changed.		

```
> object sms obj 1 -n TW
> object sms obj 1 -s 0
> object sms obj 1 -u carrie
> object sms obj 1 -p 19971125cm
> object sms obj 1 -q 2
> object sms obj 1 -i 50
> object sms obj 1 -v
Profile Index: 1
Profile Name:[TW]
SMS Provider:[kotsms.com.tw (TW)]
Username:[carrie]
Password:[*****]
Quota:[2]
Sending Interval:[50(seconds)]
```

Telnet Command: object mail

This command is used to create mail object profile.

Syntax

```
object mail show object mail setdefault object mail obj <INDEX> -v object mail obj <INDEX> -n <Profile Name> object mail obj <INDEX> -s <SMTP Server> object mail obj <INDEX> -l <Use SSL> object mail obj <INDEX> -m <SMTP Port> object mail obj <INDEX> -a <Sender Address> object mail obj <INDEX> -t <Authentication> object mail obj <INDEX> -u <Username> object mail obj <INDEX> -p <Password> object mail obj <INDEX> -i <Sending Interval>
```

Syntax Description

Parameter	Description
show	It means to show the contents for all of the profiles.
setdefault	It means to return to default settings for all profiles.
<index></index>	It means the index number (from 1 to 10) of the specified mail object profile.
- <i>V</i>	It means to view the information of the specified mail object profile.
-n <profile name=""></profile>	It means to define a name for the mail object profile.
	Profile Name: Type a name with less than 15 characters.
-s <smtp server=""></smtp>	It means to set the IP address of the mail server.
-I <use ssl<<="" td=""><td>It means to use port 465 for SMTP server for some e-mail server uses https as the transmission method. 0 - disable 1 - enable to use the port number.</td></use>	It means to use port 465 for SMTP server for some e-mail server uses https as the transmission method. 0 - disable 1 - enable to use the port number.
-m <smtp port=""></smtp>	It means to set the port number for SMTP server.
-a <sender address=""></sender>	It means to set the e-mail address (e.g., johnwash@abc.com.tw) of the sender.
-t <authentication></authentication>	The mail server must be authenticated with the correct username and password to have the right of sending message out. 0 - disable 1 - enable to use the port number.
-u <username></username>	Type a name for authentication. The maximum length of the name you can set is 31 characters.
-p <password></password>	Type a password for authentication. The maximum length of the password you can set is 31 characters.
-i <sending interval=""></sending>	Define the interval for the system to send the SMS out. The unit is second.

```
> object mail obj 1 -n buyer
> object mail obj 1 -s 192.168.1.98
> object mail obj 1 -m 25
> object mail obj 1 -t 1
> object mail obj 1 -u john
> object mail obj 1 -p happy123456
> object mail obj 1 -i 25
> object mail obj 1 -v
Profile Index: 1
```

```
Profile Name:[buyer]

Sending Interval:[0(seconds)]
```

Telnet Command: object noti

This command is used to create notification object profile.

Syntax

object noti show object noti setdefault object noti obj *INDEX -v* object noti obj *INDEX -n Profile Name* object mail obj *INDEX -e Category Status* object mail obj *INDEX -d Category Status*

Syntax Description

Parameter	Description	
show	It means to show the contents for all of the profiles.	
setdefault	It means to return to default settings for all profiles.	
<index></index>	It means the index number (from 1 to 8) of the specified notification object profile.	
-V	It means to view the information of the specified notification object profile.	
-n <profile name=""></profile>	It means to define a name for the notification object profile. Profile Name: Type a name with less than 15 characters.	
-е	It means to enable the status of specified category.	
-d	It means to disable the status of specified category.	
Category	Available categories are: 1: WAN; 2: VPN Tunnel; 3: Temperature Alert; 4: WAN Budget; 5: CVM; 6: High Availability	
status	For WAN - 1: Disconnected; 2: Reconnected. For VPN Tunnel - 1: Disconnected; 2: Reconnected. For Temperature Alert - 1: Out of Range. For WAN Budget - 1: Limit Reached. For CVM - 1: CPE Offline; 2: Backup Fail; 3: Restore Fail; 4: FW Update Fail; 5: VPN Profile Setup Fail. For High Availability - 1: Failover Occurred, Config Sync Fail, and Router Unstable	

```
> object noti obj 1 -n market
> object noti obj 1 -e 2 1
> object noti obj 1 -v
Profile Index: 1
Profile Name:[market]
```

Category	Status
WAN	[v]Disconnected [v]Reconnected
VPN Tunnel	[v]Disconnected []Reconnected

WAN Budget Alert	[]Limit Reached
Security	[]Web Log-in event occurs
	[]Telnet Log-in event occurs
	[]SSH Log-in event occurs
	[]TR069 Log-in event occurs
	[]FTP User Log-in event occurs
	[]Config-Changed event occurs

Telnet Command: object schedule

This command is used to create schedule object profile.

Syntax

object schedule set INDEX option object schedule view object schedule setdefault

Parameter	Description		
set	It means to set the schedule profile.		
INDEX	It means the index number (from 1 to 15) of the specified object profile.		
option	Available options for schedule.		
-e <value></value>	It means to enable the schedule setup. 0 - disable 1 - enable		
-c <comment></comment>	It means to set brief description for the specified profile. The length range of the comment: 0 ~ 32 characters.		
-D <year><month><day></day></month></year>	It means to set the starting date of the profile. [year] - Must be between 2000-2049. [month] - Must be between 1-12. [day] - Must be between 1-31. For example: To set Start Date 2015/10/6, type > object schedule set 1 -D "2015 10 6"		
-T <hour><minute></minute></hour>	It means to set the starting time of the profile. [hour] - Must be between 0-23. [minute] - Must be between 0-59. For example: To set Start Time 10:20, type > object schedule set 1 - T "10 20"		
-d <hour><minute></minute></hour>	It means to set the duration time of the profile. [hour] - Must be between 0-23. [minute] - Must be between 0-59. For example: To set Duration Time 3:30, type > object schedule set 1 -d "3 30"		
-a <value></value>	It means to set the action used for the profile. [value] - 0:Force On, 1:Force Down, 2:Enable Dial-On-Demand, 3:Disable Dial-On-Demand		
-l <value></value>	It means to set idle time. [value] - Must be between 0-255(minute). The default is 0.		
-h <option> <day cycle_days="" date=""></day></option>	Set how often the schedule will be applied. [option] - Enter 0 to 3.		

	0: Once,
	1: Weekdays
	2: Monthly
	3: Cycle days
	[day] - Enter Sun, Mon, Tue, Wed, Thu, Fri, Sat.
	If the [option] set as 1(Weekdays), then select which days of a Week.
	[date]: 1-28
	If the [option] set as 2(Monthly), then select which date of a Month. [cycle_days]: 1-30
	If the [option] set as 3 (cycle days), then select which days to do the cycle schedule.
	example: To select Sunday, Monday, Thursday, type
	> object schedule set 1 -h "1 Sun Mon Thu"
view <index></index>	It means to show the content of the profile.
setdefault	It means to return to default settings for all profiles.

```
> object schedule set 1 -e 1
> object schedule set 1 -c Working
> object schedule set 1 -D "2020 11 8"
> object schedule set 1 -T "8 1"
> object schedule set 1 -d "2 30"
> object schedule set 1 -a 0
> object schedule set 1 -h "1 Mon Wed"
> object schedule view 1
Index No.1
[v] Enable Schedule Setup
      Comment [ Working ]
      Start Date (yyyy-mm-dd) [ 2020 ]-[ 11 ]-[ 8 ]

      [v] Weekdays
          [ ]Sun [v]Mon [ ]Tue [v]Wed [ ]Thu [ ]Fri [ ]Sat
```

Telnet Command: port

This command allows users to set the speed for specific port of the router.

Syntax

```
port <1, 2, 3, 4, all> <AN, 1G, 100F, 100H, 10F, 10H, status>
port <wan2> <AN, 1000F, 100F, 100H, 10F, 10H, status>
port <enable, disable> <1, 2, 3, 4, all>
port status
port sniff <on,off,port,txrx,restart,status>
port 8021x <enable,disable,status,addport,delport>
```

port jumbo <on/off>
port jumbo size <value>
port wanfc <INDEX> <on/off/status>

Parameter	Description
<1, 2, 3, 4, all> <an, 1g,<br="">100F, 100H, 10F, 10H, status></an,>	It means to set the LAN port and the physical type for the specific port. <1, 2, 3, 4, all>: Select an interface. <an, 100f,="" 100h,="" 10f,="" 10h,="" 1g,="" status="">: Select the physical type for the specific port. AN: auto-negotiate. 100F: 100M Full Duplex. 10H: 10M Full Duplex. 10H: 10M Half Duplex.</an,>
<wan2> <an, 1000f,="" 100f,<br="">100H, 10F, 10H, status></an,></wan2>	It means to set the WAN port and the physical type for the specific port. <wan2>: Select an interface. <an, 1000f,="" 100h,="" 10f,="" 10h,="" status="">: Select the physical type for the specific port. AN: auto-negotiate. 1000F: 1000M Full Duplex. 100F: 100M Full Duplex. 10H: 100M Half Duplex. 10H: 10M Half Duplex.</an,></wan2>
<enable, disable=""> <1, 2, 3, 4, all></enable,>	It means to enable or disable the LAN port(s). <enable, disable="">: Enter enable or disable. <1,2,3,4, all>: Enter the number to select a LAN port. Or, enter "all" to select all ports.</enable,>
status	It means to view the Ethernet port status.
sniff <on,off,port,txrx,restart,st atus></on,off,port,txrx,restart,st 	It means to set settings for sniffer. <on,off,port,txrx,restart,status>: See the following, on - Turn on the sniffer. off - Turn off the sniffer. port - Specify a LAN port (p1, p2, p3 or p4). restart - Restart the system to activate the settings. status - Display current settings. rxrx - Set the transmission and receiving rates for a LAN/WAN port. e.g., > port sniff txrx 30000 p2</on,off,port,txrx,restart,status>
802.1x <enable,disable,status,addp ort,delport></enable,disable,status,addp 	It means to set settings for 802.1x. <enable,disable,status,addport,delport>: See the following, enable - Enable the function. disable - Disable the function. status - Display current settings. addport - Add a port number (1 to 4). delport - Delete a port number (1 to 4).</enable,disable,status,addport,delport>
Jumbo <on off=""></on>	It means to enable or disable the Jumbo function. <on off="">:If enabled, set a value for the jumbo frame.</on>

jumbo size <value></value>	If jumbo is enabled, set a jumbo size. <value>: 1537 to 9022. Set a number.</value>			
wanfc <index> <on off="" status=""></on></index>	It means to set WAN flow control. <index>: Enter the index number (1 to 2) of the WAN interface. <on off="" status="">: Enter "on" to enable the function; enter "off" to disable the function; enter "status" to view current settings.</on></index>			

```
> port 1 100F

%Set Port 1 Force speed 100 Full duplex OK !!!

> port wanfc 1 status

% WAN1 local node flow control support: ON
```

Telnet Command: portmaptime

This command allows you to set a time of keeping the session connection for specified protocol.

Syntax

portmaptime [-<command> <parameter> | ...]

Syntax Description

Parameter	Description				
[<command/> <parameter>]</parameter>	The available commands with parameters are listed below. [] means that you can Enter several commands in one line.				
-t <sec></sec>	It means "TCP" protocol. <sec>: Type a number to set the TCP session timeout.</sec>				
-u <sec></sec>	It means "UDP" protocol. <sec>: Type a number to set the UDP session timeout.</sec>				
-i <sec></sec>	It means "IGMP" protocol. <sec>: Type a number to set the IGMP session timeout.</sec>				
-W <sec></sec>	It means "TCP WWW" protocol. <sec>: Type a number to set the TCP WWW session timeout.</sec>				
-s <sec></sec>	It means "TCP SYN" protocol. <sec>: Type a number to set the TCP SYN session timeout.</sec>				
-f	It means to flush all portmaps (useful for diagnostics).				
-I <list></list>	List all settings.				

Example

```
> portmaptime -t 86400 -u 300 -i 10
> portmaptime -l
------ Current setting ------
TCP Timeout : 86400 sec.
UDP Timeout : 300 sec.
IGMP Timeout : 10 sec.
TCP WWW Timeout: 60 sec.
TCP SYN Timeout: 60 sec.
>
```

Telnet Command: ppa

This command allows you to configure PPA mode.

```
ppa [-<command> <parameter> | ... ]
ppa n [-<command> <parameter> | ... ]
```

Syntax Description

Parameter	Description					
[<command/> <parameter>]</parameter>	The available commands with parameters are listed below. [] means that you can Enter several commands in one line.					
-z <1/0>	Enable or disable the PPA Hardware Acceleration. <1/0>: Enter 1(enable) or 0 (disable).					
-m <mode></mode>	Specify a mode. 1=auto 2=manual(traffic) 3=manual(qos) 0=disable					
-p <proto></proto>	Specify a protocol. <proto> - 1-TCP; 2-UDP; 3-Both.</proto>					
-b <1/0>	Enable/disable TWO-way hardware acceleration. <1/0>: Enter 1(enable) or 0 (disable).					
-M enable/disable	Enable/disable the multicast hardware acceleration.					
-S	Show multicast table in HW accleration					
-V	Show PPA_WAN_Table and PPA_LAN_Table for reference.					
-C	Clean all settings.					
-х	Show hardware acceleration information.					
-k	Clean the PPA table.					
ppa n - used in QoS or specific h	nost					
-l <rule></rule>	Specify an index number of rule profile for QoS mode.					
-х	Show hardware acceleration information.					
-k	Clean the PPA table.					

```
> ppa -m 1 -p 1 -b 0
Set ok! The PPA mode is Auto
% You need to set the Manual mode first !
> ppa -v
%PPA is enabled
%PPA NAT is enabled
% PPA mode is Auto
%PPA Protocol TCP 1, UDP 0
%PPA Multicast is enabled
%PPA two way enable
%PPA time is 10
%PPA range is 8000
%PAE range is 2048
%MPE range is 5952
%PPA LAN entries 0, working 0 \,
%PPA WAN entries 0, working 0
%PPA statistics interval: 5 sec
```

Telnet Command: prn

This command allows you to view current status (interface and driver) of USB printer.

Syntax

prn status prn debug prn enable <0/1>

Example

```
> prn status
Interface: USB bus 2.0
Printer: NotReady

> prn debug
conn[0]:
none
conn[1]:
none
conn[2]:
none
conn[3]:
none
LPD_data_total=0

UsbPrintReady=0, UsbIsPrinting=0
```

Telnet Command: qos setup

This command allows user to set general settings for QoS.

Syntax

qos setup [-<command> <parameter> | ...]

Parameter	Description					
[<command/>	The available commands with parameters are listed below.					
<pre><parameter>]</parameter></pre>	[] means that you can Enter several commands in one line.					
-h	Type it to display the usage of this command.					
-W <1~3>	It means to select an interface.					
	<1~3>: 1 is WAN1; 2 is WAN2; 3 is WAN3. The default is WAN1.					
-m <mode></mode>	It means to define which traffic the QoS control settings will apply to and eable QoS control.					
	0: disable.					
	1: in, apply to incoming traffic only.					
	2: out, apply to outgoing traffic only.					
	3: both, apply to both incoming and outgoing traffic.					
	Default is enable (for outgoing traffic).					
-i <bandwidth></bandwidth>	It means to set inbound bandwidth in kbps (Ethernet WAN only) The available setting is from 1 to 100000.					
-o <bandwidth></bandwidth>	It means to set outbound bandwidth in kbps (Ethernet WAN only). The available setting is from 1 to 100000.					

-r <index:ratio></index:ratio>	It means to set ratio for class index, in %.
-u <mode></mode>	It means to enable bandwidth control for UDP. 0: disable
	1: enable
	Default is disable.
-p <ratio></ratio>	It means to enable bandwidth limit ratio for UDP.
-t <mode></mode>	It means to enable/disable Outbound TCP ACK Prioritize.
	0: disable
	1: enable
-V	Show all the settings.
-I <bandwidth></bandwidth>	It means the minimum available non-VoIP Inbound Bandwidth when VoIP is detected (Kbps).
	<bandwidth>: Enter a value. Default value: half of WAN inbound bandwidth.</bandwidth>
-O <bandwidth></bandwidth>	It means the minimum available non-VoIP Outbound Bandwidth when VoIP is detected (Kbps).
	<bandwidth>: Enter a value. Default value: half of WAN outbound bandwidth.</bandwidth>
-v <0/1>	It means to adjust to minimum In/Out bandwidth setting (or half QoS bandwidth).
	0: Auto bandwidth adjustment.
	1: When VoIP detected, QoS In/Out bandwidth will be adjusted to minimum values.
-D	Set all to factory default (for all WANs).
[]	It means that you can Enter several commands in one line.

```
> qos setup -m 3 -i 9500 -o 8500 -r 3:20 -u 1 -p 50 -t 1
WAN1 QOS mode is both
inbound bandwidth set to 9500
outbound bandwidth set to 8500
WAN1 class 3 ratio set to 20
WAN1 udp bandwidth control set to enable
WAN1 udp bandwidth limit ratio set to 50
WAN1 Outbound TCP ACK Prioritizel set to enable
QoS WAN1 set complete; restart QoS
>
```

Telnet Command: qos class

This command allows user to set QoS class.

Syntax

qos class $-c < no > -\langle a/e/d < no > \rangle [-\langle command > \langle parameter > / \dots]$

Parameter	Description
[<command/> <parameter>]</parameter>	The available commands with parameters are listed below. [] means that you can Enter several commands in one line.
-h	Type it to display the usage of this command.
-C <no></no>	Specify the inde number for the class.

	Available value for <no> contains 1, 2 and 3. The default setting is class 1.</no>						
-n <name></name>	It means to type a name for the class.						
-а	It means to add rule for specified class.						
-e <no></no>	It means to edit specified rule. <no>: Enter the index number for the rule.</no>						
-d <no></no>	It means to delete specified rule. <no>: Enter the index number for the rule.</no>						
-m <mode></mode>	It means to enable or disable the specified rule. 0: disable, 1: enable						
-l <addr></addr>	Set the local address. Addr1 - It means Single address. Please specify the IP address directly, for example, "-I 172.16.3.9". addr1:addr2 - It means Range address. Please specify the IP addresses, for example, "-I 172.16.3.9: 172.16.3.50."						
	addr1:subnet - It means the subnet address with start IP address. Please Enter the subnet and the IP address, for example, "-I 172.16.3.9:255.255.0.0".0						
	any - It means Any address. Simple type "-/" to specify any address for this command.						
-r <addr></addr>	Set the remote address. addr1 - It means Single address. Please specify the IP address directly, for example, "-1 172.16.3.9".						
	addr1:addr2 - It means Range address. Please specify the IP addresses, for example, "-I 172.16.3.9: 172.16.3.50."						
	addr1:subnet - It means the subnet address with start IP address. Please Enter the subnet and the IP address, for example, "-/ 172.16.3.9:255.255.0.0".0						
	any - It means Any address. Simple type "-I" to specify any address for this command.						
-p <dscp id=""></dscp>	Specify the ID.						
-s <service type=""></service>	Specify the predefined service type by typing the number. The available types are listed as below: 1:ANY 2:DNS 3:FTP 4:GRE 5:H.323 6:HTTP 7:HTTPS 8:IKE 9:IPSEC-AH 10:IPSEC-ESP 11:IRC 12:L2TP 13:NEWS 14:NFS 15:NNTP 16:PING 17:POP3 18:PPTP 19:REAL-AUDIO 20:RTSP 21:SFTP 22:SIP 23:SMTP 24:SNMP 25:SNMP-TRAPS 26:SQL-NET 27:SSH 28:SYSLOG 29:TELNET 30:TFTP						
-u <service type=""></service>	Specify the user defined service type by typing the number (1 to 40).						
-S <d s=""></d>	Show the content for specified DSCP ID/Service type.						
-V <1/2/3>	Show the rule in the specified class.						

```
> qos class -c 2 -n draytek -a -m 1 -l 192.168.1.50:192.168.1.80

Following setting will set in the class2
class 2 name set to draytek
Add a rule in class2
Class2 the 1 rule enabled
```

```
Set local address type to Range, 192.168.1.50:192.168.1.80
```

Telnet Command: qos type

This command allows user to configure protocol type and port number for QoS.

Syntax

qos type [-a <service name> | -e <no> | -d <no>].

Syntax Description

Parameter	Description
-a <name></name>	It means to add rule.
-e <no></no>	It means to edit user defined service type. "no" means the index number. Available numbers are 1-40.
-d <no></no>	It means to delete user defined service type. "no" means the index number. Available numbers are 1-40.
-n <name></name>	It means the name of the service.
-t <type></type>	It means protocol type. 6: tcp(default) 17: udp 0: tcp/udp <1~254>: other
-p <port></port>	It means service port. The typing format must be [start:end] (ex., 510:330).
-1	List user defined types. "no" means the index number. Available numbers are 1-40.

Example

```
> qos type -a draytek -t 6 -p 510:1330

service name set to draytek
service type set to 6:TCP
Port type set to Range
Service Port set to 510 ~ 1330
>
```

Telnet Command: qos voip

This command allows user to enable or disable the QoS for VoIP and RTP.

Syntax

qos voip <on/off>

Syntax Description

Parameter	Description			
on/off	On - Enable the QoS for VoIP.			
	Off - Disable th QoS for VoIP.			

```
> qos voip off
QoS for VoIP: Disable; SIP Port: 5060
>
```

Telnet Command: quit

This command can exit the telnet command screen.

Telnet Command: show lan

This command displays current status of LAN IP address settings.

Example

Telnet Command: show dmz

This command displays current status of DMZ host.

Example

```
% WAN1 DMZ mapping status:
Index Status WAN1 aux IP Private IP

1 Disable 0.0.0.0

% WAN2 DMZ mapping status:
Index Status WAN2 aux IP Private IP

1 Disable 0.0.0.0

% WAN3 DMZ mapping status:
Index Status WAN3 aux IP Private IP

1 Disable 0.0.0.0
```

Telnet Command: show dns

This command displays current status of DNS setting

```
> show dns
%%     Domain name server settings:
%     LAN1     Primary DNS: [Not set]
%     LAN1     Secondary DNS: [Not set]
%     LAN2     Primary DNS: [Not set]
%     LAN2     Secondary DNS: [Not set]
%     LAN3     Primary DNS: [Not set]
%     LAN3     Secondary DNS: [Not set]
```

```
% LAN4 Primary DNS: [Not set]
% LAN4 Secondary DNS: [Not set]
% LAN5 Primary DNS: [Not set]
% LAN5 Secondary DNS: [Not set]
% LAN6 Primary DNS: [Not set]
% LAN6 Secondary DNS: [Not set]
% LAN7 Primary DNS: [Not set]
% LAN7 Primary DNS: [Not set]
% LAN8 Primary DNS: [Not set]
% LAN8 Secondary DNS: [Not set]
```

Telnet Command: show openport

This command displays current status of open port setting.

Example

Telnet Command: show nat

This command displays current status of NAT.

> show nat									
Port	Port Redirection Running Table:								
Index	Protocol	Public Port	Private IP	Private Port					
1	0	0 0	.0.0.0	0					
2	0	0 0	.0.0.0	0					
3	0	0 0	.0.0.0	0

               ['q': Quit, 'Enter': New Lines, 'Space Bar': Next Page]
```

Telnet Command: show portmap

This command displays the table of NAT Active Sessions.

Example

Telnet Command: show pmtime

This command displays the reuse time of NAT session.

Level0: It is the default setting.

Level1: It will be applied when the NAT sessions are smaller than 25% of the default setting.

Level2: It will be applied when the NAT sessions are smaller than the eighth of the default setting.

Example

```
> show pmtime
Level0 TCP=86400001 UDP=300001 ICMP=10001
Level1 TCP=600000 UDP=90000 ICMP=7000
Level2 TCP=60000 UDP=30000 ICMP=5000
```

Telnet Command: show session

This command displays current status of current session.

```
> show session
% Maximum Session Number: 50000
% Maximum Session Usage: 0
% Current Session Usage: 0
% Current Session Used(include waiting for free): 15
% WAN1 Current Session Usage: 0
```

```
% WAN3 Current Session Usage: 0
>
```

Telnet Command: show status

This command displays current status of LAN and WAN connections.

Example

Telnet Command: show voip

This command displays current status of voip.

> show status						
Idx LAN_IP	PeerIP via	Delay	(ms)	Jitt	ter(ms) Loss	s(%) Time
Duration(sec)	Status					
[11] 0.0.0.0	0.0.0.0	0	0	0		
[10] 0.0.0.0	0.0.0.0	0	0	0		
[9] 0.0.0.0	0.0.0.0	0	0	0		
[8] 0.0.0.0	0.0.0.0	0	0	0		
[7] 0.0.0.0	0.0.0.0	0	0	0		
[6] 0.0.0.0	0.0.0.0	0	0	0

[4] 0.0.0.0	0.0.0.0	0	0	0		
[3] 0.0.0.0	0.0.0.0	0	0	0		
[2] 0.0.0.0	0.0.0.0	0	0	0		

[1] 0.0.0.0	0.0.0.0	0	0	0	
[0] 0.0.0.0	0.0.0.0	0	0	0	

Telnet Command: show traffic

This comman can display traffic graph for WAN1 to WAN4, transmitted bytes, receivied bytes and sessions.

Syntax

show traffic [wan1/wan2/wan3/wan4] [tx/rx] [weekly] show traffic [ipaddr] [tx/rx] show traffic session [weekly]

Example

Telnet Command: show clienttraffic

This command displays packet information for specified external device.

Syntax

show clienttraffic <device index> <wan# or lan#> <tx/rx> <weekly>

Parameter	Description
<device index=""></device>	Enter the device index (01 - 30) in double-digit (ex: 01, 02) for external device.
	Use "switch list" to check which VigorSwitch connects to this router. Then, Enter the index number of this VigorSwitch in this field.
<wan# lan#="" or=""></wan#>	wan# - Specify WAN interface (WAN1 to WAN2) for Vigor router. lan#- Specify LAN interface (LANA / LANB) for Vigor router.
<tx rx=""></tx>	Tx - Inidcate transmitted data. Rx - Indicate receivied data.

<weekly></weekly>	Display the transmitted data or receivied data collected weekly.
-------------------	--

```
> show clienttraffic ?
> show clienttraffic 01 lana tx weekly0 ,0 ,0 ,0 ,0 ,0 ,0 ,0 ,0 ,0 ,0 ,0 ,0
, 0
```

Telnet Command: show statistic

This command displays statistics for WAN interface.

Syntax

show statistic

show statistic reset <interface>

Syntax Description

Parameter	Description
reset	It means to reset the transmitted/received bytes to Zero.
<interface></interface>	It means to specify WAN1 ~WAN5 (including multi-PVC) interface for displaying related statistics.

```
> show statistic
WAN1 total TX: 0 Bytes ,RX: 0 Bytes
WAN2 total TX: 0 Bytes ,RX: 0 Bytes
WAN3 total TX: 0 Bytes ,RX: 0 Bytes
WAN4 total TX: 0 Bytes ,RX: 0 Bytes
WAN5 total TX: 0 Bytes ,RX: 0 Bytes
WAN6 total TX: 0 Bytes ,RX: 0 Bytes
>
```

Telnet Command: smb setting

This command is used to configure file sharing settings for SMB server.

Syntax

```
smb setting <enable/disable>
smb setting show status
smb setting set workgroup <Workgroup name>
smb setting set host <host name>
smb setting set access <LAN / LANWAN>
smb setting set version <v1v2/v2>
```

Syntax Description

Parameter	Description
<enable disable=""></enable>	Enable or disable the SMB service.
show status	Displays current status of SMB service.
Set workgroup <workgroup name=""></workgroup>	It means to set a name of workgroup for SMB service.
set host <host name=""></host>	It means to set a name of the host for SMB service.
set access <lan lanwan=""></lan>	It means to set the access into SMB server by LAN or borth LAN and WAN.
set version <v1v2 v2=""></v1v2>	It means to set SMB server version.

Example

```
> smb setting enable
SMB service is enabled.

> smb setting set access LAN
Allow SMB access from LAN only.
> smb setting set version v1v2
SMB version: v1 and v2.
>
```

Telnet Command: srv dhcp dhcp2

This command is used for configuring which method (LAN interface or MAC address) that the DHCP server on IP routed LAN shall use for assigning an IP address to the IP routed LAN clients.

Syntax

```
srv dhcp dhcp2 -I <enable>
srv dhcp dhcp2 -m <enable>
srv dhcp dhcp2 -e <id>
srv dhcp dhcp2 -e <id>
srv dhcp dhcp2 -v
```

Parameter	Description
-----------	-------------

-l <enable></enable>	The DHCP server assigns the IP addresses to the clients via LAN port. <enable> : Enter 0 (disable) or 1 (enable).</enable>
-m <enable></enable>	The DHCP server assigns the IP addresses to the clients via MAC address configuration. <enable>: Enter 0 (disable) or 1 (enable).</enable>
-e <id></id>	Turn on the flag of LAN 1 or LAN 2 if LAN port is enabled. <id>: Enter 1 or 2.</id>
-d <id></id>	Turn off the flag of LAN port 1 or LAN port 2. <id>: Enter 1 or 2.</id>
-V	View current status.

```
> srv dhcp dhcp2 -1 1 -e 1,2
> srv dhcp dhcp2 -v
2nd DHCP server flag status --
   Server works on specified MAC address: ON
   Server works on specified LAN port: ON
   Port 1 flag: ON
   Port 2 flag: ON
>
```

Telnet Command: srv dhcp public

This command allows users to configure DHCP server for second subnet.

Syntax

Syntax Description

Parameter	Description
start <ip address=""></ip>	It means the starting point of the IP address pool for the DHCP server. <ip address="">: Specify an IP address as the starting point in the IP address pool.</ip>
cnt <ip counts=""></ip>	It means the IP count number. IP counts>: Specify the number of IP addresses in the pool. The maximum is 10.
status	It means the execution result of this command.
add <mac addr<br="">XX-XX-XX-XX-XX></mac>	It means creating a list of hosts to be assigned. <mac addr="" address="" host.<="" mac="" of="" td="" the="" xx-xx-xx-xx-xx-xx-specify=""></mac>
del <mac addr<br="">XX-XX-XX-XX-XX/all/ALL></mac>	It means removing the selected MAC address. <mac addr="" address="" addresses.<="" all="" all:="" host.="" it="" mac="" means="" of="" td="" the="" xx-xx-xx-xx-xx-xx-specify=""></mac>

```
> srv dhcp public start 192.168.1.100
```

```
%% You must enable IP routing !!!
> srv dhcp public status
Index MAC Address
```

Telnet Command: srv dhcp dns1

This command allows users to set Primary IP Address for DNS Server in LAN.

Syntax

srv dhcp dns1 <lan1/lan2/lan3/lan4> <DNS IP address>

Syntax Description

Parameter	Description
<lan1 lan2="" lan3="" lan4=""></lan1>	It means to sepcify the LAN interface for setting the DNS server.
<dns address="" ip=""></dns>	It means the IP address that you want to use as DNS1. Note: The IP Routed Subnet DNS must be the same as NAT Subnet DNS).

Example

```
> srv dhcp dnsl lanl 168.95.1.1
% srv dhcp dnsl <DNS IP address>
% Now: 168.95.1.1
```

Telnet Command: srv dhcp dns2

This command allows users to set Secondary IP Address for DNS Server in LAN.

Syntax

srv dhcp dns2 <lan1/lan2/lan3/lan4> <DNS IP address>

Syntax Description

Parameter	Description
<lan1 lan2="" lan3="" lan4=""></lan1>	It means to sepcify the LAN interface for setting the DNS server.
<dns address="" ip=""></dns>	It means the IP address that you want to use as DNS2. Note: The IP Routed Subnet DNS must be the same as NAT Subnet DNS).

```
> srv dhcp dns2 lan2 10.1.1.1
% srv dhcp dns2 lan2 <DNS IP address>
% Now: 10.1.1.1
>
```

Telnet Command: srv dhcp frcdnsmanl

This command can force the router to invoke DNS Server IP address.

Syntax

srv dhcp frcdnsmanl <on/off>

Syntax Description

Parameter	Description
?	It means to display the current status.
on	It means to use manual setting for DNS setting.
Off	It means to use auto settings acquired from ISP.

Example

```
> srv dhcp frcdnsmanl on
% Domain name server now is using manual settings!
> srv dhcp frcdnsmanl off
% Domain name server now is using auto settings!
```

Telnet Command: srv dhcp gateway

This command allows users to specify gateway address for DHCP server.

Syntax

srv dhcp gateway < Gateway IP>

Syntax Description

Parameter	Description
Gateway IP	It means to specify a gateway address used for DHCP server.

```
> srv dhcp gateway 192.168.2.1
This setting will take effect after rebooting.
Please use "sys reboot" command to reboot the router.
>
```

Telnet Command: srv dhcp ipcnt

This command allows users to specify IP counts for DHCP server.

Syntax

srv dhcp ipcnt <IP counts>

Syntax Description

Parameter	Description
<ip counts=""></ip>	It means the number that you have to specify for the DHCP server.

Example

```
> srv dhcp ipcnt ?
% srv dhcp ipcnt <IP counts>
% Now: 150
```

Telnet Command: srv dhcp off

This function allows users to turn off DHCP server. It needs rebooting router, please type "sys reboot" command to reboot router.

Telnet Command: srv dhcp on

This function allows users to turn on DHCP server. It needs rebooting router, please type "sys reboot" command to reboot router.

Telnet Command: srv dhcp relay

This command allows users to set DHCP relay setting.

Syntax

srv dhcp relay servip <server ip>
srv dhcp relay 2nd_servip <server ip>
srv dhcp relay subnet <index>

Syntax Description

Parameter	Description
<server ip=""></server>	It means the IP address that you want to used as DHCP server.
<index></index>	It means subnet 1 or 2. Please type 1 or 2. The router will invoke this function according to the subnet 1 or 2 specified here.

```
> srv dhcp relay servip 192.168.1.46
> srv dhcp relay subnet 2
```

```
> srv dhcp relay servip ?
% srv dhcp relay servip <server ip>
% Now: 192.168.1.46
```

Telnet Command: srv dhcp startip

Syntax

srv dhcp startip <IP address>

Syntax Description

Parameter	Description
<ip address=""></ip>	It means the IP address that you can specify for the DHCP server as the starting point.

Example

```
> srv dhcp startip 192.168.1.53

This setting will take effect after rebooting.

Please use "sys reboot" command to reboot the router.
```

Telnet Command: srv dhcp status

This command can display general information for the DHCP server, such as IP address, MAC address, leased time, host ID and so on.

Syntax

srv dhcp status <LAN1/2/3/4/ip_routed_subnet>

Syntax Description

Parameter	Description
<lan1 2="" 3="" 4="" ip_routed_su<br="">bnet></lan1>	It means to display current status for the selected interface.

Telnet Command: srv dhcp leasetime

This command can set the lease time for the DHCP server.

Syntax

srv dhcp leasetime <Lease Time (sec) >

Syntax Description

Parameter	Description
<lease (sec)="" time=""></lease>	It means the lease time that DHCP server can use. The unit is second.

Example

```
> srv dhcp leasetime 1500
>
```

Telnet Command: srv dhcp nodetype

This command can set the node type for the DHCP server.

Syntax

srv dhcp nodetype <count>

Syntax Description

Parameter	Description
count	It means to specify a type for node.
	1. B-node
	2. P-node
	4. M-node
	8. H-node

```
> srv dhcp nodetype 1
> srv dhcp nodetype ?
%% srv dhcp nodetype <count>
%% 1. B-node 2. P-node 4. M-node 8. H-node
% Now: 1
```

Telnet Command: srv dhcp primWINS

This command can set the primary IP address for the DHCP server.

Syntax

srv dhcp primWINS <WINS IP address>
srv dhcp primWINS clear

Syntax Description

Parameter	Description
<wins address="" ip=""></wins>	It means the IP address of primary WINS server.
clear	It means to remove the IP address settings of primary WINS server.

Example

```
> srv dhcp primWINS 192.168.1.88
> srv dhcp primWINS ?
%% srv dhcp primWINS <WINS IP address>
%% srv dhcp primWINS clear
% Now: 192.168.1.88
```

Telnet Command: srv dhcp secWINS

This command can set the secondary IP address for the DHCP server.

Syntax

srv dhcp secWINS <WINS IP address>
srv dhcp secWINS clear

Syntax Description

Parameter	Description
<wins address="" ip=""></wins>	It means the IP address of secondary WINS server.
clear	It means to remove the IP address settings of second WINS server.

```
> srv dhcp secWINS 192.168.1.180
> srv dhcp secWINS ?
%% srv dhcp secWINS <WINS IP address>
%% srv dhcp secWINS clear
% Now: 192.168.1.180
```

Telnet Command: srv dhcp expRecycleIP

This command can set the time to check if the IP address can be assigned again by DHCP server or not.

Syntax

srv dhcp expRecycleIP <sec time>

Syntax Description

Parameter	Description
sec time	It means to set the time (5-300 seconds) for checking if the IP can be assigned again or not.

Example

```
> srv dhcp expRecycleIP 250
% DHCP expired_RecycleIP = 250
```

Telnet Command: srv dhcp tftp

This command can set the TFTP server as the DHCP server.

Syntax

srv dhcp tftp <TFTP server name>

Syntax Description

Parameter	Description
<tftp name="" server=""></tftp>	It means to Enter the name of TFTP server.

Example

```
> srv dhcp tftp TF123
> srv dhcp tftp ?
%% srv dhcp tftp <TFTP server name>
% Now: TF123
```

Telnet Command: srv dhcp tftpdel

This command can remove the name defined for the TFTP server.

Syntax

srv dhcp tftpdel

```
> srv dhcp tftp TF123
> srv dhcp tftp ?
%% srv dhcp tftp <TFTP server name>
% Now: TF123
```

```
> srv dhcp tftpdel
% The TFTP Server Name had been deleted !!!
```

Telnet Command: srv dhcp option

This command can set the custom option for the DHCP server.

Syntax

```
srv dhcp option -h

srv dhcp option -d < idx >

srv dhcp option -e < 1 or 0 > -i < lan number > -s < Next Server IP Address >

srv dhcp option -e < 1 or 0 > -i < lan number > -c < option number > -v < option value >

srv dhcp option -e < 1 or 0 > -i < lan number > -c < option number > -x < option value >

srv dhcp option -e < 1 or 0 > -i < lan number > -c < option number > -a < option value >

srv dhcp option -u < idx unmber >
```

Syntax Description

Parameter	Description
-h	It means to display usage of this command.
-1	It means to display all the user defined DHCP options.
-d <idx></idx>	It means to delete the option number by specifying its index number.
-e <1 or 0>	It means to enable/disable custom option feature. 1:enable 0:disable
-i <lan number=""></lan>	<pre><lan number=""> : It means to specify the LAN interface. 1: lan1 a: all LAN r: routed subnet</lan></pre>
-s <next ip<br="" server="">Address></next>	It means to set the next server IP address. Next Server IP Address: Enter an IP address.
-c <option number></option 	It means to set option number. Available number ranges from 0 to 255. option number: Enter a number.
-v <option value=""></option>	It means to set option number by typing string. option value: Enter a string.
-x <option value=""></option>	It means to set option number with the format of Hexadecimal characters. option value: Enter a number (hex).
-a <option value=""></option>	It means to set the option value by specifying the IP address. option value: Enter an IP address.
-u <idx number=""></idx>	It means to update the option value of the sepecified index. idx number: Enter the index number of the option value.
-r	Remove all the DHCP server options.

```
> srv dhcp option -e 1 -i 1 -s 8.8.8.8
```

```
> srv dhcp option -1
% state idx interface opt type data
% enable 1 ALL LAN 18 ASCII /path
```

Telnet Command: srv nat dmz

This command allows users to set DMZ host. Before using this command, please set WAN IP Alias first.

Syntax

srv nat dmz n m [-<command> <parameter> | ...]

Syntax Description

Parameter	Description
[<command/> <parameter>]</parameter>	The available commands with parameters are listed below. [] means that you can Enter several commands in one line.
n	It means to map selected WAN IP to certain host. 1: wan1 2: wan2
m	It means the index number (1 to 8) of the DMZ host. Default setting is "1" (WAN 1). It is only available for Static IP mode. If you use other mode, you can set 1 ~ 8 in this field. If WAN IP alias has been configured, then the number of DMZ host can be added more.
-e	It means to enable/disable such feature. 1:enable 0:disable
- <i>i</i>	It means to specify the private IP address of the DMZ host.
-r	It means to remove DMZ host setting.
-V	It means to display current status.

Example

Telnet Command: srv nat ipsecpass

This command allows users to enable or disable IPSec ESP tunnel passthrough and IKE source port (500) preservation.

Syntax

srv nat ipsecpass [options]

Syntax Description

Parameter	Description
[options]	The available commands with parameters are listed below.
on	It means to enable IPSec ESP tunnel passthrough and IKE source port (500) preservation.
off	It means to disable IPSec ESP tunnel passthrough and IKE source port (500) preservation.
status	It means to display current status for checking.

Example

```
> srv nat ipsecpass status
%% Status: IPsec ESP pass-thru and IKE src_port:500 preservation is OFF.
```

Telnet Command: srv nat openport

This command allows users to set open port settings for NAT server.

Syntax

srv nat openport n m [-<command> <parameter> | ...]

Parameter	Description
[<command/> <parameter>]</parameter>	The available commands with parameters are listed below. [] means that you can Enter several commands in one line.
n	It means the index number for the profiles. The range is from 1 to 40.
m	It means to specify the sub-item number for this profile. The range is from 1 to 10.
-a <enable></enable>	It means to enable or disable the open port rule profile. 0: disable 1:enable
-c <comment></comment>	It means to Enter the description (less than 23 characters) for the defined network service.
-l <source idx="" ip=""/>	It means to set source IP object. 1 to 192: for IP object 1 to 32: for IP group 0: Any For example: srv nat openport 1 1 -l 1 -g 0
-g <source ip="" type=""/>	It means to set IP type. 0: IP object 1: IP group

	For example: srv nat openport 1 1 -l 1 -g 0
-i <local ip=""></local>	It means to set the IP address for local computer. Local ip: Type an IP address in this field.
-w <widx><ipidx></ipidx></widx>	widx: Specify the public IP. 1: WAN1 Default, 2: WAN1 Alias 1, and so on. ipidx: Specify the index number of an alias IP (1 to 32).
-p <protocol></protocol>	Specify the transport layer protocol. Available values are TCP, UDP and ALL.
-s <start port=""></start>	It means to specify the starting port number of the service offered by the local host. The range is from 0 to 65535.
-e <end port=""></end>	It means to specify the ending port number of the service offered by the local host. The range is from 0 to 65535.
-V	It means to display current settings.
-r <remove></remove>	It means to delete the specified open port setting. remove: Enter the index number of the profile.
-f <flush></flush>	It means to return to factory settings for all the open ports profiles.

Telnet Command: srv nat portmap

This command allows users to set port redirection table for NAT server.

Syntax

srv nat portmap add <idx> <serv name> <proto> <pub port> <src ip type> <src ip idx> <pri ip> <pri port> <wan idx> <alias IP>

srv nat portmap del <idx>

srv nat portmap disable <idx>

srv nat portmap enable <idx><proto>

srv nat portmap flush

srv nat portmap table

srv nat portmap view

Syntax Description

Parameter	Description
add <idx></idx>	It means to add a new port redirection table with an index number. Available index number is from 1 to 40.
<serv name=""></serv>	It means to type one name as service name.
<pre><pre><pre></pre></pre></pre>	It means to specify TCP or UDP as the protocol.
<pub port=""></pub>	It means to specify which port can be redirected to the specified Private IP and Port of the internal host.
<src ip="" type=""></src>	It means to specify the IP type (object or group). ip type: 0 means IP object; 1 means IP group.
<src idx="" ip=""></src>	It means to specify the index number of the object profile. ip idx: 1 to 192 for IP object profile; 1 to 32 for IP group profile. 0 means any object or group.
<pri ip=""></pri>	It means to specify the private IP address of the internal host providing the service.
<pri port=""></pri>	It means to specify the private port number of the service offered by the internal host.
<wan idx=""></wan>	It means to specify WAN interface for the port redirection. Idx: wan1 to wan4, all
<alias ip=""></alias>	It means to specify an alias IP by entering the index number (1 to 32). ip: 1 to 32.
del <idx></idx>	It means to remove the selected port redirection setting.
disable <idx></idx>	It means to inactivate the selected port redirection setting.
enable <idx></idx>	It means to activate the selected port redirection setting.
flush	It means to clear all the port mapping settings.
table	It means to display Port Redirection Configuration Table.
view	It means to display the setting for the selected profile.

```
> srv nat portmap add 1 floor tcp 1500 1 1 192.168.1.1 3000 wan1 1
> srv nat portmap table
```

NAT Po	ort Redirection	Configura	tion Tak	le:				
Index	Service Name	Protocol	Public	Port	Private II)	Private	Port ifno
1	floor	TCP	1500	192.	168.1.11		3000	-1
2		0	0			0	-2	
3		0	0			0	-2	
4		0	0			0	-2	
5		0	0			0	-2	
6		0	0			0	-2	
7		0	0			0	-2	
8		0	0			0	-2	
9		0	0			0	-2	
10		0	0			0	-2	
11		0	0			0	-2	
12		0	0			0	-2	
13		0	0			0	-2	
14		0	0			0	-2	
15		0	0			0	-2	
16		0	0			0	-2	
17		0	0			0	-2	
18		0	0			0	-2	
19		0	0			0	-2	
20		0	0			0	-2	

Telnet Command: srv nat trigger

This command allows users to configure port triggering settings for NAT.

Syntax

srv nat trigger setdefault
srv nat trigger view
srv nat trigger n [-<command> <parameter> | ...]

Parameter	Description
setdefault	Set to factory default settings.
view	Dispaly all of the port triggering settings.
n <command/> <parameter>/]</parameter>	"n" means the rule number. The available commands with parameters are listed below. [] means that you can type in several commands in one line.
-c <xxx></xxx>	Type a comment for such rule if required.
-e <0/1>	Enable (1) or disable (0) a rule (specified with rule number).
-p <1/2/3>	Specify the protocol for such trigger rule. 1 - TCP 2 - UDP

	3 - All
-t	Specify the port number (0-65535) for trigger.
-P <1/2/3>	Specify the incoming protocol for such trigger rule. 1 - TCP 2 - UDP 3 - All
-i	Specify the port number (0-65535) for incoming protocol.
-d	Delete the selected trigger rule.
-V	Display the port trigger settings for specified rule.

```
> srv nat trigger 1 -c after_dinner
DrayTek> srv nat trigger 1 -v

Port Trigger Rule Index:1

Status:Disable
Comment:after_dinner
Triggering Protocol:
Triggering Port:
Incoming Protocol:
Incoming Port:
DrayTek>
```

Telnet Command: srv nat status

This command allows users to view NAT Port Redirection Running Table.

> srv nat status					
NAT Po	ort Redire	ction Runni	ng Table:		
Index	Protocol	Public Por	t Private IP	Private Port	
1	6	1500	192.168.1.11	3000	
2	0	0	0.0.0.0	0	
3	0	0	0.0.0.0	0	
4	0	0	0.0.0.0	0	
5	0	0	0.0.0.0	0	
6	0	0	0.0.0.0	0	
7	0	0	0.0.0.0	0	
8	0	0	0.0.0.0	0	
9	0	0	0.0.0.0	0	
10	0	0	0.0.0.0	0	
11	0	0	0.0.0.0	0	
12	0	0	0.0.0.0	0	
13	0	0	0.0.0.0	0	
14	0	0	0.0.0.0	0	
15	0	0	0.0.0.0	0	
16	0	0	0.0.0.0	0	
17	0	0	0.0.0.0	0	

Telnet Command: srv nat showall

This command allows users to view a summary of NAT port redirection setting, open port and DMZ settings.

Example

> srv	> srv nat showall ?					
Index	Proto	WAN IP:Port	Private IP:Port	Act		
*****	*****	********	********	******		
R01	TCP	0.0.0:1500	192.168.1.1:3000	Y		
001	TCP	0.0.0.0:56~83	192.168.1.55:56~83	Y		
D01	All	0.0.0.0	192.168.1.96	Y		
R:Port Redirection, O:Open Ports, D:DMZ						

Telnet Command: srv nat pseudoctl

This command allows users to check the pseudo port number to prevent from port conflict.

Syntax

srv nat pseudoctl session <value>
srv nat pseudoctl function <0-3>

Syntax Description

Parameter	Description	
session <value></value>	Set the threshold of the session. <value>: o to 2147483647.</value>	
function <0-3>	O: It means "Auto". Check the created pseudo port number automatically when the session number is over the threshold. 1: It means "Not". Create a pseudo port number based on subnet setting. No verification.	
	2: It means "Must". Check the created pseudo port number if it is used by other client.3: Create a pseudo port number. No verification.	

```
> srv nat pseudoctl function 2
pesudo port: get hash pseudo port + subnet.
pseudo port search: check pseudo port(Must).
```

```
> srv nat pseudoctl function 3
pesudo port: get hash pseudo port.

> srv nat pseudoctl function 0
pesudo port: get hash pseudo port + subnet.
pseudo port search: check pseudo port(Auto).
```

Telnet Command: srv nat RSTTimeout

This command is used for forwarding RST out via TCP after a period of time.

Syntax

srv nat RSTTimeout <value>

Syntax Description

Parameter	Description
<value></value>	Set the timeout value.
	<value>: 0 to 10 (one unit is 10msec).</value>

```
> srv nat RSTTimeout 2
Set timeout 2 unit
> %% srv RSTtimeout <value> (unit is 10msec). (0<=value<=10)
-----
now timeout set 2 unit
>
```

Telnet Command: switch -i

This command is used to obtain the TX (transmitted) or RX (received) data for each connected switch.

Syntax

switch -i <switch idx_no> <option>

Syntax Description

Parameter	Description
<switch idx_no=""></switch>	It means the index number of the switch profile.
option	The available commands with parameters are listed below. cmd acc traffic <on off="" rx="" status="" tx=""></on>
cmd	It means to send command to the client.
acc	It means to set the client authentication account and password.
traffic <on off="" rx="" status="" tx=""></on>	It means to turn on/off or display the data transmission from the client.

Example

```
> switch -i 1 traffic on

External Device NO. 1 traffic statistic function is enable
```

Telnet Command: switch status

This command is used to check the status for the auto discovery of external devices.

Example

```
> switch -i 1 traffic on

External Device auto discovery status : Enable

No Respond to External Device : Enable

Display External Device syslog : Enable
```

Telnet Command: switch not_respond

This command is used to detect the external device automatically and display on this page.

Syntax

switch not_respond 0
switch not_respond 1

|--|

0	Disable the option of "No Respond to External Device packets".
1	Enable the option of "No Respond to External Device packets".

```
> switch not_respond 1
slave not respond!
>
```

Telnet Command: switch on

This command is used to turn on the auto discovery for external devices.

Example

```
> switch on
Enable Extrnal Device auto discovery!
```

Telnet Command: switch off

This command is used to turn off the auto discovery for external devices.

Example

```
> switch off
Disable External Device auto discovery!
```

Telnet Command: switch list

This command is used to display the connection status of the switch.

Example

Telnet Command: switch clear

This command is used to reset the switch table and reboot the router.

Syntax

switch clear [idx]

Syntax Description

Parameter	Description
idx	It means the index number of each item shown on the table. The range is from 1 to 8.
-f	It means to clear all of the data.

Example

```
> switch clear 1
Switch Data clear successful
> switch clear -f
Switch Data clear successful
```

Telnet Command: switch query

This command is used to enable or disable the switch query.

Example

```
> switch query on

Extern Device status query is Enable
> switch query off

Extern Device status query is Disable
```

Telnet Command: switch syslog

This command is used to enable or disable the external device syslog.

Example

```
> switch syslog on
Extern Device status is Enable
> switch syslog off
Extern Device status is Disable
```

Telnet Command: sys admin

This command is used for RD engineer to access into test mode of Vigor router.

Telnet Command: sys adminuser

This command is used to create user account and specify LDAP server. The server will authenticate the local user who wants to access into the web user interface of Vigor router.

Syntax

sys adminuser [option]

sys adminuser edit [index] username password

Syntax Description

Parameter	Description
option	Available options includes: Local [0-1] LDAP [0-1] edit [INDEX] delete [INDEX] view [INDEX]
Local [0-1]	0 - Disable the local user. 1 - Enable the local user.
LDAP [0-1]	0 - Disable the LDAP. 1 - Enable the LDAP.
edit [INDEX] username password	Edit an existed user account or create a new local user account. [INDEX] - 1 -8. There are eight profiles to be added / edited. Username - Type a new name for local user. Password - Type a password for local user.
delete [INDEX]	Delete a local user account.
view [INDEX]	Show the user account/password detail information.

Example

```
> sys adminuser Local 1
Local User has enabled!
> sys adminuser LDAP 1
LDAP has enabled!
> sys adminuser edit 1 carrie test123
Updated!
> sys adminuser view 1
Index:1
User Name:carrie
User Password:test123
```

Telnet Command: sys board

This command is used to disable/enable and configure the panel control.

Syntax

sys board button def <on/off>
sys board button wlan <on/off>
sys board led control <on/off>
sys board led sleepMode <on/off>
sys board led sleepMode time <minute>
sys board usb <p1/p2> <on/off>

Parameter	Description
button def <on off=""></on>	The default reset button will be invalid if turn it off. On - The button is valid. Off - The button is invalid.
Button wlan <on off=""></on>	The wireless button will be invalid if turn it off. On - The button is valid. Off - The button is invalid.
led control <on off=""></on>	All LEDs on the front panel will be invalid if turn it off. On - The LEDs are valid. Off - The LEDs are invalid.
led sleepMode <on off=""></on>	All LEDs on the front panel will be set in sleep mode. On - The sleep mode is on. Off - The sleep mode is off. If the sleep mode is on, push the "wireless button" and the "factory reset button" to turn the LED on (even the buttons are disabled).
led sleepMode time [minutes]	After enableing the sleep mode for all LEDs, they will sleep after the minutes configured here. Minutes: Enter the number of the time.
usb <p1 p2=""> <on off=""></on></p1>	The USB port <p1 p2=""> will be invalid if turn it off. On - The port is valid. Off - The port is invalid.</p1>

- > sys board usb p2 off
 USB port2 power is off now.
- > sys board usb p2 on
 USB port2 power is on now.

Telnet Command: sys bonjour

This command is used to disable/enable and configure the Bonjour service.

Syntax

sys bonjour [-<command> <parameter> | ...]

Syntax Description

Parameter	Description
-e <enable></enable>	It is used to disable/enable bonjour service (0: disable, 1: enable).
-h <enable></enable>	It is used to disable/enable http (web) service (0: disable, 1: enable).
-t <enable></enable>	It is used to disable/enable telnet service (0: disable, 1: enable).
-f <enable></enable>	It is used to disable/enable FTP service (0: disable, 1: enable).
-s <enable></enable>	It is used to disable/enable SSH service (0: disable, 1: enable).
-p <enable></enable>	It is used to disable/enable printer service (0: disable, 1: enable).
-6 <enable></enable>	It is used to disable/enable IPv6 (0: disable, 1: enable).

Example

```
> sys bonjour -s 1 >
```

Telnet Command: sys cfg

This command reset the router with factory default settings. When a user types this command, all the configuration will be reset to default setting.

Syntax

sys cfg default sys cfg status

Syntax Description

Parameter	Description
default	It means to reset current settings with default values.
status	It means to display current profile version and status.

```
> sys cfg status
Profile version: 4.0.0 Status: 1 (0x9df515cf)
>
```

Telnet Command: sys cmdlog

This command displays the history of the commands that you have typed.

Example

```
> sys cmdlog
  [1] sys board ?
  [2] sys board button ?
  [3] sys led ?
  [4] sys board led ?
  [5] sys board led sleepMode ?
  [6] sys board usb ?
  [7] sys board usb p2 off
  [8] sys board usb p2 on
  [9] sys ?
  [10] sys bonjour ?
  [11] sys cfg ?
  [12] sys cfg status
  [13] sys cmdlog ?
  [14] sys cmdlog
```

Telnet Command: sys ftpd

This command displays current status of FTP server.

Syntax

sys ftpd *on* sys ftpd *off*

Syntax Description

Parameter	Description
on	It means to turn on the FTP server of the system.
off	It means to turn off the FTP server of the system.

Example

```
> sys ftpd on
% sys ftpd turn on !!!
```

Telnet Command: sys domainname

This command can set and remove the domain name of the system when DHCP mode is selected for WAN.

Syntax

sys domainname <wan1> <Domain Name Suffix> sys domainname <wan1> clear

Parameter	Description
<wan1></wan1>	It means to specify WAN interface for assigning a name for it.
<domain name="" suffix=""></domain>	It means the name for the domain of the system. The maximum number of characters that you can set is 39.
clear	It means to remove the domain name of the system.

```
> sys domainname wan1 clever
> DrayTek> sys domainname ?
% sys domainname <wan1> <Domain Name Suffix (max. 39 characters)>
% sys domainname <wan1> clear
% Now: wan1 == clever
>
```

Telnet Command: sys iface

This command displays the current interface connection status (UP or Down) with IP address, MAC address and Netmask for the router.

```
> sys iface
Interface 0 Ethernet:
Status: UP
IP Address: 192.168.1.1
                           Netmask: 0xFFFFFF00 (Private)
IP Address: 0.0.0.0
                          Netmask: 0xFFFFFFFF
MAC: 14-49-BC-0A-8A-B8
Interface 3 PPPoE:
Status: UP
IP Address: ---
                       Netmask: 0xFFFFFFF
MAC: 14-49-BC-0A-8A-B9
Interface 4 Ethernet:
Status: UP
IP Address: 0.0.0.0
                          Netmask: 0x0000000
MAC: 14-49-BC-0A-8A-BA
Interface 5 Ethernet:
Status: UP
IP Address: 0.0.0.0
                          Netmask: 0x0000000
MAC: 14-49-BC-0A-8A-BB
Interface 7 Ethernet:
Status: DOWN
IP Address: 0.0.0.0
                          Netmask: 0x00000000
MAC: 14-49-BC-0A-8A-BD
Interface 8 Ethernet:
Status: DOWN
                          Netmask: 0x00000000
IP Address: 0.0.0.0
MAC: 14-49-BC-0A-8A-BE
--- MORE --- ['q': Quit, 'Enter': New Lines, 'Space Bar': Next Page] ---
```

Telnet Command: sys name

This command can set and remove the name for the router when DHCP mode is selected for WAN.

Syntax

```
sys name <wan1> <ASCII string>
sys name <wan1> clear
```

Syntax Description

Parameter	Description
<wan1></wan1>	It means to specify WAN interface for assigning a name for it.
ASCII string>	It means the name for router. The maximum character that you can set is 39.

Example

```
> sys name wan1 drayrouter
> sys name ?
% sys name <wan1/wan2> <ASCII string (max. 20 characters)>
% sys name <wan1/wan2> clear
% Now: wan1 == drayrouter, wan2 ==
```

Note: Such name can be used to recognize router's identification in SysLog dialog.

Telnet Command: sys passwd

This command allows users to set password for the administrator.

sys passwd <old password> <new password>

Syntax Description

Parameter	Description
old password	Enter the old password.
new password	Enter a string as the new password for administrator. The maximum character that you can set is 83.

Example

```
> sys passwd admin admin123
Password change successful !!!
```

Telnet Command: sys reboot

This command allows users to restart the router immediately.

Example

```
> sys reboot
>
```

Telnet Command: sys autoreboot

This command allows users to restart the router automatically within a certain time.

Syntax

sys autoreboot <on/off/hour(s)>

Syntax Description

Parameter	Description
<on off=""></on>	On - It means to enable the function of auto-reboot. Off - It means to disable the function of auto-reboot.
<hours></hours>	It means to set the time schedule for router reboot. For example, if you type "2" in this field, the router will reboot with an interval of two hours.

```
> sys autoreboot on
autoreboot is ON
> sys autoreboot 2
autoreboot is ON
autoreboot time is 2 hour(s)
```

Telnet Command: sys commit

This command allows users to save current settings to FLASH. Usually, current settings will be saved in SRAM. Yet, this command will save the file to FLASH.

Example

```
> sys commit >
```

Telnet Command: sys tftpd

This command can turn on TFTP server for upgrading the firmware.

Example

```
> sys tftpd
% TFTP server enabled !!!
```

Telnet Command: sys cc

This command can display current country code and wireless region of this device.

Example

```
> sys cc
Country Code : 0x 0 [International]
Wireless Region Code: 0x30
>
```

Telnet Command: sys version

This command can display current version for the system.

```
> sys version
Router Model: Vigor2135ac     Version: 4.3.1_STD English
Profile version: 4.0.0     Status: 1 (0x9df515cf)
Router IP: 192.168.1.1     Netmask: 255.255.255.0
Firmware Build Date/Time: Nov 25 2020 14:24:25
Router Name: DrayTek
Revision: 94071 V421
Router serial no: None
>
```

Telnet Command: sys grybuf

This command can display the system memory status and leakage list.

Example

```
> sys qrybuf
System Memory Status and Leakage List
Buf sk_buff ( 200B), used#: 1647, cached#: 30
Buf KMC4088 (4088B), used#: 0, cached#: 8
Buf KMC2552 (2552B), used#: 1641, cached#: 42
Buf KMC1016 (1016B), used#: 7, cached#:
Buf KMC504 (504B), used#: 8, cached#: 8
Buf KMC248 ( 248B), used#: 26, cached#: 22
Buf KMC120 ( 120B), used#: 67, cached#: 61
Buf KMC56 ( 56B), used#: 20, cached#:
                                         44
Buf KMC24 ( 24B), used#: 58, cached#:
                                         70
Dynamic memory: 13107200B; 4573168B used; 190480B/0B in level 1/2 cache.

```

Telnet Command: sys pollbuf

This command can turn on or turn off polling buffer for the router.

Syntax

sys pollbuf <on/off>

Syntax Description

Parameter	Description
on	It means to turn on pulling buffer.
off	It means to turn off pulling buffer.

Example

```
> sys pollbuf on
% Buffer polling is on!
> sys pollbuf off
% Buffer polling is off!
```

Telnet Command: sys britask

This command can improve triple play quality.

Syntax

sys britask <on/off>

Syntax Description

Parameter	Description
on	It means to turn on the bridge task for improving the triple play quality.
off	It means to turn off the bridge task.

Example

```
> sys britask on
% bridge task is ON, now
```

Telnet Command: sys tr069

This command can set CPE settings for applying in VigorACS.

Syntax

```
sys tr069 get <parm> <option>
sys tr069 set <parm> <value>
sys tr069 getnoti <parm>
sys tr069 setnoti <parm> <value>
sys tr069 log
sys tr069 debug <on/off>
sys tr069 save
sys tr069 inform <event code>
sys tr069 port <port num>
sys tr069 cert_auth<on/off>
sys tr069 only_standard_parm <on/off>
sys tr069 notify -S
sys tr069 notify -n <on/off>
sys tr069 notify -I <on/off>
sys tr069 notify -c <on/off>
sys tr069 notify -b <on/off>
sys tr069 notify -B "<WAN number> <Medium threthold> <High threthold> <TX Speed>Mb <RX
```

Syntax Description

Speed>Mb"

Parameter	Description
get <parm> <option></option></parm>	It means to get parameters for tr-069. option= <nextlevel>: only gets nextlevel for GetParameterNames.</nextlevel>
set <parm> <value></value></parm>	It means to set parameters for tr-069.
getnoti <parm></parm>	It means to get parameter notification value.

setnoti <parm> <value></value></parm>	It means to set parameter notification value.
log	It means to display the TR-069 log.
debug <on off=""></on>	on: turn on the function of sending debug message to syslog. off: turn off the function of sending debug message to syslog.
save	It means to save the parameters to the flash memory of the router.
Inform <event code=""></event>	It means to inform parameters for tr069 with different event codes. [event code] includes: 0-"0 BOOTSTRAP", 1-"1 BOOT", 2-"2 PERIODIC", 3-"3 SCHEDULED", 4-"4 VALUE CHANGE", 5-"5 KICKED", 6-"6 CONNECTION REQUEST", 7-"7 TRANSFER COMPLETE", 8-"8 DIAGNOSTICS COMPLETE", 9-"M Reboot"
port <port num=""></port>	It means to change tr069 listen port number.
cert_auth <on off=""></on>	on: turn on certificate-based authentication. off: turn off certificate-based authentication.
only_standard_parm <on off=""></on>	It means to turn on or off to exclude all the Vendor-Specific ("X_") parameters, and only send out standard parameters.
notify -n <on off=""></on>	It means to set CPE notification settings. It means to / not to record the CPE notify log on the Syslog. on: Record on the Syslog. off: Not record on the Syslog.
notify -I <on off=""></on>	It means to / not to record the web login log on the Syslog. on: Record on the Syslog. off: Not record on the Syslog.
notify -c <on off=""></on>	It means to / not to record the web changed log on the Syslog. on: Record on the Syslog. off: Not record on the Syslog.
notify -b <on off=""></on>	It means to / not to record the bandwidth utilization log on the Syslog. on: Record on the Syslog. off: Not record on the Syslog.
notify -B " <wan number=""> <medium threthold=""> <high threthold> <tx speed="">Mb <rx speed="">Mb"</rx></tx></high </medium></wan>	It means to set bandwidth utilization setting. <wan number="">: Enter the index number of WAN interface(s). <medium threthold="">: Enter a value. <high threthold="">: Enter a value. <tx speed="">Mb: Enter a value. <rx speed="">Mb: Enter a value.</rx></tx></high></medium></wan>
-\$	Show the CPE notification settings.

Telnet Command: sys alg

This command can enable or disable ALG (Application Layer Gateway) master switch.

Syntax

sys alg <1/0>

Syntax Description

Parameter	Description
1	It means to enable ALG master switch.
0	It means to disable ALG master switch.

Example

```
> sys alg -e 1
Enable ALG

> sys alg
Usage: sys alg <command> <parameter>
  -e: enable ALG (0:disable, 1:enable)

Current ALG status
  -ALG Master Switch: Enabled
```

Telnet Command: sys sip_alg

This command can turn on/off SIP ALG (Application Layer Gateway) for traversal.

Syntax

sys sip_alg [<command> <parameter>|...]

Syntax Description

Parameter	Description
[<command/> <parameter>]</parameter>	The available commands with parameters are listed below. [] means that you can type in several commands in one line.
-e <0/1>	0: Disable the function of SIP ALG.1: Enable the function of SIP ALG.
-p <parameter></parameter>	It means to set the listening port for SIP ALG. <pre><pre><pre><pre><pre><pre><pre><pre></pre></pre></pre></pre></pre></pre></pre></pre>
-U	It means to enable or disable the listen along UDP path setting. 0: Disable 1: Enable
-t	It means to enable or disable the listen along TCP path setting. 0: Disable 1: Enable

Example

```
> sys sip_alg -e 1
Enable SIP ALG
> sys sip_alg -p 65535
Current listening port: 65535
> sys sip_alg ?
Usage: sys sip_alg <command> <parameter>
-e: enable SIP ALG (0:disable, 1:enable)
-p: set your listening port for SIP ALG
-u: enable listen along UDP path (0:disable, 1:enable)
-t: enable listen along TCP path (0:disable, 1:enable)
Current SIP ALG status
-ALG Master Switch: Enabled
-SIP ALG: Enabled
-Listen along UDP path: Yes
-Listen along TCP path: Yes
-Listening Port: 65535
-Max sipalg session num: 256
-Remain sipalg session num: 256
```

Telnet Command: sys rtsp_alg

This command can turn on/off RTSP ALG (Application Layer Gateway) for traversal.

Syntax

sys rtsp_alg [<command> <parameter>|...]

Parameter	Description
[<command/>	The available commands with parameters are listed below.

<parameter>]</parameter>	[] means that you can type in several commands in one line.
-e <0/1>	Disable the function of RTSP ALG. Enable the function of RTSP ALG.
-p <parameter></parameter>	It means to set the listening port for RTSP ALG. <pre><pre><pre><pre><pre><pre><pre><pre></pre></pre></pre></pre></pre></pre></pre></pre>
-u	It means to enable or disable the listen along UDP path setting. 0: Disable 1: Enable
-t	It means to enable or disable the listen along TCP path setting. 0: Disable 1: Enable
-V	It displays RTP and RTCP portmap information of RTSP ALG.

```
> sys rtsp_alg -e 1
Enable RTSP ALG
> sys rtsp_alg -p 60000
Current listening RTSP Port: 60000
> sys rtsp_alg -v
Current Open PortMap Number of RTSP ALG: 0
> sys rtsp_alg ?
Usage: sys rtsp_alg <command> <parameter>
-e: enable RTSP ALG (0:disable, 1:enable)
-p: set your listening port for RTSP ALG
-u: enable listen along UDP path (0:disable, 1:enable)
-t: enable listen along TCP path (0:disable, 1:enable)
-v: show rtp and rtcp portmap information of RTSP ALG
Current RTSP ALG status
-ALG Master Switch: Enabled
-RTSP ALG: Enabled
-Listen along UDP path: Yes
-Listen along TCP path: Yes
-Listening Port: 60000
-Max RTSP session num: 256
 -Remain RTSP session num: 256
```

Telnet Command: sys license

This command can process the system license.

Syntax

sys license reset_regser

sys license licera

sys license licifno <AUTO/WAN#>

sys license licalias <index>

sys license lic_trigger

sys license licelog

Syntax Description

Parameter	Description
reset_regser	It means the license register server setting, or register service in portal??
licera	It means to erase license setting.
licifno <auto wan#=""></auto>	It means license and signature download interface setting.
licalias <index></index>	It means to specify an IP alias by entering the index number of the IP alias profile.
lic_trigger	It means to trigger the license.
licelog	It means to show the authentication log.

```
> sys license licifno wan1
Download interface is set as "WAN1" now.
```

Telnet Command: sys diag_log

This command is used for RD debug.

Syntax

sys diag_log <status| enable| disable| flush| lineno <w> | level <x> | feature <on|off><y>| voip_feature <on|off> <vf_name> | log>

Syntax Description

Parameter	Description
status	It means to show the status of diagnostic log.
enable	It means to enable the function of diag_log.
disable	It means to disenable the function of diag_log.
flush	It means the flush log buffer.
lineno <w></w>	It means the total lines for displaying message. w - Available value ranges from 100 to 50000.
level <x></x>	It determines the level of data displayed. x - Available value ranges from 0 to 12. The larger the number is, the detailed the data is displayed.
feature <on off> <y></y></on off>	It is used to specify the function of the log. Supported features include SYS and DSL (Case-Insensitive). Default setting is "on" for "DSL".
voip_feature <on off> <vf_name></vf_name></on off>	It means VoIP feature. Type on to enable the feature or type off to disable the feature.
	vf_name: available settings include DRVTAPI, DRVVMMC, DRVMPS, DRVFXO, DRVHAL, PSMPHONE, PSMSUPP, PSM, FXO, PSMISDN, DTMFPSER, CALLERID (Case-Insensitive).
log	It means the dump log buffer.

```
> sys diag_log status
Status:
diag_log is Enabled.
lineno : 10000.
level : 3.
Enabled feature: SYS DSL
> sys diag_log log
0:00:02 [DSL] Current modem firmware: AnnexA_548006_544401
0:00:02 [DSL] Modem firmware feature: 5, ADSL_A, VDSL2
0:00:02 [DSL] xtseCfg=04 00 04 00 0c 01 00 07
0:00:02 [DSL] don't have last showtime mode!! set next mode to VDSL!!

=2
0:00:05 [DSL] Line state has changed: 000000FF -> 00000100
0:00:05 [DSL] Line state has changed: 00000100 -> 00000200
0:00:05 [DSL] Status was switched: Init(5) to Train(6)
```

Telnet Command: sys arp_AutoReq

This command is used to enable / disable the function that Vigor router sends ARP request to the connected device(s) periodically.

Syntax

sys arp_AutoReq -d <value>

Syntax Description

Parameter	Description
-d <value></value>	Disable the function of ARP auto request. 0 - Enable 1 - Disable

Example

```
> sys arp_AutoReq -d 1
Arp auto-request disable.
```

Telnet Command: sys daylightsave

This command is used to conifgure day light saving.

Syntax

sys daylightsave [-<command> <parameter> | ...]

Parameter	Description
[<command/> <parameter>]</parameter>	The available commands with parameters are listed below. [] means that you can type in several commands in one line.
-V	Display the daylight saving settings.
-r	Set to factory default setting.
-e [1/0]	Enable (1) / disable (0) daylight saving.
-t [0/1/2]	Specify the saving type for daylight setting. 0 - Default 1 - Time range 2 - Yearly
-s <year> <month> <day> <hour></hour></day></month></year>	Set the detailed settings of the starting day for time range type. year - must be the year after 2013. month - 1 ~ 12 day - 1 ~ 31 hour - 0 ~ 23 e.g., sys daylightsave -s 2014 3 10 12

-d <year> <month> <day></day></month></year>	Set the detailed settings of the ending day for time range type.
<hour></hour>	year - After 2013.
	month - 1 ~ 12
	day - 1 ~ 31
	hour - 0 ~ 23
	e.g., sys daylightsave -d 2014 9 10 12
-y <month> <day in="" week=""> <hour></hour></day></month>	Set the detailed settings of the starting day for yearly type. month - 1 ~ 12
	th weekday - 1 ~ 5, 9: last week
	day in week - 0:Sun, 1:Mon, 2:Tue, 3:Wed, 4:Thu, 5: Fri, 6:Sat
	hour - 0 ~ 23
	e.g, sys daylightsave -y 9 1 0 14
-z <month> <day in="" week=""> <hour></hour></day></month>	Set the detailed settings of the ending day for yearly type. month - 1 ~ 12
	th weekday - 1 ~ 5, 9: last week
	day in week - 0:Sun, 1:Mon, 2:Tue, 3:Wed, 4:Thu, 5: Fri, 6:Sat
	hour - 0 ~ 23
	e.g, sys daylightsave -z 3 1 6 14

```
> sys daylightsave -y 9 1 0 14
% Start: Yearly on Sep 1th Sun 14:00
>
```

Telnet Command: sys dnsCacheTbl

This command is used to configure TTL settings which will be displayed in DNS Cache table.

Syntax

sys dnsCacheTbl [<command><parameter>|...]

Syntax Description

Parameter	Description
[<command/> <parameter>]</parameter>	The available commands with parameters are listed below. [] means that you can type in several commands in one line.
-1	It means to show DNS IPv4 entry in DNS cache table.
-S	It means to show DNS IPv6 entry in DNS cache table.
-V	It means to show TTL limit value in DNS cache table.
-t <ttl></ttl>	It means to set TTL limit value. <ttl>: 0(no limit) or an number greater than 5.</ttl>
-C	It means to clear the DNS cache table.

```
> sys daylightsave -y 9 1 0 14
% Start: Yearly on Sep 1th Sun 14:00
DrayTek> sys dnsCacheTbl -t 50
% Set TTL limit: 50 seconds.
% When TTL larger than 50s , delete the DNS entry in the router's DNS cache tabl
```

```
e.
> sys dnsCacheTbl -v
% TTL limit: 50 seconds
% When TTL larger than 50s , delete the DNS entry in the router's DNS cache tabl
>
```

Telnet Command: sys syslog

This command is used to conifgure day light saving.

Syntax

sys syslog -a <enable> [-<command> <parameter> | ...]

Syntax Description

Parameter	Description
[<command/> <parameter>]</parameter>	The available commands with parameters are listed below. [] means that you can type in several commands in one line.
-a <1/0>	Enable (1) or disable (0) Syslog Access Setup.
-s <1/0>	Enable (1) or disable (0) Syslog Save to Syslog Server.
-i <ip address=""></ip>	Define the IP address of the Syslog server.
-d <port number=""></port>	Define the port number (1 ~ 65535) as the destination port.
-u <1/0>	Enable (1) or disable (0) Syslog Save to USB Disk.
-m <1/0>	Enable (1) or disable (0) Mail Syslog.
-f <1/0>	Enable (1) or disable (0) Filewall Log.
-v <1/0>	Enable (1) or disable (0) VPN Log.
-e <1/0>	Enable (1) or disable (0) User Access Log.
-c <1/0>	Enable (1) or disable (0) Call Log.
-w <1/0>	Enable (1) or disable (0) WAN Log.
-r <1/0>	Enable (1) or disable (0) Router/DSL Information.
-t <1/0>	Enable (1) or disable (0) AlertLog Setup.
-o <port number=""></port>	Define the port number (1 ~ 65535) for AlertLog.

Example

```
> sys syslog -a 1 -s 1 -i 192.168.1.25 -d 514
>
```

Telnet Command: sys mailalert

This command is used to configure settings for syslog mail alert.

Syntax

sys mailalert [-<command> <parameter>]

Parameter	Description
[<command/> <parameter>]</parameter>	The available commands with parameters are listed below. [] means that you can type in several commands in one line.

-e <0/1>	Enable/disable Mail Alert.		
-e <0/1>	0 - Disable, 1 - Enable.		
0/1/2/			
-w <0/1/2/>	Set Interface (Physical) Any/WAN1/WAN2/WAN and etc.		
-x <wan alias="" index="" ip=""></wan>	Set WAN IP Alias. Index 1 is reserved and must set an interface first.		
-i <smtp ip="" server=""></smtp>	Set IP Address for SMTP server.		
-o <smtp port="" server=""></smtp>	Set port number for SMTP server		
-a <mail address=""></mail>	Set E-maiil address for alert mail reciver.		
-r <mail address=""></mail>	Set E-mail Address for mail return.		
-s <0/1>	Enable/disable the function of Use SSL.		
	0 - Disable. 1 - Enable.		
-h <0/1>	Enable/disable SMTP Authentication.		
	0 - Disable. 1 - Enable.		
-u <username></username>	Set username for SMTP Authentication.		
-p <password></password>	Set password for SMTP Authentication.		
-I <type><0/1></type>	Enable / disable mail alert for different types. Number 0 ~ 6 represent different types.		
	"0 <0/1>" : Enable/Disable Mail Alert of the DoS Attack.		
	"1 <0/1>" : Enable/Disable Mail Alert of the APPE.		
	"2 <0/1>" : nable/Disable Mail Alert of the VPN Log.		
	"3 <0/1>" : Enable/Disable Mail Alert of the APPE Signature.		
	"6 <0/1>" : Enable/Disable Mail Alert of the Reboot Debug Log.		
	In which,		
	0 - Disable. 1 - Enable.		
-f	Reset Mail Alert setting to factory default.		
-V	Show current Mail Alert setting.		
-R <0/1>	Set Mail Alert Reboot debug log mode.		
	0: Limited Mode		
	1: Unlimited Mode.		

```
> sys mailalert -e 1
Set Enable Mail Alert.
> sys mailalert -v
----- Current setting for Mail Alert -----
Mail Alert: Enable
SMTP Server IP Address: 0.0.0.0
SMTP Server Port: 25
Alert Mail Reciver E-maiil Address:
Mail Return E-mail Address:
Use SSL: Disable
SMTP Authentication: Disable
Username for SMTP Authentication:
Password for SMTP Authentication:
Mail Alert for DoS Attack: Enable.
Mail Alert for APPE: Enable.
Mail Alert for VPN Log: Enable.
Mail Alert for APPE Signature: Disable.
Mail Alert for Reboot Debug Log: Disable, Mode: Limited.
_____
```

Telnet Command: sys time

This command is used to configure system time and date.

Syntax

sys time server <domain>
sys time inquire
sys time show
sys time zone <index>

Parameter	Description
domain	Enter the domain name of the time server. The maximum length is 39 characters.
index	Different number means different time zone.
	1 - GMT-12:00 Eniwetok, Kwajalein
	2 - GMT-11:00 Midway Island, Samoa
	3 - GMT-10:00 Hawaii
	4 - GMT-09:00 Alaska
	5 - GMT-08:00 Pacific Time (US & Canada)
	6 - GMT-08:00 Tijuana
	7 - GMT-07:00 Mountain Time (US & Canada)
	8 - GMT-07:00 Arizona
	9 - GMT-06:00 Central Time (US & Canada)
	10 - GMT-06:00 Saskatchewan
	11 - GMT-06:00 Mexico City, Tegucigalpa
	12 - GMT-05:00 Eastern Time (US & Canada)
	13 - GMT-05:00 Indiana (East)
	14 - GMT-05:00 Bogota, Lima, Quito
	15 - GMT-04:00 Atlantic Time (Canada)
	16 - GMT-04:00 Caracas, La Paz
	17 - GMT-04:00 Santiago
	18 - GMT-03:30 Newfoundland
	19 - GMT-03:00 Brasilia

Telnet Command: sys dashboard

This command is used to display / hide items (such as System Information, Interface...) on dashboard.

Syntax

```
sys dashboard [-<command> <value> | ... ] sys dashboard show
```

Parameter Description

```
> sys dashboard -0 1
Front Panel enabled
> sys dashboard show
Front Panel enabled
System Information enabled
IPv4 LAN Information enabled
IPv4 Internet Access enabled
IPv6 Internet Access enabled
Interface enabled
Security enabled
System Resource enabled
LTE Status enabled
Quick Access enabled
VoIP enabled
>
```

Telnet Command: testmail

This command is used to display current settings for sending test mail.

```
> testmail
Send out test mail
Mail Alert:[Enable]
Interface :Any
WAN_Alias index:[0]
SMTP_Server:[0.0.0.0]
SMTP_Port:[25]
Mail to:[]
Return-Path:[]
Connection Security:[Plaintext]
```

Telnet Command: upnp off

This command can close UPnP function.

Example

```
>upnp off
UPNP say bye-bye
```

Telnet Command: upnp on

This command can enable UPnP function.

Example

```
>upnp on
UPNP start.
```

Telnet Command: upnp nat

This command can display IGD NAT status.

```
> upnp nat ?
InternalClient >>0.0.0.0<<, RemoteHost >>0.0.0.0<</pre>
InternalPort >>0<<, ExternalPort >>0<<</pre>
PortMapProtocol >>(null)<<
The tmpvirtual server index >>0<<
PortMapLeaseDuration >>0<<, PortMapEnabled >>0<<
<NULL>
((1))
InternalClient >>0.0.0.0<<, RemoteHost >>0.0.0.0<</pre>
InternalPort >>0<<, ExternalPort >>0<<</pre>
PortMapProtocol >>(null)<<</pre>
The tmpvirtual server index >>0<<

PortMapLeaseDuration >>0<<, PortMapEnabled >>0<<
<NULL>
--- MORE --- ['q': Quit, 'Enter': New Lines, 'Space Bar': Next Page] ---
```

Telnet Command: upnp service

This command can display the information of the UPnP service. UPnP service must be enabled first.

Example

```
> upnp on
UPNP start.
> upnp service
>>>> SERVICE TABLE1 <
 serviceType urn:schemas-microsoft-com:service:OSInfo:1
 serviceId urn:microsoft-com:serviceId:OSInfol
            /upnp/OSInfo.xml
 SCPDURL
 controlURL /OSInfol
 eventURL
            /OSInfoEvent1
 UDN
          uuid:f6c9fedc-6c5d-41f4-992e-1449bc0a8ab8
>>>> SERVICE TABLE2 <
 serviceType

 eventURL
           uuid:2b84726d-d351-43ab-b96a-f601ff9818b3.
 UDN
```

Telnet Command: upnp subscribe

This command can show all UPnP services subscribed.

```
> upnp on
UPNP start.
> upnp subscribe
>>>> (1) serviceType urn:schemas-microsoft-com:service:OSInfo:1

>>>> (2) serviceType
urn:schemas-upnp-org:service:WANCommonInterfaceConfig:1

>>>> (3) serviceType
urn:schemas-upnp-org:service:WANPOTSLinkConfig:1
```

```
>>>> (4) serviceType urn:schemas-upnp-org:service:WANPPPConnection:1
>>>> (5) serviceType urn:schemas-upnp-org:service:WANIPConnection:1
>
```

Telnet Command: upnp tmpvs

This command can display current status of temp Virtual Server of your router.

Example

Telnet Command: upnp wan

This command is used to specify WAN interface to apply UPnP.

Syntax

upnp wan <n>

Syntax Description

Parameter	Description
<n></n>	It means to specify WAN interface (0 to 3) to apply UPnP. n=0, it means to auto-select WAN interface.
	n=1, WAN1
	n=2, WAN2

```
> upnp wan 1 use wan1 now.
```

Telnet Command: usb list

This command is use to display the information about the brand name and model name of the USB modems which are supported by Vigor router.

> usb list ?

Telnet Command: usb user

total 66 records

This command is used to set profiles for FTP/SMB users.

Syntax Description

usb user add <Index> <Username> <Password> <Permission> <Home path>
usb user rm <Index>
usb user enable <Index>
usb user disable <Index>
usb user list

Parameter	Description
add <index> <username> <password> <permission> <home path=""></home></permission></password></username></index>	Add a new user profile. <index>: It means the index number of the user profile. There are 16 profiles allowed to be configured. So the range of such option is 1 ~ 16.</index>
	<username>: Enter a text (maximum 131 characters) as the username for the user profile.</username>
	<pre><password>: Enter a text (maximum 131 characters) as the password for the user profile.</password></pre>
	<permission>: Specify the action (RWDLCR) permitted. If one of the actions is not allowed, simple type "-" instead.</permission>

	R - Read File.
	W - Write File.
	D - Delete File.
	L - List directory.
	C - Create directory.
	R - Remove selected directory.
	<home path="">: Set the path (maximum 159 characters) for the USB user profile.</home>
rm <index></index>	Delete an existed user profile.
	<index>: It means the index number of the user profile.</index>
enable <index></index>	Enable a user profile.
	<index>: It means the index number of the user profile.</index>
disable <index></index>	Disable a user profile.
·	<index>: It means the index number of the user profile.</index>
list	Display all of the user profile.

```
> usb user add 1 root 1234 R-DLCR /usr
> No usb storage is available!!
```

Telnet Command: usb temp

This command is to configure USB temperature.

Syntax Description

usb temp set <-c/-f/-a/-b/-m/-u/-l/-r>
usb temp show
usb temp all_data

Parameter	Description
set -c	Set the temperature unit (Celsius).
set -f	Set the temperature unit (Fahrenheit).
set -a	Set the temperature sensor by using a probe or the built-in sensor automatically. The probe will be detected and used first, and fall back to the built-in sensor if the probe is not detected.
set -b	Set to use the built-in sensor.
set -m	Enable or disable the Alarm Setting. 1: Enable 0: Disable
set -u <value></value>	Set the upper temperature limit. <pre><value>: Enter a value, e.g., 30.35.</value></pre>
set -l <value></value>	Set the lower temperature limit. <pre><value>: Enter a value, e.g., 10.35.</value></pre>
set -r	Shows the setting of temperature unit and sensor type.
show	Displays current temperature.

all_data	Displays all temperature data.
----------	--------------------------------

```
> usb temp set -r
Show setting:temp set -r

Alarm Settings: 0 (0:Disable, 1: Enable.)
upper temperature limit: 30.0 C
lower temperature limit: 18.0 C
unit: 0 (0:Celsius, 1: Fahrenheit.)
sensor: 0 (0:Auto select, 1: built-in.)
```

Telnet Command: vigbrg set

This command is to configure specified WAN as bridge mode.

Syntax Description

vigbrg set -v <IP version> -w <WAN_idx> -I <LAN_idx> -e <0/1> -f <0/1>

Syntax Description

Parameter	Description
-v <ip version=""></ip>	Indicate the IP version for the IP address.
	4 - IPv4.
	6 - IPv6.
-w <wan_idx></wan_idx>	WAN_idx - Indicate the WAN interface.
	1 - WAN1
	2 - WAN2
	3 - WAN3
	4 - WAN4
	5 - WAN5
-I <lan_idx></lan_idx>	LAN_idx - Indicate the LAN interface.
	1 - LAN1
	2 - LAN2
	3 - LAN3
	4 - LAN4
	5 - LAN5
	6 - LAN6 15 - LAN15
e <0/1>	Enable (1) or disable (0) the Vigor Bridge for WAN or/and LAN.
f <0/1>	Enable (1) or disable (0) the firewall functions.

Example

```
> vigbrg set -v 4 -w 3 -l 1 -e 1
[WAN3] IPv4 bridge is enable. Set subnet[LAN1]
```

Telnet Command: vigbrg closeall

This command can disable vigor bridge function.

```
> vigbrg closeall
Close all bridge and bridge firewall
[WAN3] IPv4 firewall is disable.
```

Telnet Command: vigbrg status

This command can show whether the Vigor Bridge Function is enabled or disabled.

Example

```
> vigbrg status
Show gConfig setting of bridge mode
```

Telnet Command: vigbrg cfgip

This command allows users to transfer a bridge modem into ADSL router by accessing into and adjusting specified IP address. Users can access into Web UI of the router to manage the router through the IP address configured here.

Syntax

vigbrg cfgip <IP Address>

Syntax Description

Parameter	Description
<ip address=""></ip>	It means to type an IP address for users to manage the router.

Example

```
> vigbrg cfgip 192.168.1.15
> vigbrg cfgip ?
% Vigor Bridge Config IP,
% Now: 192.168.1.15
```

Telnet Command: vigbrg wanstatus

This command can display the existed WAN connection status for the modem (change from ADSL router into bridge modem), including index number, MAC address, Stamp Time, PVC, VLAN port for Vigor Bridge Function..

```
> vigbrg wanstatus
Vigor Bridge: Stop
WAN mac table:
Index MAC Address Stamp Time PVC VLan Port
```

Telnet Command: vigbrg wlanstatus

This command can display the existed WLAN connection status for the modem (change from router into bridge modem), including index number, MAC address, Stamp Time, PVC, VLAN port for Vigor Bridge Function.

Example

```
> vigbrg wlanstatus
Vigor Bridge: Stop
WAN mac table:
Index MAC Address Stamp Time PVC VLan Port
```

Telnet Command: fullbrg

The command is used to enable Full Bridge Mode so that the router will work as a bridge modem which is able to forward incoming packets with VLAN tags.

Syntax

fullbrg status

fullbrg set -i <WAN index> -n <Subnet index> -b <Bridge mode>

Syntax Description

Parameter	Description
-i <wan index=""></wan>	At present, only WAN1 is available. <wan index="">: 1.</wan>
-n <subnet index=""></subnet>	Subnet index: Ranges from 1 to 8. 1: Subnet 1, 2: Subnet 2,etc.
-b <bridge mode=""></bridge>	It means to enable / disable Bridge mode. 0: OFF 1: ON

```
> fullbrg status
Show gConfig setting of full bridge
WAN 1 full bridge to LAN 1, mode=OFF.
> fullbrg set -i 1 -n 2 -b 1
Configure OK! Please reboot device to make it effective.
>
```

Telnet Command: voip debug

This command can display debug message on the screen.

Syntax

voip debug [flush]
voip debug [showmsg]

Syntax Description

Parameter	Description
flush	It means to clear current log.
showmsg	It means to show current log.

Example

```
> voip debug showmsg
-->Send Message to 192.168.1.2:5060 <02:35:16>
INVITE sip:192.168.1.2 SIP/2.0

From: <sip:change_me@192.168.1.1>;tag=WLJ-11782
To: <sip:192.168.1.2>
Call-ID: PbU-25312@192.168.1.1
CSeq: 1 INVITE
Contact: <sip:change_me@192.168.1.1>
Max-Forwards: 70
supported: 100rel, replaces
User-Agent: DrayTek UA-1.2.3 DrayTek Vigor2910
Allow: INVITE, ACK, CANCEL, OPTIONS, BYE, INFO, REFER, NOTIFY, PRACK
Content-Type: application/sdp
Content-Length: 264
v=0
o=change_me 5972727 56415 IN IP4 192.168.1.1
```

Telnet Command: voip dialplan

This command allows users to set phone book settings.

Syntax

```
voip dialplan block n [-<command><parameter>]
voip dialplan phonebook n [-<command><parameter>]
voip dialplan region [-<command><parameter>]
voip dialplan local [1/0]
```

Parameter	Description
voip dialplan block	
n	It means the index number of the VoIP settings. $n=1 \sim 20$
- <command/> <parameter></parameter>	The available commands with parameters are listed below.

-m 0/1	It means to enable or disable the block mode.
	0 - Disable
.,	1 - Enable
-p <path></path>	Determines the block path. 1:in_url,
	2:in_number
	3:out_url,
	4:out_number
	5:(in & out)_url,
	6:(in & out)_number))
-n <number></number>	Determines the block number (maximum 29 characters).
-d <domain></domain>	Block the specified domain.
-i <inf></inf>	Block the specified interface(s) or All interfaces.
-s <schedule></schedule>	Specify schedule profiles by indicating the index number of the schedule profile. Four schedule profiles can be used at one time.
-W	Delete the selected entry. N=null (clear all)
-V	List current settings.
voip dialplan phonebook	
n	It means the index number of the VoIP settings.
	n=1 ~ 60
- <command/> <parameter></parameter>	The available commands with parameters are listed below.
-d <number></number>	Specify the speed dial number.
-c <url></url>	Contact SIP URL I(max. 59 characters)
-n <name></name>	Contact name (max. 23 characters)
-a <enable></enable>	Enable/disable the specify entry.
-m <mode></mode>	Specify backup number mode.
	0 - none
	2 - PSTN
-b <number></number>	Spedify the backup number.
-o <acc num=""></acc>	Specify the dial out account.
	0 - default
	1 - acc1, 2 - acc2 ~ 12:=acc12
-z <enable></enable>	Enable/disable ZRTP/SRTP VoIP security. 1 - enable
	0 - disable
-1	Delete the specify entry.
-V	List current VoIP settings.
voip dialplan region	
-e	Dnable or disable the regional function.
C	1 - enable
	0 - disable
-m <number></number>	Return the last miss call.
-I <number></number>	Return the last incoming call.
-o <number></number>	Return the last outgoing call.
	-

-f <number></number>	Hotkey to enable call forwarding (busy) function.
-C <number></number>	Hotkey to enable call forwarding (no answer) function.
-c <number></number>	Hotkey to disable call forwarding function.
-W <number></number>	Hotkey to enable call waiting function.
-w <number></number>	Hotkey to disable call waiting function.
-H <number></number>	Hotkey to enable hide caller ID function.
-h <number></number>	Hotkey to disable hide caller ID function.
-D <number></number>	Hotkey to enable DND function.
-d <number></number>	Hotkey to disable DND function.
-A <number></number>	Hotkey to enable block anonymous calls function.
-a <number></number>	Hotkey to disable block anonymous calls function.
-U <number></number>	Hotkey to enable block unknow domain calls function.
-u <number></number>	Hotkey to disable block unknow domain calls function.
-P <number></number>	Hotkey to disable block IP calls function.
-p <number></number>	Hotkey to disable block IP calls function.
-I <number></number>	Hotkey to block last incoming call.
-V	List current status for Regional settings.
voip dialplan local	
enable/disable	Enable or disable the local calls.
	1 - enable
	0 - disable

```
> voip dialplan phonebook 1 -d 1125
> voip dialplan region -1 8
> voip dialplan region -v
Your Setting for Regional
Regional Function is: Enable
Return the Last Miss Call: 20
Return the Last Incoming Call: *12
Return the Last Outgoing Call: 1
Hotkey to enable call forwarding (all) function: 0
Hotkey to enable call forwarding (busy) function: *90
Hotkey to enable call forwarding (no answer) function: *92
Hotkey to disable call forwarding function: 12
Hotkey to Enable Call Waiting Function: *56
Hotkey to Disable Call Waiting Function: *57
Hotkey to Enable Hide Caller ID Function: *67
Hotkey to Disable Hide Caller ID Function: *68
Hotkey to Enable DND Function: *78
Hotkey to Disable DND Function: *79
Hotkey to Enable Block Anonymous Calls Function: *77
Hotkey to Disable Block Anonymous Calls Function: *87
Hotkey to Enable Block Unknow Domain Calls Function: *40
Hotkey to Disable Block Unknow Domain Calls Function: *04
Hotkey to Enable Block IP Calls Function: *50
Hotkey to Disable Block IP Calls Function: *05
```

Telnet Command: voip dsp

Syntax

voip dsp countrytone [channel] [value] voip dsp dialtonepwr [channel] [AbsoluteValue] voip dsp EchoCanceller [type] [w_size] [nlp] voip dsp cidtype [channel] [value] voip dsp micgain [channel] [value/(1~10)] voip dsp spkgain [channel] [value/(1~10)] voip dsp jitterBuffer [port] [mode] [value] voip dsp dtmfDetset [nLevel] [nTwist] voip dsp dtmftonepwr [Level] voip dsp cwtonepwr [ch] [value] voip dsp pstnringfxs [1/2] [on/off] voip dsp relaydbounce [on/off] voip dsp setRingPat [ring_pattern_index] [patten_num] voip dsp setDtmfCidlevel -I [value] voip dsp setDtmfCidlevel -h [value] voip dsp setDtmfCidlevel -r 0 voip dsp cidplusdigit [1/0] [channel] [value]

Parameter	Description
voip dsp countrytone	
[channel] [value]	This command allows users to set the region for the tone settings. Different regions usually need different tone settings.
	Channel - 1 or 2.
	Value - displayed as follows:
	[2] UK, [3] USA, [4] Denmark, [5] Italy, [6] Germany,
	[7] Netherlands, [8] Portugal, [9] Sweden, [10] Australia,
	[11] Slovenia, [12] Czech, [13] Slovakia, [14] Hungary,
	[15] Switzerland , [16] France , [17] Malta
voip dsp dialtonepwr	
channel	This setting is used to adjust the loudness of the dial tone. The smaller the number is, the louder the dial tone is. It is recommended for you to use the default setting.
	Channel - Available channel number: 1 - 2
AbsoluteValue	AbsoluteValue - In -1 dB increments, with 1 corresponding to 6 dBm.
	Range - 1 to 30
voip dsp EchoCanceler	
type	This command is used to set the type of echo reduction.
	0 - Disable the LEC processing.

1 - Cancel using the fixed window.2 - Cancel using the fixed and moving window.
2 - Cancel using the fixed and moving window.
3 - Cancel using fixed window + Echo Suppressor.
The Line Echo Canceller (LEC) window size is 4, 6, 8 or 16 (ms).
Nlp - Non-linear processing (NLP) for more smooth transitions.
1 - disable
0 - enable
Set the caller ID type for FXS 1 (Channel 1) or FXS 2 (Channel 2).
1 - FXS 1
2 - FXS 2
Each number (1 to 6) represents different type.
1 - FSK_ETSI
2 - FSK_ETSI(UK)
3 - FSK_BELLCORE(US/AU)
4 - DTMF
5 - DTMF(Dk)
6 - DTMF(SE,NL,FIN)
For example :
Vigor> voip dsp cidtype 2 6
channel=2, current cidType: 6
That means the caller ID type for FXS2 (Channel2) is DTMF (SE, NL, FIN).
Adjust the volume of microphone by entering number from 1- 10 for FXS 1 or FXS 2.
1 - FXS 1
2 - FXS 2
The larger the number is, the louder the volume will be.
Adjust the volume of speaker by entering number from 1- 10 for FXS 1 or FXS 2.
1 - FXS 1
2 - FXS 2
The larger the number is, the louder the volume will be.
·
Set the size of jitter buffer.
Available settings are 0 (FXS1) and 1 (FXS2).
Available settings are Fixed and Adaptive (default setting).
Available settings are 1 ~ 180 (unit: msec).
e.g.,
Vigor> voip dsp jb 1 FIXED 100
<u> </u>
Set the waiting time for dialing out.
Joe the waiting time for diating out.
It means to set the timer settings. The unit is mini-second. The
It means to set the timer settings. The unit is mini-second. The range is from 1 to 255. Value "1" is corresponding to 500ms. That is to say, Value "6" is corresponding 3000ms (i.e., 3 seconds) Timer: 1 ~ 20.

	Set the timer:20			
Voip dsp debugMsg				
?	Avaible settings include:			
	clrev - clear phone hook status.			
	getev - get phone hook status.			
	clrfskcid - clear fsk data for caller-ID from PSTN line.			
	getfskcid - get fsk data for caller-ID from PSTN line.			
	clrdtmfcid - clear dtmf data for caller-ID from PSTN line.			
	getdtmfcid - get dtmf data for caller-ID from PSTN line.			
	voicebuf - get message for available voice buffer pool.			
	clrint - clear status for interrupt.			
	getint - get status for interrupt.			
	Vigor> voip dsp debugMsg getint			
	the interrupt status for ad0 = 21			
	the interrupt status for ad1 = 0			
	the interrupt status for vc = 0			
voip dsp dtmfDetset				
nLevel	Set minimal signal level in dB, for DTMF detection.			
	Range - (-96 ~ -1)			
nTwist	Maximum allowed signal twist in dB, for DTMF detection.			
	Range - (0 ~ 12)			
voip dsp dtmftonepwr				
Level	Set power level for DTMF frequency.			
	Level - 0 ~ 100. Power level for dtmf frequency in 0.3 dB steps.			
	0 map to 0dB			
	1 map to -0.3dB 100 map to -30dB			
voip dsp cwtonepwr				
ch	Set the call waiting tone power level.			
	1 - FXS 1			
	2 - FXS 2.			
value	1 ~ 30, in -1 dB increments, with 1 corresponding to 8 dBm.			
voip dsp pstnringfxs				
1/2	Enable or disable PSTN ring on FXS 1/FXS 2.			
1/2	1 meansFXS1; 2 means FXS2.			
on loff				
on/off	On means enable; off means disable.			
voip dsp relaydbounce				
on/off	on: Enable relay filter noise. But it maybe ignore the caller-id!!!			
	off: Disable relay filter noise. But the noise will cause the relay to switch to PSTN!!!			
vois des estDissDet	SWILCH to F31N:::			
voip dsp setRingPat				
ring_pattern_index	This command can change the ring pattern at Index(2)-Index(6).			
	ring_pattern_index - Index (1) was locked for your country.			
patten_num	It's the ring pattern number (1~12) for a country.			
	notton num 1 Australia Dia Dattana			
	patten_num=1 Australia Ring Pattern:			
	cadenceOneOn=400, cadenceOneOff=200			
	cadenceTwoOn=400, cadenceTwoOff=2000			
	patten_num=2 Denmark Ring Pattern:			

	cadenceOneOn=1000, cadenceOneOff=4000				
voip dsp setFaxECmo	de -s				
ch	Set the FAX error correction mode.				
	ch : range (0 ~ 1)				
mode	mode: EC(error correction) ch(x) mode(0): REDUNDANCY				
voip dsp setDtmfCidle voip dsp setDtmfCidle	evel -l / voip dsp setDtmfCidlevel -h [value] evel -r 0				
value	"setDtmfCidLevel" is used to configure the signal strength for transferring to FXS DTMF caller ID. value - 0 ~ 64				
	voip dsp setDtmfCidLevel -l [value]				
	voip dsp setDtmfCidLevel -h [value]				
	voip dsp setDtmfCidLevel -r 0/1				
	r - reset low/high DTNF level to default setting. 0 means Disable;				
	means Enable.				
	Note: This function is supported only by special mode.				
voip dsp setfxoCY					
value	It is used to apply FXO country settings. 0: "use system country"				
	1: "Taiwan"				
	2: "Germany"				
	3: "Sweden" 4: "France"				
	5: "Switzerland"				
	6: "Holland"				
	7: "Finland"				
	8: "Denmark"				
	9: "UK"				
	10: "Australia" 12: "Italy"				
	12: Italy 14: "Red_China"				
	15: "Singapore"				
	17: "Spain"				
	18: "Portugal"				
	20: "Poland"				
	21: "Czech" 22: "Hungary"				
	22: "Hungary" 23: "Slovenia"				
	25: "Slovakia"				
	37: "Brasil"				
	61: "US"				
voip dsp setfxoringl					
value	It is used to configure detection ring voltage threshold to apply to FXO.				
	Available setting include:				
	0 : use driver default value				
	1 : Minimum voltage threshold: 25V				
	2 : Minimum voltage threshold: 35V				
	3 : Minimum voltage threshold: 45V				
	3 : Minimum voltage threshold: 45V				

value	Set FXO detect caller ID type.			
	It is available only for the model with FXO port.			
voip dsp cidplusdigit				
[1/0] [channel] [value]	Set the substitution (0~9) for '+' digit in caller ID.			
	1 - enable the substitution.			
	0 - disable the substitution.			
	channel - 0 (FXS 1) -1 (FXS 2)			
	value - 0 - 9			
voip dsp setRingThres				
port	Set the threshold for ring signal.			
	Port setting is "0" only.			
value	Available settings 0-250. Unit is ms.			
	The time is an approximate value.			
voip dsp setCidDetGain				
tx/rx gain	Set the gain value of caller ID detected.			
	Tx gain - Available settings -24 ~ 12. Default is 0.			
	Rx gain - Available settings -24 ~ 12. Default is -6.			

```
> voip dsp countrytone ?
VoIP has been disable. Please enable VoIP first.
> voip sip misc -D 0
System reboot now!

Telnet Command: voip rtp

Syntax

voip rtp codec [sip acc index][type|size|vad|one][value]
voip rtp dtmf [index] [mode|payloadtype][value]
voip rtp port [start|end] [value]
voip rtp symmetric [value]
voip rtp tos?

Parameter	Description			
voip rtp codec				
[sip acc index][type size vad one][v alue]	Set the voice coding. sip acc index -SIP account index number. Available number, 1 - 12. type - Available settings include 0. G.711MU 1. G.711A 2. G.729A/B 3. G.723 4. G.726_32 size - Five options, 0 means 10ms 1 means 20ms 2 means 30ms 3 means 40ms 5 means 60ms Vad - 0 means to Disable the function of Voice Active Detector (vad); 1 means to Enable the function of Voice Active Detector (vad). One - 0 means to Disable the function of single codec; 1 means to			
voip rtp dtmf	Enable the function of single codec.			
[index] [mode payloadtype][value]	Set the DTMF mode and Payload type for DTMF. Index - SIP account index number. Available number, 1 ~ 12. Mode - Four options to be selected. 0. Inband 1. Outband 2. SIP INFO (cisco) 3. SIP INFO (nortel) Payloadtype - Available settings 96~127. Value - Type 0-3 or 96~127 based on the mode specified. For example, > voip rtp dtmf 1 mode 1			
voip rtp port				
start/end	Specifies the start/end port for RTP stream.			
value	The default value is 10050/15000.			
voip rtp symmetric	•			
value	Make the data transmission going through on both ends of local router and remote router not misleading due to IP lost.			

	1 - Enable 0 - Disable
voip rtp tos	
value	Set the type of service (TOS) setting for RTP packets. For example, > voip rtp tos 0x899 Set TOS: 0x899

```
> voip rtp codec 1 type 3
> voip rtp dtmf 2 mode 3
> voip rtp port start 10070 end 14400
Set start port: 10070
> voip rtp port end 14400
Set end port: 14400
> voip rtp symmetric 1
Set symmetric rtp to Enable
```

Telnet Command: voip sip

This command allows users to set SIP account.

Syntax

```
voip sip acc n [-<command> <parameter> | ... ]
voip sip calllog
voip sip ep n [-<command> <parameter> | ... ]
voip sip misc[-<command> <parameter> | ... ]
voip sip nat [-<command> <parameter> | ... ]
```

Parameter	Description		
voip sip acc - Allows users to set SIP account.			
п	n = 1 to 12		
	It means the index number of the VoIP settings.		
-P [profile]	It means the name of the account profile (maximum 11 characters).		
-r [reg mode]	Set registration mode for SIP account.		
	0 - none		
	1 - auto		
	2 - wan1 only		
	3 - wan2 only		
	4 - lan/vpn		
	5 - PVC		
	6 - wan3 only		
	7 - wan4 only		
	8 - wan1 first		
	9 - wan2 first		
	10 - wan3 first		
	11 - wan4 first		
-o [port]	Set the port number for sending/receiving SIP message for building		

	a session. The default value is 5060.			
-d [domain]	Set the domain name or IP address of the SIP Registrar server. The maximum is 63 characters.			
-y [proxy]	Set domain name or IP address of SIP proxy server. The maximum is 63 characters.			
-b [enable]	Enable / disable outbound proxy by SIP account. 0 - disable 1 - enable			
-s [enable]	Enable / disable to locate SIP server (rfc 3263). 0 - disable 1 - enable			
-N [name]	Set SIP account display name. Name - max. 23 characters.			
-n [number]	Set SIP account number. Number - max. 63 characters.			
-a [id]	Set SIP authentication ID. Id - max. 63 characters.			
-A [enable]	Enable /disable to use SIP authentication ID. 0 - disable 1 - enable			
-p [passwd]	Set SIP account password (max. 63 characters).			
-e [sec]	Set expiry time (default 3600) for SIP account.			
-w [enable]	Enable to make phone call without registering.			
-m [mode]	Set NAT traversal mode. 0 - disable 1 - stun 2 - manual 3 - nortel			
-F [mode]	Set call forwarding mode. 0 - disable 1 - always 2 - busy 3 - no answer 4 - busy or no answer			
-u [url]	Set SIP URL for call forwarding (max. 63 characters).			
-t [sec]	Set call forwarding timer. For example, voip sip acc 1 -t 30			
-g [port]	Set the ring port for incoming call. For example, Port - r1 means FXS1; r2 means FXS2.			
-z [pattern]	Set account ring pattern (1 ~ 6).			
-i [enable]	Remove all bindings while they are un-registered. 0 means Disable; and 1 means Enable.			
-B <enable></enable>	Enable / disable the function of Broadsoft Call Control. 0 - disable 1 - enable			
-S [idx]	Enable and use alias IP to register. idx - 1 to 31. If 0 is used, such function will be disabled.			
-k [num1 num2]	Set backup wan list (first wan, second wan).			

	range: 1 to 4.			
-V	View current status for account settings.			
Voip sip calllog	Display current status for SIP call log.			
voip sip ep				
п	The index number of the VoIP settings.			
	n - 1, 2.			
-o [acc]	Available dial out account (1 ~ 12).			
-L [url]	Set SIP URL (max. 63 characters) for hot line.			
-l [enable]	Enable / disable the function of hot line.			
	0 - disable			
	1 - enable			
-W [enable]	Enable / disable the function of warm line. 0 - disable			
	1 - enable			
-w [enable]	Enable / disable the function of call waiting enable.			
-w [chabic]	0 - disable			
	1 - enable			
-E [enable]	Enable / disable the function of call waiting enable but only remind			
	one time.			
	0 - disable 1 - enable			
w complete				
-x <enable></enable>	Enable / disable the function of call transfer. 0 - disable			
	1 - enable			
-d [enable]	Enable / disable the function of DND (Do Not Disturb)			
	0 - disable			
	1 - enable			
-s [id]	Indicate DND schedule.			
	Id - s1, s2, s3, s4 (max. 4 schedule)			
-h [enable]	Enable / disable the function of calling line identification			
	restriction (CLIR). 0 - disable			
	1 - enable			
-u [mode]	Set CLIR mode.			
	0 - means "draft-ietf-sip-privacy"			
	1 - means "rfc 3323/3325)"			
-z [enable]	Enable / disable playing dial tone when registered on sip server.			
	0 - disable			
	1 - enable			
-n [enable]	Enable / disable session timer. 0 - disable			
	1 - enable			
-m [sec]	Set the value for session timer (unit: sec).			
-R [min,max]	Set the flash hook time range 100-2000 (unit: ms).			
-8 [enable]	Enable or disable T.38 fax relay feature. 0 - disable			
	1 - enable			

-V	View current settings.
voip sip misc - Allow	rs users to set miscellaneous settings for the device.
-c [enable]	Enable compact header to shorten the packet (0: disable, 1: enable).
-s [enable]	Change "#" into digit number. 0 - disable 1 - enable
-e [enable]	Enable Europe style flash hook operation mode. 0 - disable 1 - enable
-h [enable]	Enable/disable call hold mode based on protocol RFC2543 (0: disable, 1:enable).
-i [enable]	Enable CODEC change without Re-INVITE. 0 - disable 1 - enable
-p [enable]	Enable PRACK message. 0 - Not support PRACK. 1 - Support PRACK.
-P [enable]	Enable IP Call. 0 - Disable IP call. 1 - Enable IP call.
-H [enable]	SIP INFO packet will be sent out when encounting hook flash event. 0 - disable 1 - enable
-t [val]	Set the mode of User-Agent (e.g., phone, software, and device) for SIP packet. 0 - Hide SIP header "User-Agent". 1 - Show SIP header "User-Agent". 2 - Use default "User-Agent" value. 3 - Use user-defined "User-Agent" value.
-u UAValue	For every SIP user agent identifies itself with a string, this command allows you to set the value (e.g, IP address, phone number, e-mail address) of User-Agent. The length of the string must be less than 64 characters.
-D [disable]	Disable VoIP Service. 1 - disable VoIP service. 0 - enable VoIP service. System will automatic reboot to activate voip service
-V	View current status for miscellaneous settings.
voip sip nat - Allows	users to set NAT Traversal Setting.
-s [server]	Set the IP address for STUN server.
-t [sec]	Set ping interval for SIP account. Sec - 6 ~ 600
-i [ip]	Indicate external IP address.
-V	View current settings for SIP NAT.

Telnet Command: voip secure

This command allows users to enable or disable secure phone feature, and SAS voice prompt.

Syntax

voip secure general [-<command> <parameter> | ...]

Syntax Description

Parameter	Description
voip secure general -e	Enable / disable secure phone feature. 0 - disable 1 - enable
voip secure general -p	Enable /disable SAS voice prompt. 0 - disable 1 - enable
voip secure general -v	view only secure phone general settings

```
> voip secure general -v
secure phone feature is disabled
SAS voice prompt is enabled
```

```
> voip secure general -p 0
SAS voice prompt is disabled
```

Telnet Command: vlan group

This command allows you to set VLAN group. You can set four VLAN groups. Please run vlan restart command after you change any settings.

Syntax

vlan group id <set/set_ex><p1/p2/p3/p4/s1/s2/s3/s4>

Syntax Description

Parameter	Description			
id	It means the group 0 to 7 for VLAN.			
set	It indicates each port can join more than one VLAN group.			
set_ex	It indicates each port can join one VLAN group at one time.			
p1/p2/p3/p4	It indicates LAN port 1 to LAN port 4. To group LAN1, LAN2, LAN3 and/or LAN4 under one VLAN group, please type the port number(s) you want.			
s1/s2/s3/s4	It is only available for WALN models.			

Example

Telnet Command: vlan off

This command allows you to disable VLAN function.

Syntax

vlan off

Example

```
> vlan off
VLAN is Disable!
  Force subnet LAN2/3/4/5/6/7/8 to be disabled!!
>
```

Telnet Command: vlan on

This command allows you to enable VLAN function.

Syntax

vlan on

```
> vlan on
VLAN is Enable!
>
```

Telnet Command: vlan pri

This command is used to define the priority for each VLAN profile setting.

Syntax

vlan pri *n pri_no*

Syntax Description

Parameter	Description			
n	It means VLAN ID number. n=VLAN ID number (from 0 to 7).			
pri_no	It means the priority of VLAN profile. pri_no=0 ~7 (from none to highest priority).			

Example

```
> vlan pri 1 2
VLAN1: Priority=2
>
```

Telnet Command: vlan restart

This command can make VLAN settings restarted with newest configuration.

Syntax

vlan restart

Example

```
> vlan restart ?

VLAN restarts!!!
>
```

Telnet Command: vlan status

This command display current status for VLAN.

Syntax

vlan status

```
> vlan status

VLAN is Enable :
```

VLAN	Enable	VID	Pri	p1	р2	р3	p4	s1	s2	s3	s4	5gs1	5gs	2 5g	s3	5gs4	subnet
0	OFF	0	0														1:LAN1
1	OFF	0	2														1:LAN1
2	OFF	0	0														1:LAN1
3	OFF	0	0	V				V	V				V	V			1:LAN1

>																	

Telnet Command: vlan subnet

This command is used to configure the LAN interface used by the VLAN group.

Syntax

vlan subnet group_id <1/2/3/4>

Syntax Description

Parameter	Description
<1/2/3/4>	It means interfaces, LAN1 ~ LAN4.

Example

```
> vlan subnet group_id 2
% Vlan Group-0 using LAN2 !
This setting will take effect after rebooting.
Please use "sys reboot" command to reboot the router.
```

Telnet Command: vlan submode

This command changes the VLAN encapsulation mechanisms in the LAN driver.

Syntax

vlan submode <on/off/status>

Syntax Description

Parameter	Description
on	It means to enable the promiscuous mode.
off	It means to enable the normal mode.
status	It means to display if submode is normal mode or promiscuous mode.

```
> vlan submode status
% vlan subnet mode : normal mode
> vlan submode on
% vlan subnet mode modified to promiscuous mode.
```

Telnet Command: vlan tagged

This command is used to enable or disable the incoming of untagged packets.

Syntax

vlan tagged <n> <on/off>
vlan tagged <unlimited> <on/off>
vlan tagged <p1_untag> <on/off>

Syntax Description

Parameter	Description			
<n></n>	It means VLAN number. The ranage is from 0 to 15.			
<on off=""></on>	It means to enable/disable the tagged VLAN.			
<unlimited> <on off=""></on></unlimited>	unlimited on: It allows the incoming of untagged packets even all VLAN are tagged. unlimited off: It does not allows the incoming of untagged packets.			
<p1_untag> <on off=""></on></p1_untag>	P1_untag on: It allows the incoming of untagged packets form LAN port 1. P1_untag off: It does not allow the incoming of untagged packets from LAN port 1.			

Example

```
> vlan tagged unlimited on
Unlimited mode is ON
>
```

Telnet Command: vlan vid

This command is used to configure VID number for each VLAN channel.

Syntax

vlan vid <n> <vid_no>

Syntax Description

Parameter	Description			
<n></n>	It means VLAN channel. The ranage is from 0 to 7.			
<vid_no></vid_no>	It means the value of VLAN ID. Type the value as the VLAN ID number. The range is form 0 to 4095.			

```
> vlan vid 1 4095
VLAN1, vid=4095
>
```

Telnet Command: vlan sysvid

This command is used to modify and show the scope (reserved 78) of the VLAN IDs used internally by the system.

Syntax

vlan sysvid < show / n>

Syntax Description

Parameter	Description			
show	It means to show the scope of VLAN ID used internally.			
n	It means the value to be set as VLAN ID.			
	The range is from 0 to 4018.			

Example

```
> vlan sysvid 100
You have set system VLAN ID to range: 100 ~ 177,
We recommend that you reboot the system now.
>
```

Telnet Command: vpn I2Iset

This command allows users to set advanced parameters for LAN to LAN function.

Syntax

```
vpn l2lset </ist index> peerid peerid>
vpn l2lset </ist index> localid </oralid>
vpn l2lset </ist index> main <auto/proposal index>
vpn l2lset </ist index> aggressive <desg1/desg2/aesg1/aesg2/aesg5/aesg14>
vpn l2lset </ist index> pfs <on/off>
vpn l2lset </ist index> phase 1 lifetime>
vpn l2lset </ist index> phase2 lifetime>
vpn l2lset </ist index> x509localid <0/1>
vpn l2lset </ist index> compress <0/1/2/3>
```

Parameter	Description
tist index>	It means the index number of L2L (LAN to LAN) profile.
peerid <peerid></peerid>	It means the peer identity for aggressive mode.
localid <localid></localid>	It means the local identity for aggressive mode.
main <auto index="" proposal=""></auto>	It means to choose proposal for main mode.

	<auto>: Choose default proposals.</auto>
	<pre><pre><pre><pre><pre><pre><pre><pre></pre></pre></pre></pre></pre></pre></pre></pre>
aggressive <desg1 <br="" aesg1="" aesg2="" desg2="">aesg5/aesg14></desg1>	It means the chosen DH group for aggressive mode.
pfs <on off=""></on>	It means "perfect forward secrete".
	<on off="">: Turn on or off the PFS function.</on>
phase1 <lifetime> /</lifetime>	It means phase 1 or 2 of IKE.
phase2 <lifetime></lifetime>	<pre>lifetime>: Set the lifetime value (in second) for phase 1 and phase 2.</pre>
x509localid <0/1>	It means to enable (1) or disable (0) the X509 local ID.
compress <0/1/2/3>	It means to set the compress setting.
	<0/1/2/3>: Enter a number.
	0: Disable
	1: No
	2: LZ4
	3: LZO

```
> vpn 121set 1 peerid 10226
>
```

Telnet Command: vpn I2IDrop

This command allows users to terminate current LAN to LAN VPN connection.

Syntax

vpn I2IDrop *I2Iname <name>*vpn I2IDrop *I2Iidx <idx>*vpn I2IDrop *h2Iname <name>*vpn I2IDrop *h2idx <idx>*vpn I2IDrop *<ifno>*vpn I2IDrop

Parameter	Description
I2Iname <name></name>	It means to drop VPN connection by specifying the name of the LAN to LAN profile.
I2Iidx <idx></idx>	It means to drop VPN connection by specifying the index number of LAN to LAN profile.
h2Iname <name></name>	It means to drop VPN connection by specifying the name of the remote dial-in user profile.
h2idx <idx></idx>	It means to drop VPN connection by specifying the index number of the remote dial-in user profile.
<ifno></ifno>	It means to drop VPN connection by using VPN ifno.
12IDrop	It means to drop all VPN connections.

```
> vpn l2lDrop l2lidx 2
% Drop 0 VPN with idx : 2
>
```

Telnet Command: vpn I2IDialout

This command allows users to terminate current LAN to LAN VPN connection (dial-out).

Syntax

vpn l2lDialout <idx>
vpn l2lDialout list

Syntax Description

Parameter	Description
l2lDialout <idx></idx>	It means to build VPN connection by specifying the index number of dial-out LAN to LAN profile. <idx>: Enter an index number (1 to 32).</idx>
list	It means to display LAN to LAN profiles (enabled).

Example

```
> vpn 121Dialout 1
Profile Index: 1 not enable!!!
> vpn 121Dialout list
List LAN to LAN profiles of the status as Enable
Index Profile Active Status
% Drop 0 VPN with idx : 2
>
```

Telnet Command: vpn dinset

This command allows users to configure setting for remote dial-in VPN profile.

Syntax

```
vpn dinset </ist index>
vpn dinset </ist index> con/off>

vpn dinset </ist index> username <USERNAME>
vpn dinset </ist index> password <PASSWORD>
vpn dinset </ist index> motp <on/off>
vpn dinset </ist index> pin_secret <pin> <secret>
vpn dinset </ist index> timeout <0~9999>
vpn dinset </ist index> dintype <Type> <on/off>
vpn dinset </ist index> srnode <on/off>
vpn dinset </ist index> remoteip <Remote_Client_IP_Address>
```

vpn dinset t index> peer <Peer_ID>

vpn dinset
/block>

vpn dinset

vpn dinset /block>

vpn dinset <list index> prekey <on/off>

vpn dinset t index> assignkey <Pre_Shared_Key>

vpn dinset t index> digsig <on/off>

vpn dinset <list index> ipsec <Method> <on/off>

vpn dinset t index> localid <Local_ID>

Parameter	Description
t index>	It means the index number of the profile.
t index> <on off=""></on>	It means to enable or disable the profile. tindex> - Enter the index number of the VPN profile. <on off=""> - on: Enable; off: Disable.</on>
t index> motp <on off=""></on>	It means to enable or disable the authentication with mOTP function. list index> - Enter the index number of the VPN profile. <on off=""> - on: Enable; off: Disable.</on>
t index> pin_secret<pin> <secret></secret></pin>	It means to set PIN code with secret. st index - Enter the index number of the VPN profile. <pin> - Type the code for authentication (e.g, 1234). <secret> - Use the 32 digit-secret number generated by mOTP in the mobile phone (e.g., e759bb6f0e94c7ab4fe6)</secret></pin>
t index> timeout -9999>	It means to set idle timeout. The default is 300 (seconds). tindex> - Enter the index number of the VPN profile. <0~9999> - Enter a value.
t index> dintype <type> <on off=""></on></type>	It means to enable/disable the allowed dial-in type. tist index> - Enter the index number of the VPN profile. <type> - 0 to 3. In which, 0 means PPTP; 1 means IPsec Tunnel; 2 means L2TP with IPsec Policy; 3 means SSL Tunnel. <on off=""> - on: Enable; off: Disable.</on></type>
vpn dinset <list index=""> subnet <0-4></list>	It means to set the LAN subnet for the selected VPN profile. tindex> - Enter the index number of the VPN profile. <0-4> - Enter a number to specify the LAN subnet. In which, 0:LAN1 1:LAN2 2:LAN3 3:LAN4 4:DMZ
vpn dinset <list index=""> assignip <on off=""></on></list>	It means to enable or disable the function of assigning the static IP address. index> - Enter the index number of the VPN profile. <on off=""> - on: Enable; off: Disable.</on>
vpn dinset <list index=""></list>	It means to enable or disable the function of specifying the remote

srnada van /aff.	nada
srnode <on off=""></on>	node. tindex> - Enter the index number of the VPN profile. <on off=""> - on: Enable; off: Disable.</on>
vpn dinset <list index=""> remoteip <remote_client_ip_address ></remote_client_ip_address </list>	It means to enable or disable the function of assigning remote client IP. list index> - Enter the index number of the VPN profile. <remote_client_ip_address> - Set the IP address of the remote client.</remote_client_ip_address>
vpn dinset <list index=""> peer <peer_id></peer_id></list>	It means to assign the peer ID. tindex> - Enter the index number of the VPN profile. - Enter the string of the peer ID.
vpn dinset <list index=""> naming <pass block=""></pass></list>	It means to set the Netbiod Naming Packet for the VPN profile. list index> - Enter the index number of the VPN profile. <pass block=""> - Let the packet pass or block the packet.</pass>
vpn dinset <list index=""> multicastvpn <pass block=""></pass></list>	It means to set the multicast via VPN for IGMP, IP-CAM, DHCP relay, and etc. list index> - Enter the index number of the VPN profile. <pass block=""> - Let the packet pass or block the packet.</pass>
vpn dinset <list index=""> prekey <on off=""></on></list>	It means to enable/disable the Pre-Shared Key setting for IKE Authentication Method. list index> - Enter the index number of the VPN profile. <on off=""> - on: Enable; off: Disable.</on>
vpn dinset <list index=""> assignkey <pre_shared_key></pre_shared_key></list>	It means to set the Pre-Shared Key for IKE Authentication Method. list index> - Enter the index number of the VPN profile. <pre><pre_shared_key> - Enter a string as PSK.</pre_shared_key></pre>
vpn dinset <list index=""> digsig <on off=""></on></list>	It means to enable/disable the digital signature (X.509) for IKE Authentication Method. list index> - Enter the index number of the VPN profile. <on off=""> - on: Enable; off: Disable.</on>
vpn dinset <list index=""> ipsec <method> <on off=""></on></method></list>	It means to enable / disable and set the protocol for IPsec security method. ist index> - Enter the index number of the VPN profile. - Enter a number (0 to 3) to specify the protocol. 0 means Medium(AH) High(ESP), 1 means DES 2 means 3DES 3 means AES <on off=""> - on: Enable; off: Disable.</on>
vpn dinset <list index=""> localid <local_id></local_id></list>	It means to set local ID (optional) for IPsec Security Method. st index> - Enter the index number of the VPN profile. <local_id> - Enter the string of local ID.</local_id>

> vpn dinset 1

Status: Active

Mobile OTP: Enabled

PIN: 1234

Secret: e759bb6f0e94c7ab4fe6

Idle Timeout: 300 sec
```

Telnet Command: vpn subnet

This command allows users to specify a subnet selection for the specified remote dial-in VPN profile.

Syntax

vpn subnet <index> <1/2/3/4>

Syntax Description

Parameter	Description
<index></index>	It means the index number of the VPN profile.
<1/2/3/4>	1 - it means LAN1 2 - it means LAN2. 3 - it means LAN3 4 - it means LAN4.

```
> vpn subnet 1 2
>
```

Telnet Command: vpn setup

This command allows users to setup VPN for different types.

Syntax

Command of PPTP Dial-Out

vpn setup <index> <name> pptp_out <ip> <usr> <pwd> <nip> <nmask>

Command of IPSec Dial-Out

vpn setup <index> <name> ipsec_out <ip> <key> <nip> <nmask>

Command of L2Tp Dial-Out

vpn setup <index> <name> l2tp_out <ip> <usr> <pwd> <nip> <nmask>

Command of Dial-In

vpn setup <index> <name> dialin <ip> <usr> <pwd> <key> <nip> <nmask>

Parameter	Description
For PPTP Dial-Out	·
<index></index>	It means the index number of the profile.
<name></name>	It means the name of the profile.
<ip></ip>	It means the IP address to dial to.
<usr> <pwd></pwd></usr>	It means the user and the password required for the PPTP connection.
<nip> <nmask></nmask></nip>	It means the remote network IP and the mask.
	e.g., vpn setup 1 name1 pptp_out 1.2.3.4 vigor 1234 192.168.1.0 255.255.255.0
For IPsec Dial-Out	
<index></index>	It means the index number of the profile.
<name></name>	It means the name of the profile.
<ip></ip>	It means the IP address to dial to.
<key></key>	It means the value of IPsec Pre-Shared Key.
<nip> <nmask></nmask></nip>	It means the remote network IP and the mask.
	e.g., vpn setup 1 name1 ipsec_out 1.2.3.4 1234 192.168.1.0 255.255.255.0
For L2TP Dial-Out	
<index></index>	It means the index number of the profile.
<name></name>	It means the name of the profile.
<ip></ip>	It means the IP address to dial to.
<usr> <pwd></pwd></usr>	It means the user and the password required for the L2TP connection.
<nip> <nmask></nmask></nip>	It means the remote network IP and the mask.
	e.g.,, vpn setup 1 name1 l2tp_out 1.2.3.4 vigor 1234 192.168.1.0 255.255.255.0
For Dial-In	<u> </u>

<index></index>	It means the index number of the profile.
<name></name>	It means the name of the profile.
<ip></ip>	It means the IP address allowed to dial in.
<usr> <pwd></pwd></usr>	It means the user and the password required for the PPTP/L2TP connection.
<key></key>	It means the value of IPsec Pre-Shared Key.
<nip> <nmask></nmask></nip>	It means the remote network IP and the mask.
	e.g., vpn setup 1 name1 dialin 1.2.3.4 vigor 1234 abc 192.168.1.0 255.255.255.0

```
> vpn setup 1 name1 dialin 1.2.3.4 vigor 1234 abc 192.168.1.0 255.255.255.0
% Profile Change Log ...

% Profile Index : 1
% Profile Name : name1
% Username : vigor
% Password : 1234
% Pre-share Key : abc
% Call Direction : Dial-In
% Type of Server : ISDN PPTP IPSec L2TP
% Dial from : 1.2.3.4
% Remote NEtwork IP : 192.168.1.0
% Remote NEtwork Mask : 255.255.255.0
>
```

Telnet Command: vpn option

This command allows users to configure settings for LAN to LAN profile.

Syntax

vpn option <index> <cmd1>=<param1> [<cmd2>=<para2> | ...]

Parameter	Description
<index></index>	It means the index number of the profile. Available index numbers: 1 ~ 32
For Common Settings	
<index></index>	It means the index number of the profile.
pname	It means the name of the profile.
ena	It means to enable or disable the profile. on - Enable off - Disable
thr	It means the way that VPN connection passes through. Available settings are wlf, wlo, w2f, and w2o.

	w1f - WAN1 First.
	w1o - WAN1 Only.
	w2f - WAN2 First.
	w2o - WAN2 Only.
nnpkt	It means the NetBios Naming Packet.
	on - Enable the function to pass the packet.
	off - Disable the function to block the packet.
dir	It means the call direction. Available settings are b, o and i.
	b - Both
	o - Dial-Out
	i - Dial-In.
idla [valua]	
idle=[value]	It means Always on and Idle Time out.
	Available values include:
	-1 - it means always on for dial-out.
	0 - it means always on for dial-in.
	Other numbers (e.g., idle=200, idle=300, idle=500) mean the router will be idle after the interval (seconds) configured here.
palive	It means to enable PING to keep alive.
	-1 - disable the function.
	1,2,3,4 - Enable the function and PING IP 1.2.3.4 to keep alive.
For Dial-Out Settings	
ctype	It means "Type of Server I am calling".
- 51	"ctype=t" means PPTP.
	"ctype=s" means IPSec.
	"ctype= I" means L2TP(IPSec Policy None).
	"ctype= l1" means L2TP(IPSec Policy Nice to Have).
	"ctype= 12" means L2TP(IPSec Policy Must).
dialto	It means Server IP/Host Name for VPN. (such as draytek.com or
diario	123.45.67.89).
Itype	It means Link Type.
•	"ltype=0" means "Disable".
	"ltype=1" means "64kbps".
	"ltype=2" means "128kbps".
	"ltype=3" means "BOD".
oname	It means Dial-Out Username.
oname	"oname=admin" means to set Username = admin.
opwd	It means Dial-Out Password
	"opwd=1234" means to set Password = 1234.
pauth	It means PPP Authentication.
	"pauth=pc" means to set PPP Authentication = PAP&CHAP.
	"pauth=p" means to set PPP Authentication = PAP Only
ovj	It means VJ Compression.
	"ovj=on/off" means to enable/disable VJ Compression.
okey	It means IKE Pre-Shared Key.
UNCY	"okey=abcd" means to set IKE Pre-Shared Key = abcd.
ometh	It means IPSec Security Method.
	"ometh=ah/" means AH.
	"ometh=espd/espda/" means ESP DES without/with
	Authentication.
	"ometh=esp3/esp3a/" means ESP 3DES without/with

	Authentication.
	"ometh=espa/espaa" means ESP AES without/with Authentication.
sch	It means Index(1-15) in Schedule Setup.
	sch=1,3,5,7 Set schedule 1->3->5->7
rcallb	It means Require Remote to Callback.
	"rcallb=on/off" means to enable/disable Set Require Remote to
	Callback.
ikeid	It means IKE Local ID.
	"ikeid=vigor" means Set Local ID = vigor.
For Dial-In Settings	
itype	It means Allowed Dial-In Type. Available settings include:
	"itype=t" means PPTP.
	"itype=s" means IPSec.
	"itype=L1"means L2TP (None).
	"itype=L1" means L2TP(Nice to Have).
	"itype=I2" means L2TP(Must).
peer	It means specify Peer VPN Server IP for Remote VPN Gateway.
	Type "203.12.23.48" means to allow VPN dial-in with IP address of
	203.12.23.48.
	Type "off" means any remote IP is allowed to dial in.
peerid	It means the peer ID for Remote VPN Gateway.
	Type "draytek" means the word is used as local ID.
iname	It means Dial-in Username.
	"iname=admin" means to set username as "admin".
ipwd	It means Dial-in Password.
	"ipwd=1234" means to set password as "1234".
ivj	It means VJ Compression.
	"ivj=on/off" means to enable /disable VJ Compression.
ikey	It means IKE Pre-Shared Key.
,	"ikey=abcd" means to set IKE Pre-Shared Key = abcd.
imeth	It means IPSec Security Method
moti	"imeth=h" means "Allow AH".
	"imeth=d" means "Allow DES".
	"imeth=3" means "Allow 3DES".
	"imeth=a" means "Allow AES.
For TCP/IP Settings	
mywip	It means My WAN IP.
,	"mywip=1.2.3.4" means to set My WAN IP as "1.2.3.4".
rain	It means Remote Gateway IP.
rgip	"rgip=1.2.3.4" means to set Remote Gateway IP as "1.2.3.4".
ma to	
rnip	It means Remote Network IP.
	"rnip=1.2.3.0" means to set Remote Network IP as "1.2.3.0".
rnmask	It means Remote Network Mask.
	"rnmask=255.255.255.0" means to set Remote Network Mask as "255.255.255.0".
rip	It means RIP Direction.
	"rip=d" means to set RIP Direction as "Disable".
	"rip=t" means to set RIP Direction as "TX".

	"rip=r" means to set RIP Direction as "RX". "rip=b" means to set RIP Direction as "Both".
mode	It means the option of "From first subnet to remote network, you have to do". "mode=r" means to set Route mode. "mode=n" means to set NAT mode.
droute	It means to Change default route to this VPN tunnel (Only single WAN supports this). droute=on/off means to enable/disable the function.

```
> vpn option 1 idle=250
% Change Log..
% Idle Timeout = 250
>
```

Telnet Command: vpn mroute

This command allows users to list, add or delete static routes for a certain LAN to LAN VPN profile.

Syntax

```
vpn mroute <index> list
vpn mroute <index> add <network ip>/<mask>
vpn mroute <index> del <network ip>/<mask>
```

Syntax Description

Parameter	Description
list	It means to display all of the route settings.
add	It means to add a new route.
del	It means to delete specified route.
<index></index>	It means the index number of the profile. Available index numbers: 1 ~ 32
<network ip="">/<mask></mask></network>	Enter the IP address with the network mask address.

```
> vpn mroute 1 add 192.168.5.0/24
% 192.168.5.0/24
% Add new route 192.168.5.0/24 to profile 1
```

Telnet Command: vpn list

This command allows users to view LAN to LAN VPN profiles.

Syntax

vpn list <index> all
vpn list <index> com
vpn list<index> out
vpn list <index> in
vpn list<index> net

Syntax Description

Parameter	Description
all	It means to list configuration of the specified profile.
com	It means to list common settings of the specified profile.
out	It means to list dial-out settings of the specified profile.
in	It means to list dial-in settings of the specified profile.
net	It means to list Network Settings of the specified profile.
<index></index>	It means the index number of the profile. Available index numbers: 1 ~ 32

```
> vpn list 32 all

```

Telnet Command: vpn remote

This command allows users to enable or disable PPTP/IPSec/L2TP VPN service.

Syntax

vpn remote <PPTP/IPsec/L2TP/SSLVPN> <on/off>

Syntax Description

Parameter	Description
<pptp ipsec="" l2tp="" sslvpn=""></pptp>	There are four types to be selected.
<on off=""></on>	on - enable VPN remote setting.
	off - disable VPN remote setting.

Example

```
> vpn remote PPTP on
Set PPTP VPN Service : On
Please restart the router!!
```

Telnet Command: vpn NetBios

This command allows users to enable or disable NetBios for Remote Access User Accounts or LAN-to-LAN Profile.

Syntax

vpn NetBios set <H2I/L2I> <index> <Block/Pass>

Parameter	Description
<h2i l2i=""></h2i>	H2l means Remote Access User Accounts.

	L2l means LAN-to-LAN Profile. Specify which one will be applied by NetBios.
<index></index>	The index number of the profile.
<block pass=""></block>	Pass - Have an inquiry for data transmission between the hosts located on both sides of VPN Tunnel while connecting.
	Block - When there is conflict occurred between the hosts on both sides of VPN Tunnel in connecting, set it block data transmission of Netbios Naming Packet inside the tunnel.

```
> vpn NetBios set H2l 1 Pass
% Remote Dial In Profile Index [1] :
% NetBios Block/Pass: [PASS]
```

Telnet Command: vpn mss

This command allows users to configure the maximum segment size (MSS) for different TCP types.

Syntax

vpn mss show

vpn mss default

vpn mss set <connection type> <TCP maximum segment size range>

Syntax Description

Parameter	Description
show	It means to display current setting status.
default	TCP maximum segment size for all the VPN connection will be set as 1360 bytes.
set	Use it to specify the connection type and value of MSS.
<connection type=""></connection>	1-4 represent various type. 1 - PPTP 2 - L2TP 3 - IPSec 4 - L2TP over IPSec 5 - SSL Tunnel
<tcp maximum="" range="" segment="" size=""></tcp>	Each type has different segment size range. PPTP - 1 ~ 1412 L2TP - 1 ~ 1408 IPSec - 1 ~ 1381 L2TP over IPSec - 1 ~ 1361 SSL Tunnel - 1 ~ 1360

```
> vpn mss set 1 1400
% VPN TCP maximum segment size (MSS) :
    PPTP = 1400
    L2TP = 1360
```

```
IPsec = 1360
L2TP over IPsec = 1360
SSL Tunnel = 1260
> vpn mss show
% VPN TCP maximum segment size (MSS) :
    PPTP = 1400
L2TP = 1360
IPsec = 1360
L2TP over IPsec = 1360
SSL Tunnel = 1260
>
```

Telnet Command: vpn ike

This command is used to display IKE memory status and leakage list.

Syntax

vpn ike -q

vpn ike -s

Example

```
> vpn ike -q
IKE Memory Status and Leakage List

# of free L-Buffer=95, minimum=94, leak=1
# of free M-Buffer=529, minimum=529 leak=3
# of free S-Buffer=1199, minimum=1198, leak=1
# of free Msgid-Buffer=1024, minimum=1024
```

Telnet Command: vpn Multicast

This command allows users to pass or block the multi-cast packet via VPN.

Syntax

vpn Multicast set <H2L/L2L> <index> <Block/Pass>

Syntax Description

Parameter	Description
<h2l l2l=""></h2l>	H2L means Host to LAN (Remote Access User Accounts). L2L means LAN-to-LAN Profile.
<index></index>	The index number of the profile.
<block pass=""></block>	Set Block/Pass the Multicast Packets. The default is Block.

```
> vpn Multicast set L2L 1 Pass
% Lan to Lan Profile Index [1]:
% Status Block/Pass: [PASS]
```

Telnet Command: vpn pass2nd

This command allows users to determine if the packets coming from the second subnet passing through current used VPN tunnel.

Syntax

vpn pass2nd <on/off>

Syntax Description

Parameter	Description
<on off=""></on>	on - the packets can pass through NAT.
	off - the packets cannot pass through NAT.

Example

```
> vpn pass2nd on
% 2nd subnet is allowed to pass VPN tunnel!
```

Telnet Command: vpn pass2nat

This command allows users to determine if the packets passing through by NAT or not when the VPN tunnel disconnects.

Syntax

vpn pass2nat <on/off>

Syntax Description

Parameter	Description
<on off=""></on>	on - the packets can pass through NAT.
	off - the packets cannot pass through NAT.

Example

```
> vpn pass2nat on % Packets would go through by NAT when VPN disconnect!!
```

Telnet Command: vpn passAPM

This command is used for configuring the APM broadcast allowed to pass the VPN tunnel.

Syntax

vpn passAPM < on/off>

Syntax Description

Parameter	Description
<on off=""></on>	on - the packets can pass through NAT.
	off - the packets cannot pass through NAT.

Example

```
> vpn passAPM on
% APM broadcast is allowed to pass VPN tunnel!
>
```

Telnet Command: vpn sameSubnet

This command allows users to build VPN between clients via virtual subnet.

Syntax

```
vpn sameSubnet -i <value>
vpn sameSubnet -E <0/1>
vpn sameSubnet -e <value>
vpn sameSubnet -I <Virtual Subnet>
vpn sameSubnet -o <add/del>
vpn sameSubnet -v
vpn sameSubnet -w
```

Syntax Description

Parameter	Description
-i <value></value>	Specify the index number of VPN profile.
-E <0/1>	Enable or disable the IPsec with the same subnet. 1 - enable.
	0 - disable.
-e <value></value>	Translate specified LAN to virtual subnet. 1 - LAN1 2 - LAN2 3 - LAN3
-I <virtual subnet=""></virtual>	Set the virtual subnet (e.g., 172.16.3.250).
-o <add del=""></add>	Set the operation.
-V	Display current status of virtual subnet.
-m <1/2>	Set the translated type. <1/2>: Enter a number. 1 means the Whole Subnet; 2 means Specific IP.

```
> vpn sameS -i 1 -e 1 -E 1 -e 1 -I 10.10.10.0 -o add
Enable IPsec with Same Subnet !!

Add entry Succcess!!
> vpn sameS -v
IPsec with the same subnet:
VPN profile 1 enable,
Whole Subnet:
    translated LAN1 to Virtual subnet: 10.10.10.0
```

Telnet Command: vpn ovpn

This command allows users to build VPN between clients via OpenVPN.

Syntax

```
vpn ovpn mode <0/1>
vpn ovpn show
vpn ovpn udp_mode <0/1>
vpn ovpn tcp_mode <0/1>
vpn ovpn udp_port <1-65535>
vpn ovpn tcp_port <1-65535>
vpn ovpn cert <0/1>
vpn ovpn replay <0/1>
vpn ovpn certmode <0/1/2>
vpn ovpn tade <0/1/2>
vpn ovpn tade <0/1/2/3>
vpn ovpn tlsauth_del <1/2/3>
```

Parameter	Description
mode <0/1>	Enable or disable the OpenVPN function.
	1 - enable.
	0 - disable.
show	Displays current OpenVPN settings.
udp_mode <0/1>	Enable or disable the UDP mode.
	1 - enable.
	0 - disable.
tcp_mode <0/1>	Enable or disable the TCP mode.
	1 - enable.
	0 - disable.
<i>udp_port</i> <1-65535>	Enter a port number (1-65535) for UDP mode.
tcp_port <1-65535>	Enter a port number (1-65535) for TCP mode.
replay <0/1>	Enable or disable the replay option.
	1 - enable.
	0 - disable.
certmode <0/1/2>	Set the Cipher Algorithm Mode.
	0:AES128, 1:AES256, 2:None
hmacmode <0/1/2>	Set the Cipher HMAC Mode.
	0:SHA1, 1:SHA256, 2:None

```
> vpn ovpn mode 1
Enable openvpn
> vpn ovpn show

Openvpn: Enable
support UDP: Enable
UDP port: 1194
support TCP: Enable
TCP port: 1194
Use certificate authentication: Enable
replay option: Enable
Cipher Algorithm: AES256
HMAC Algorithm: SHA256
Certificate uid: 65535
Trust CA uid: 13
```

Telnet Command: wan ppp_mru

This command allows users to adjust the size of PPP LCP MRU. It is used for specific network.

Syntax

wan ppp_mru <WAN interface number> <MRU size >

Syntax Description

Parameter	Description
<wan interface="" number=""></wan>	Type a number to represent the physical interface. For Vigor130, the number is 1 (which means WAN1).
<mru size=""></mru>	It means the number of PPP LCP MRU. The available range is from 1400 to 1600.

Example

```
>wan ppp_mru 1 ?
% Now: 1492

> wan ppp_mru 1 1490

> wan ppp_mru 1 ?
% Now: 1490

> wan ppp_mru 1 1492

> wan ppp_mru 1 ?
% Now: 1492
```

Telnet Command: wan mtu

This command allows users to adjust the size of MTU for WAN.

Syntax

wan mtu <value>

Syntax Description

Parameter	Description
<value></value>	It means the number of MTU for PPP. The available range is from 1000 to 1500.
	For Static IP/DHCP, the maximum number will be 1500.
	For PPPoE, the maximum number will be 1492.
	For PPTP/L2TP, the maximum number will be 1460.

Example

```
> wan mtu 1100

> wan mtu ?

Static IP/DHCP (Max MSS: 1500)

PPPoE(Max MSS: 1492)

PPTP/L2TP(Max MSS: 1460)

% wan ppp_mss <MSS size: 1000 ~ 1500>

% Now: 1100
```

Telnet Command: wan dns

This command allows users to configure primary and / or secondary DNS server.

Syntax

wan dns <wan_no> <dns_select> <ipv4_addr>

Syntax Description

Parameter	Description
<wan_no></wan_no>	Select WAN interface. 1 - WAN1
<dns_select></dns_select>	Specify primary and / or secondary DNS server. pri - It means primary DNS server. sec - It means secondary DNS server.
<ipv4_addr></ipv4_addr>	Enter the IP address of DNS server.

Example

```
> wan dns 1 pri 168.95.1.1
% Set WAN1 primary DNS done.
% Now: 168.95.1.1
```

Telnet Command: wan DF_check

This command allows you to enable or disable the function of DF (Don't fragment)

Syntax

wan DF_check <on/off>

Syntax Description

Parameter	Description
<on off=""></on>	It means to enable or disable DF.

Example

```
> wan DF_check on
%DF bit check enable!
> wan DF_check off
%DF bit check disable (reset DF bit)!
```

Telnet Command: wan disable

This command allows you to disable WAN connection.

Example

```
> wan disable WAN
%WAN disabled.
```

Telnet Command: wan enable

This command allows you to disable wan connection.

Example

```
> wan enable WAN %WAN1 enabled.
```

Telnet Command: wan forward

This command allows you to enable or disable the function of WAN forwarding. The packets are allowed to be transmitted between different WANs.

Syntax

wan forward <on/off>

Syntax Description

Parameter	Description
<on off=""></on>	It means to enable or disable WAN forward.

```
> wan forward ?
%WAN forwarding is Disable!
```

```
> wan forward on %WAN forwarding is enable!
```

Telnet Command: wan status

This command allows you to display the status of WAN connection, including connection mode, TX/RX packets, DNS settings and IP address.

Example

```
> wan status
WAN1: Offline, stall=N
Mode: ---, Up Time=00:00:00
IP=---, GW IP=---
TX Packets=0, TX Rate(bps)=0, RX Packets=0, RX Rate(bps)=0
Primary DNS=0.0.0.0, Secondary DNS=0.0.0.0
PVC_WAN3: Offline, stall=N
Mode: ---, Up Time=00:00:00
IP=---, GW IP=---
TX Packets=0, TX Rate(bps)=0, RX Packets=0, RX Rate(bps)=0
Primary DNS=0.0.0.0, Secondary DNS=0.0.0.0
PVC_WAN4: Offline, stall=N
Mode: ---, Up Time=00:00:00
IP=---, GW IP=---
TX Packets=0, TX Rate(bps)=0, RX Packets=0, RX Rate(bps)=0
PVC_WAN5: Offline, stall=N
Mode: ---, Up Time=00:00:00
IP=---, GW IP=---
TX Packets=0, TX Rate(bps)=0, RX Packets=0, RX Rate(bps)=0
PVC_WAN6: Offline, stall=N
Mode: ---, Up Time=00:00:00
IP=---, GW IP=---
TX Packets=0, TX Rate(bps)=0, RX Packets=0, RX Rate(bps)=0 TX Packets=0, TX
Rate(Bps)=0, RX Packets=0, RX Rate(Bps)=0
--- MORE ---
             ['q': Quit, 'Enter': New Lines, 'Space Bar': Next Page] ---
```

Telnet Command: wan modem

This command, wan modem, allows you to configure 3G/4G USB Modem (PPP mode) of WAN3.

Syntax

```
wan modem <init/dial/pin> <string>
wan modem dial <string>
wan modem pin <1/0>
wan modem paponly <on/off>
```

wan modem backup_wait <value>
wan modem pipe <Int><Din><Dout> (for USB WAN3 only)
wan modem wakeup <on/off/value> (for USB WAN3 only)
wan modem status

Syntax Description

Parameter	Description
init	Set initial modem AT command (default value is "AT&FE0V1X1&D2&C1S0=0").
dial <string></string>	Set dial modem AT command. <string>: Enter a string. (default value is "ATDT*99#").</string>
pin <0>	Set PIN code for SIM card. "0":disable
paponly <on off=""></on>	It means PAP Only. Set the PPP authentication of the USB WAN. on: None. off: PAP or CHAP.
backup_wait <value></value>	Set waiting time after boot if USB WAN is in backup mode. This waiting time is reserved for the dial of main WANs so that the backup USB WAN will not go up first. Available setting is from 1 to 255. Unit is second.
pipe	It is for RD debug only. Please don't use it without our advice.
wakeup [on/off]	It is for RD debug only. Please don't use it without our advice.
status	Display current status of USB modem.

Example

- > wan modem pin 0
- > wan modem status

Modem Link Speed=0

Current Signal Strength=0

Last Fail Message:

Current Connect Stage:

Telnet Command: wan Ite

This command allows you to configure LTE WAN (for L model only).

Syntax

wan Ite auth <0/1>
wan Ite band
wan Ite del <index #/all>
wan Ite pass <string>
wan Ite quota [-<command><parameter>|...|
wan Ite read <index #/all>
wan Ite reboot [-<command><parameter>|...|
wan Ite reply [-<command><parameter>|...|
wan Ite send <number><message>
wan Ite stus
wan Ite tag <index #/all>
wan Ite user <string>
wan Ite wms send <cdma/gwpp> / recv <cdma/gwgw>
wan Ite wms setting

Parameter	Description
auth <0/1>	Set PPP authentication of LTE WAN. 0: None. 1: PAP or CHAP.
band	Display working band information for LTE network connection.
del <index #="" all=""></index>	Delete an SMS from the LTE SIM card by specifying the index number. Use "all" to delete all.
pass <string></string>	Set the password of LTE WAN.
quota [- <command/> <parameter>l]</parameter>	Set settings of SMS Quota Limit function. Available commands with parameter are listed below: [] means that you can Enter several commands in one line. -a <0/1>: Set whether to send an e-mail alert when SMS quota exceeded. (0: no 1: yes) -c <cycle>: Set the order of today in refresh cycle. -d <day>: Set the refresh day. -e <0/1>: Enable or disable SMS Quota Limit function. (0: disable 1:</day></cycle>
	enable) -h <hour>: Set the refresh hourm <0/1/2>: Set SMS quota refresh mode. (0: None 1: monthly 2: periodically) -n <number>: Set SMS quota. The avaible number is between 1 and 1000000.</number></hour>
	-s <0/1>: Set whether to stop sending SMS after SMS quota exceeded. (0: no 1: yes)
read < index #/all>	Display information of an SMS in the LTE SIM card by specifying the index number. Use "all" to display all.

reboot	Set settings of Reboot on SMS Message function.
	<command/> <parameter> </parameter>
	The available commands with parameters are listed below.
	[] means that you can Enter several commands in one line.
	-a <0/1>: Enable or disable Access Control List. (0: disable 1: enable)
	-e <0/1>: Enable or disable Reboot on SMS Message function. (0: disable 1: enable)
	-p <password>: Set the Password / PIN. This setting is necessary if this function is enabled.</password>
	-x <number>: Set the first phone number in Access Control List.</number>
	-y <number>: Set the second phone number in Access Control List</number>
	-z <number>: Set the third phone number in Access Control List.</number>
reply	Set settings of Reply with Router Status Message function.
	<command/> <parameter> </parameter>
	The available commands with parameters are listed below.
	[] means that you can Enter several commands in one line.
	-a <0/1>: Enable or disable Access Control List. (0: disable 1: enable)
	-c <0/1>: Set whether to reply with MAC address. (0: no 1: yes)
	-e <0/1>: Enable or disable Reboot on SMS Message function. (0: disable 1: enable)
	-f <0/1>: Set whether to reply with WAN1 IP address. (0: no 1: yes
	-g <0/1>: Set whether to reply with WAN2 IP address. (0: no 1: ye
	-h <0/1>: Set whether to reply with LTE WAN IP address. (0: no 1: yes)
	-i <0/1>: Set whether to reply with WAN4 IP address. (0: no 1: yes
	-j <0/1>: Set whether to reply with WAN1 data usage. (0: no 1: ye
	-k <0/1>: Set whether to reply with WAN2 data usage. (0: no 1: ye
	-l <0/1>: Set whether to reply with LTE WAN data usage. (0: no 1: yes)
	-m <0/1>: Set whether to reply with WAN4 data usage. (0: no 1: ye
	-n <0/1>: Set whether to reply with Router name. (0: no 1: yes)
	 -p <password>: Set the Password / PIN. This setting is necessary i this function is enabled.</password>
	-u <0/1>: Set whether to reply with Router system uptime. (0: no yes)
	-v <0/1>: Set whether to reply with Router firmware version. (0: r 1: yes)
	-x <number>: Set the first phone number in Access Control List.</number>
	-y <number>: Set the second phone number in Access Control List</number>
	-z <number>: Set the third phone number in Access Control List.</number>
send <number><message></message></number>	Send an SMS message to the specified phone number through the LTE SIM card.
stus	Display status of LTE connection.
tag <index #="" all=""></index>	Set an SMS in the LTE SIM card as read state by specifying the indenumber. Use "all" to set all SMS as read state.
user <string></string>	Set the UserName of LTE WAN.
wms send <cdma gwpp="">/ wms recv <cdma gwgw=""> wms setting</cdma></cdma>	This command is for RD debug only. We use it to test new USB modems. Please don't use it without our advice.

```
> wan lte band
Access technology : LTE
Access band information : E-UTRA Op Band 3
Interfere with 2.4G WLAN : NO
Active channel: 1725
>wan lte stus
Status: Operational. (Online)
Access Tech: LTE
Band: E-UTRA Op Band 3
ISP: Chunghwa
MCC: 466, MNC: 92, LAC: 65534, Cell ID: 81023501
Max Channel TX Rate: 50000000 bps
Max Channel RX Rate: 100000000 bps
IMEI: 356318040749422
IMSI: 466924200859808
RSSI: -61 dBm
Unread SMS: 4
SMSC address: +886932400821
SMS service status : Ready
Number of SMS sent : 0
```

Telnet Command: wan detect

This command allows you to configure WAN connection detection. When Ping Detection is enabled (for Static IP or DHCP or PPPoE mode), Router pings specified IP addresses to detect the WAN connection.

Syntax

```
wan detect <wan1> <on/off/strict/always_on>
wan detect <wan1> <on/off> -t <time>
wan detect <wan1> <on/off> -i <interval>
wan detect <wan1> target <ip addr>
wan detect <wan1> target2 <ip addr>
wan detect <wan1> target_gw <1/0>
wan detect <wan1> target_gw <1/0>
wan detect <wan1> til <value>
wan detect <wan1> interval <interval>
wan detect <wan1> retry <retry>
wan detect status
```

Parameter	Description
<on always_on="" off="" strict=""></on>	On: Enable ping detection. The IP address of the target shall be set. Off: Enable ARP detection (default). Time and interval should be set. strict: Enable the strict ARP detection. Time and interval should be set. always_on: Disable link detect, always connected(only support static IP)

-t <time></time>	Set the time for ARP detect or strict ARP detection.
-i <interval></interval>	Set the interval for ARP detect or strict ARP detection.
target <ip addr=""></ip>	Set the ping target. <ip addr="">: It means the IP address used for detection. Type an IP address (e.g., 192.168.1.10) in this field.</ip>
target2 <ip addr=""></ip>	Set the secondary ping target. <ip addr="">: It means the IP address used for detection. Type an IP address (e.g., 192.168.1.10) in this field.</ip>
target_gw <1/0>	Set whether to use gateway as ping target. 1: yes 0: no Note that USB WAN (PPP mode) cannot support PING gateway
ttl <1-255>	It means to set the ping TTL value (work as trace route) If you do not set any value for ttl here or just type 0 here, the system will use default setting (255) as the ttl value.
interval <interval></interval>	Set the interval between each ping operation. Available setting is between 1 and 3600. The unit is second. <interval>: Type a value.</interval>
retry <retry></retry>	Set how many ping operations are retried before the Router judges that the WAN connection is disconnected. Available setting is between 1 and 255. The unit is times. <retry>: Type a number.</retry>
status	It means to show the current status.

```
> wan detect status
WAN1: arp detect, send time=30, Interval = 5
WAN2: arp detect, send time=30, Interval = 5
WAN3: arp detect, send time=30, Interval = 5
WAN4: arp detect, send time=30, Interval = 5
WAN5: arp detect, send time=30, Interval = 5
WAN6: arp detect, send time=30, Interval = 5
> wan detect wan1 target 192.168.1.78
Set OK
> wan detect wan1 on
Set OK
> wan detect status
WAN1: ping detect, Target=192.168.1.78, TTL=255, Target2=0.0.0.0,
TargetGW=off,
Interval=1, Retry=10
WAN2: arp detect, send time=30, Interval = 5
WAN3: arp detect, send time=30, Interval = 5
WAN4: arp detect, send time=30, Interval = 5
WAN5: arp detect, send time=30, Interval = 5
WAN6: arp detect, send time=30, Interval = 5
```

Telnet Command: wan mylan

This command allows you to configure multi-VLAN for WAN and LAN. It supports pure bridge mode (modem mode) between Ethernet WAN and LAN port 2~4.

Syntax

wan mvlan <pvc_no/status/save/enable/disable> <on/off/clear/tag tag_no> <service
type/vlan priority> <px ... >

wan mvlan keeptag <pvc_no> <on/off>

Syntax Description

Parameter	Description
pvc_no	It means index number of PVC. There are 10 PVC, 0(Channel-1) to 9(Channel-9) allowed to be configured.
	However, bridge mode can be set on PVC number 2 to 9.
status	It means to display the whole Bridge status.
save	It means to save the configuration into flash of Vigor router.
enable/disable	It means to enable/disable the Multi-VLAN function.
on/off	It means to turn on/off bridge mode for the specific channel.
clear	It means to turn off/clear the port.
tag tag_no	It means to tag a number for the VLAN.
	-1: No need to add tag number.
	1-4095: Available setting numbers used as tagged number.
service type	It means to specify the service type for VLAN.
	0: Normal.
	1: IGMP.
vlan priority	It means to specify the priority for the VALN setting.
-	Range is from 0 to 7.
рх	It means LAN port. Available setting number is from 2 to 4. Port number 1 is locked for NAT usage.
keeptag	It means Multi-VLAN packets will keep their VLAN headers to LAN.

Example

PVC 7 will map to LAN port 2/3/4 in bridge mode; service type is Normal. No tag added.

Telnet Command: wan multifno

This command allows you to specify a channel (in Multi-PVC/VLAN) to make bridge connection to a specified WAN interface.

Syntax

wan multifno *<channel #> <WAN interface #>*wan multifno *status*

Syntax Description

Parameter	Description
<channel #=""></channel>	There are several channels for bridge connection. Available settings are: 4=Channel 4 5=Channel 5
	 10=Channel 10
<wan #="" interface=""></wan>	Type a number to indicate the WAN interface. $1=WAN1$
status	It means to display current bridge status.

Example

```
> wan multifno 5 1
% Configured channel 5 uplink to WAN1
> wan multifno status
% Channel 4 uplink ifno: 3
% Channel 5 uplink ifno: 3
% Channel 6 uplink ifno: 3
% Channel 7 uplink ifno: 3
% Channel 8 uplink ifno: 3
% Channel 9 uplink ifno: 3
> Channel 9 uplink ifno: 3
```

Telnet Command: wan vlan

This command allows you to configure the VLAN tag of WAN1 or WAN2.

Syntax

wan vlan wan <#> tag <value>
wan vlan wan <#> <enable/disable>
wan vlan stat

Parameter	Description
wan <#>	Specify which WAN interface will be tagged.
tag <value></value>	Type a number for tagging on WAN interface.
<enable disable=""></enable>	Enable: Specified WAN interface will be tagged. Disable: Disable the function of tagging on WAN interface.

stat	Display current VLAN status.

Telnet Command: wan phyvlan

This command is used to set VLAN tag insertion for outer tag (service) for WAN interface. WAN interfaces must be configured first before setting VLAN encapsulation.

Syntax

```
wan phyvlan wan <#> tag < value> wan phyvlan wan <#> pri < value> wan phyvlan wan <#> <enable/disable> wan phyvlan stat
```

Syntax Description

Parameter	Description
<#>	It means WAN interface.
	1 - WAN1
	2 - WAN2
tag <value></value>	It means to tag a value (1 to 4095) onto the selected WAN interface.
pri <value></value>	It means to set value (0 to 7) for priority for such VLAN tag.
<enable disable=""></enable>	It means to enable / disable the VLAN tag.
stat	Display the setting status.

Telnet Command: wan budget

This command allows you determine the data *traffic volume* for each WAN interface respectively to prevent from overcharges for data transmission by the ISP.

Syntax

wan budget wan <#> rdate <day><hour>
wan budget wan <#> <enable|disable>
wan budget wan <#> thres <budget limit (MB)>
wan budget wan <#> gthres <budget limit (GB)>
wan budget wan <#> mode <monthly|periodic|none>
wan budget wan <#> psday
wan budget wan <#> custom_mode <0/1>
wan budget wan <#> custom_mode_reset_hour <hour>
wan budget wan <#> action <action bitmap>
wan budget status

Parameter	Description
wan <#> rdate <day><hour></hour></day>	wan <#>: Specify the WAN interface.
	rdate <day><hour>: Specify the WAN budget refresh time.</hour></day>
	day - Available settings are from 1 to 30.
	hour - Available settings are from 1 to 23.
	E.g., wan budget wan 1 rdate 5 10
	If monthy mode is selected: WAN budget will be refreshed on 5th day at 10:00 in each month.
	If periodic mode is selected: WAN budget will be refreshed every 5 days and 10 hours.
<enable disable></enable disable>	enable - Enable the function of wan budget.
	disable - Disable the function of wan budget.
thres <budget (mb)="" limit=""></budget>	Specify the maximum value for WAN budget limit. (Unit: MB)
	budget limit - Type a number.
gthres <budget (gb)="" limit=""></budget>	Specify the maximum value of wan budget limit. (Unit: GB)
	budget limit - Type a number.
mode <monthly none="" periodic=""></monthly>	Specify the calculation mode (monthly, periodically, or none) for WAN budget.
psday	It is used only when mode is set with "periodic". Specify the order of "today" in the cycle.
	E.g., wan budget wan 5 psday \rightarrow It means "today" is the 5 th day in the billing cycle.
custom_mode <0/1>	Set the custom mode (cycle in hours or in days).
	0: cycle_in_hours
	1: cycle_in_days
custom_mode_reset_hour	Set the reset hour value.
<hour></hour>	hour: Enter 1 to 23.
action <action bitmap=""></action>	Determine the action to be performed when it reaches the WAN budget limit.
	action bitmap - Type a total number of actions to be executed. Different numbers represent different actions.
	1: shotdown wan

	2: send mail alert 4: send sms alert For example, if you type "5" (5=1+4), the system will send SMS alert when WAN shotdown is detected.
-4-4:	
status	Display current configuration status of WAN budget.

```
> wan budget wan 1 action 5
% WAN 1 budget action set to 5
> wan budget wan 1 gthres 10
% WAN 1 budget limit set to 10 GB
> wan budget status
% WAN1 budget configuration:
% Status = Disabled
% Mode = No Refreshing
% Action = Shutdown WAN Send SMS
% Budget Limit = 10 GB
% WAN2 budget configuration:
% Status = Disabled
% Mode = No Refreshing
% Action = None
% Budget Limit = 0 MB
% WAN3 budget configuration:
% Status = Disabled
% Mode = No Refreshing
% Action = None
% Budget Limit = 0 MB
```

Telnet Command: wan detect_mtu

This command allows you to run a WAN MTU Discovery. The user can specify an IPv4 target to ping and find the suitable MTU size of the WAN interface.

Syntax

wan detect_mtu -i <Host/IP address> -s <mtu_size> -d <decrease size> -w <#> -c <count>

Syntax Description

Parameter	Description
-I <host address="" ip=""></host>	Specify the IPv4 target to detect. If can be an IPv4 address or domain name.
	Host/IP address: Enter the IP address/domain name of the target.
-s <mtu_size></mtu_size>	Set the MTU size base for Discovery.
	mtu_size: Available setting is 1000 ~ 1500.
-d <decrease size=""></decrease>	Set the MTU size to decrease between detections.
	decrease size: Available setting is 1 ~ 100.
-c <count></count>	Set the maximum times of ping failure during a Discovery. count: Available settings are 1 ~ 10. Default value is 3.

```
> wan detect_mtu -w 2 -i 8.8.8.8 -s 1500 -d 30 -c 10
detecting mtu size:1500!!!
mtu size:1470!!!
```

Telnet Command: wan detect_mtu6

This command allows you to run a WAN MTU Discovery. The user can specify an IPv6 target to ping and find the suitable MTU size of the WAN interface.

Syntax

wan detect_mtu6 -i <Host/IP address> -s <mtu_size> -w <#>

Syntax Description

Parameter	Description
-I <host address="" ip=""></host>	Specify the IPv6 target to detect. It must be an IPv6 IP address. IPv6 address: Enter the IPv6 address of the target.
-s <mtu_size></mtu_size>	Specify the size of MTU. mtu_size: Available setting is 1280 ~ 1500.
-W <#>	Specify the WAN interface. number: Enter the number of WAN interface. 1: WAN1.

Example

```
> wan detect_mtu6 -w 1 -i 2404:6800:4008:c06::5e -s 1500
>
```

Telnet Command: wan failover

This command is used to configure failover WAN.

Syntax

wan failover off *<index>*wan failover on *<1><2><3><4><5><6>*wan failover show *<index>*

Parameter	Description
failover off <index></index>	Set specified WAN interface to always on. index - Ranges from 1 to 3.
failover on <1><2><3><4><5><6>	There are six fields which represent different options. Field 1 - Specify WAN interface as failover WAN by typing 1 to 3. Field 2 - Enable / disable the action for the failover WAN. Such action is "Active When selected WAN [disconnect/reached traffic threshold]". 0 - Disable

	1 - Enable
	Field 3 - Enable / disable the action for the failover WAN. Such action is "Active When [any/all] of selected WAN disconnect or reached traffic threshold".
	0 - Disable
	1 - Enable
	Field 4 - Specify main WAN by typing 1 to 3. The main WAN will be set to always on.
	Field 5 - Specify traffic threshold [Download threshold(Kbps)].
	Field 6 - Specify traffic threshold [Upload threshold (Kbps)].
	For example, WAN 2 will be set as failover, and will be active when any of selected WANs has reached traffic threshold. WAN 3 is the selected WAN. Download threshold: 50 Kbpsl; Upload threshold: 20 Kbps. You can type as follows:
	wan failover on 2 1 0 3 50 20
show <index></index>	Display parameters settings for WAN interface.
	index - Ranges from 1 to 4.

```
> wan failover on 2 1 0 3 50 20
> wan failover show 2
  wan2 Active Mode : Failover
        Active when : Any of the selected WANs reached the Traffic Threshold
        Traffic Download Threshold : 50 Kbps
        Traffic Upload Threshold : 20 Kbps
>
```

Telnet Command: hsportal

This command is used to configure a profile (Hotspot Web Portal) with specified URL for accessing into or display a message when a wireless/LAN user connects to Internet through this router.

Syntax

hsportal setup -p rofile> [-I <lan>] [-s <ssid>] ...
hsportal setup -p rofile> -c

Parameter	Description
-p <profile></profile>	Indicate available profile to be configured. <pre><pre><pre></pre></pre></pre> <pre><pre>file>: Enter the index number (1 to 4) of the profile.</pre></pre>
-1	Apply to LAN interfaces (1 to 8). For example: hsportal setup -p 1 -l 1, 2 (apply LAN1 and LAN2)
-S	Apply to WLAN interfaces (1 to 4). For example: hsportal setup -p 1 -s 1, 2 (apply SSID1 and SSID2)
-a	Apply to WLAN5G interfaces (1 to 4). For example: hsportal setup -p 1 -a 1, 2 (apply SSID1 and SSID2)
-m	Select login mode. 0: skip 1: click

	2: social
	3: pin
	4: social or pin
	For example: hsportal setup -p 1 -m 0
-f <0/1>	It menas to enable or disable the function of Configure facebook login. 0: disable. 1: enable.
-g <0/1>	It menas to enable or disable the function of Configure google login. 0: disable. 1: enable.
-h <0/1>	It menas to enable or disable the function of HTTPS redirection. 0: disable. 1: enable.
-v <0/1>	It menas to enable or disable the function of portal detection. 0: disable. 1: enable.
-i <string></string>	It means to set APP ID. <string>: Enter a string as APP ID. For example, to configure facebook APP id, you can type: > hsportal set -p 1 -f 1 -i this_is_app_id Profile 1 set facebook login enabled [OK] Profile 1 set API ID [OK]</string>
-k <string></string>	It means to set APP key. <string>: Enter a string as APP key. For example, to configure google APP key, you can type: > hsportal set -p 1 -g 1 -k keyforapp Profile 1 set google login enabled [OK] Profile 1 set API KEY [OK]</string>
-r <0/1/2>	It means to set landing page mode. 0: fixed URL. 1: user request. 2: bulletin. For example, > hsportal set -p 1 -r 0 Profile 1 set landing page mode 0 [OK]
-e	It means to enable the specified profile.
-d	It means to disable the specified profile.
-c <1/2/3/4>	Reset the specified profile. <1/2/3/4>: Enter the index number of profile. For example, > hsportal set -p 1 -c Reset profile 1 [OK]
-0	Clear profiles for all clients.
-t <value></value>	Set the expire time for the specified profile. <value>: Enter a number of time period (unit: minutes). For example, k> hsportal setup -p 1 -t 300 Profile 1 set expire time 300 mins [OK]</value>

```
> hsportal setup -p 1 -c
Reset profile 1 ... [OK]
> hsportal setup -p 1 -r 0
Profile 1 set landing page mode 0 ... [OK]
> hsportal setup -p 2 -g 1 -k app_key_google
Profile 2 set google login enabled ... [OK]
Profile 2 set API KEY ... [OK]
>
```

Telnet Command: hsportal level

This command allows the user to configure bandwidth and sessions quota which is only applicable to the web portal clients.

Syntax

hsportal level -p <index> [-e <enable>] [-t <mins>] ...

Parameter	Description
-p <index></index>	It means to specify (add) a quota policy profile. <index>: Enter the index number (1 to 20) of the quota policy profile.</index>
-e <0/1>	It means to enable or disable the quota policy profile. 0: disable. 1: enable.
-t <value></value>	It means to set expired time for quota policy. <value>: Enter a number (unit:minutes).</value>
-i <0/1> -o <value></value>	It means to enable or disable the function of idle timeout 0: disable. 1: enable. If enabled, -o <value>: Set the idle timeout (unit:minutes) if idle timeout is enabled. For example: hsportal level -p 1 -e 1 -i 1 -o 300</value>
-d <value></value>	It means to set the maximum number of devices that can be connected to the network using the same account. <value>: Enter a number (0 to 100). "0" means unlimited. For example: hsportal level -p 1 -e 1 -d 0</value>
-b <0/1>	It means to enable or disable the function of bandwidth limit. 0: disable. 1: enable.
-ru <0/1>	It means to specify the bandwidth limit download unit. 0: kbps 1: mbps
-tu <0/1>	It means to specify the bandwidth limit upload unit. 0: kbps. 1: mbps.
-s <0/1>	It means to enable or disable the session limit.

	0:disable.
	1:enable.
-n <value></value>	It means to set a maximum session limit.
	<value>: Enter a value (0 to 6000).</value>
	For example: hsportal level -p 1 -s 1 -n
-U <kbps mbps=""></kbps>	It means to specify the bandwidth upload limit.
	kbps
	mbps
-D <kbps mbps=""></kbps>	It means to specify the bandwidth download limit.
	kbps
	mbps
-c <index></index>	It means to delete a quota policy profile.
	<index>: Enter the index number (1 to 20) of the quota policy</index>
	profile.
-r <0/1>	It means to enable or disable the function of reconnection time restriction.
	0:disable.
	1:enable.
-f <value></value>	It means to set a period of time to block the same user reconnecting to the network.
	<value>: Enter a number (1 to 1439 minutes).</value>
	For example: hsportal level -p 1 -e 1 -r 1 -f 300
-g <value></value>	It means to set a reconnection time to block the same user from reconnecting before the set time.
	<pre><value>: Enter the hour (01 to 23) and the minutes (0-59) (unit: minutes).</value></pre>
	For example: hsportal level -p 1 -e 1 -r 1 -f 23:15 (The same user can reconnect after 23:15 every day)

```
> hsportal level -p 1 -e 1 -r 1 -f 30000
>
```

Telnet Command: wl acl

This command allows the user to configure wireless access control settings.

Syntax

wl acl enable <ssid1 ssid2 ssid3 ssid4>

wl acl disable <ssid1 ssid2 ssid3 ssid4>

wl acl add <MAC> <ssid1 ssid2 ssid3 ssid4> <isolate>

wl acl del <MAC>

wl acl mode <ssid1 ssid2 ssid3 ssid4> <white/black>

wl acl show

wl acl showmode

wl acl clean

Parameter	Description
-----------	-------------

enable <ssid1 ssid2="" ssid3<br="">ssid4></ssid1>	It means to enable the settings for SSID1, SSID2, SSID3 and SSID4.
disable <ssid1 ssid2="" ssid3<br="">ssid4></ssid1>	It means to disable the settings for SSID1, SSID2, SSID3 and SSID4.
add <mac> <ssid1 ssid2="" ssid3<br="">ssid4> <isolate></isolate></ssid1></mac>	It means to associate a MAC address to certain SSID interfaces' access control settings. The isolate setting will limit the wireless client's network capabilities to accessing the wireless LAN only.
	[MAC] format: xx-xx-xx-xx-xx
	or xx:xx:xx:xx:xx
	or xx.xx.xx.xx.xx
del <mac></mac>	It means to delete a MAC address entry defined in the access control list.
mode <ssid1 ssid2="" ssid3<br="">ssid4> <white black=""></white></ssid1>	It means to set white/black list for each SSID.
wl acl show	It means to show access control status.
wl acl showmode	It means to show the mode for each SSID.
wl acl clean	It means to clean all access control setting.

```
> wl acl showmode
SSID1: None
SSID2: None
SSID3: None
SSID4: None
> wl acl add 00-50-70-ff-12-70 ssid1 ssid2 isolate
Set Done !!
> wl acl show
-----Mac Address Filter Status-----
SSID1: Disable
SSID2: Disable
SSID3: Disable
SSID4: Disable
-----MAC Address List-----
Index Attribute MAC Address Associated SSIDs
                                                       Comment
                 s: Isolate the station from LAN
```

Telnet Command: wl config

This command allows users to configure general settings and security settings for wireless connection.

Syntax

```
wl config mode <value>
wl config mode show
wl config channel <number>
wl config channel show
wl config preamble <enable>
```

wl config txburst <enable>

wl config ssid <ssid_num enable ssid_name <hidden_ssid>>

wl config security <SSID_NUMBER><mode>

wl config ratectl <ssid_num enable upload download >

wl config isolate <ssid_num lan member>

wl config dtim <value>/ show

wl config beaconperiod <value> / show

wl config radio <1/0>/show

wl config frag <value>/ show

wl config rts <value> / show

wl config rate_alg <value> / show

wl config country <value> / show

Parameter	Description
mode <value></value>	It means to select connection mode for wireless connection. Available settings are: "11bgn", "11gn", "11n", "11bg", "11g", or "11b".
mode show	It means to display what the current wireless mode is.
channel <number></number>	It means the channel of frequency of the wireless LAN. The available settings are 0,1,2,3,4,5,6,7,8,9,10,11,12 and 13. number=0, means Auto number=1, means Channel 1
	 number=13, means Channel 13.
channel show	It means to display what the current channel is.
preamble <enable></enable>	It means to define the length of the sync field in an 802.11 packet. Most modern wireless network uses short preamble with 56 bit sync field instead of long preamble with 128 bit sync field. However, some original 11b wireless network devices only support long preamble.
	0: disable to use long preamble. 1: enable to use long preamble.
preamble show	It means to display if the current preamble is enabled or not.
txburst <enable></enable>	It means to enhance the performance in data transmission about 40%* more (by enabling Tx Burst). It is active only when both sides of Access Point and Station (in wireless client) invoke this function at the same time. 0: disable the function. 1: enable the function.
ssid <ssid_num enable<br="">ssid_name <hidden_ssid>></hidden_ssid></ssid_num>	It means to set the name of the SSID, hide the SSID if required. ssid_num: Type 1, 2, 3 or 4 to specify SSID1, SSID2, SSID3 or SSID4. ssid_name: Give a name for the specified SSID. hidden_ssid: Type 0 to hide the SSID or 1 to display the SSID
security <ssid_number><mode><key ><index></index></key </mode></ssid_number>	It means to configure security settings for the wirelesss connection. SSID_NUMBER: Type 1, 2, 3 or 4 to specify SSID1, SSID2, SSID3 or SSID4. mode: Available settings are: disable: No security.

	wpa1x:	WPA/802.1x Only
	wpa21x:	WPA2/802.1x Only
	·	ed (WPA+WPA2/802.1x only)
	wep1x:	WEP/802.1x Only
	wpapsk:	WPA/PSK
	wpa2psk:	WPA2/PSK
	wpamixpsk:	Mixed (WPA+WPA2)/PSK
	wep:	WEP
	wpamixpsk and to be followed b	eover, you have to add keys for <i>wpapsk, wpa2psk,</i> wep, and specify index number of schedule profile by the wireless connection.
		pe in 5/13 ASCII text string or 10/26 Hexadecimal PA keys must be in 8-63 ASCII text string or 64 git format.
ratectl <ssid_num enable<="" td=""><td>It means to set</td><td>the rate control for the specified SSID.</td></ssid_num>	It means to set	the rate control for the specified SSID.
upload download>	ssid_num: Choos	se 1, 2, 3 or 4 to specify SSID1, SSID2, SSID3 or SSID4
		s to enable the function of the rate control for the control f

```

Telnet Command: wl set

This command allows users to configure basic wireless settings.

Syntax

wl set <SSID> <CHAN<En>> wl set txburst <enable>

Syntax Description

Parameter	Description
<ssid></ssid>	It means to Enter the SSID for the router. The maximum character that you can use is 32.
<chan<en></chan<en>	It means to specify required channel for the router. CHAN: The range for the number is between 1 ~ 13. En: type on to enable the function; type off to disable the function.
txburst <enable></enable>	It means to enhance the performance in data transmission about 40%* more (by enabling Tx Burst). It is active only when both sides of Access Point and Station (in wireless client) invoke this function at the same time. 0: disable the function. 1: enable the function.

```
> wl set MKT 2 on
% New Wlan Setting is:
% SSID=MKT
% Chan=2
% Wl is Enable
>
```

Telnet Command: wl act

This command allows users to activate wireless settings.

Syntax

wl act <En>

Syntax Description

Parameter	Description
<en></en>	It means to enable or disable the function of VPN isolation.
	0: diable
	1: enable

Example

```
> wl act on
% Set Wlan to Enable.
```

Telnet Command: wl stamgt

This command is used to configure connection time and reconnection time for each SSID that wireless client used for accessing into Internet.

Syntax

```
wl stamgt <enable/disable> <ssid_num>
wl stamgt show <ssid_num>
wl stamgt set <ssid_num> <c> <r>
wl stamgt reset <ssid_num>
```

Parameter	Description
<enable disable=""></enable>	It means to enable/disable the station management control.
<ssid_num></ssid_num>	It means channel selection.
	Available channel for 2.4G: 0/1/2/3
	Available channel for 5G: 4/5/6/7.
show	It means to display status or configuration of the selected channel.
С	It means connection time. The unit is minute.
r	It means reconnection time. The unit is minute.

```
> wl stamgt enable 1
% Station Management Status: enabled
> wl stamgt set 1 60 60
> wl stamgt show 1
NO. SSID BSSID Connect time Reconnect time
1. Draytek 00:11:22:aa:bb:cc 0d:0:58:26 0d:0:0
```

Telnet Command: wl iso_vpn

This command allows users to activate the function of VPN isolation.

Syntax

wl iso_vpn <ssid> <En>

Syntax Description

Parameter	Description
ssid	It means the number of SSID. 1: SSID1 2: SSID2 3: SSID3 4: SSID4
En	It means to enable or disable the function of VPN isolation. 0: disable 1: enable

Example

```
> wl iso_vpn 1 on
% ssid: 1 isolate vpn on :1
```

Telnet Command: wl wmm

This command allows users to set WMM for wireless connection. It defines the priority levels for four access categories derived from 802.1d (prioritization tabs).

Syntax

wl wmm ap Queldx Aifsn Cwmin Cwmax Txop ACM

wl wmm bss Queldx Aifsn Cwmin Cwmax Txop ACM

wl wmm ack Que0_Ack Que1_Ack Que2_Ack Que3_Ack

wl wmm enable SSID0 SSID1 SSID2 SSID3

wl wmm apsd value

wl wmm show

Parameter	Description
-----------	-------------

ар	It means to set WMM for access point.
bss	It means to set WMM for wireless clients.
ack	It means to map to the Ack policy settings of AP WMM.
enable	It means to enable the WMM for each SSID. 0: disable 1: enable
Apsd [value]	It means to enable / disable the ASPD(automatic power-save delivery) function. 0: disable 1: enable
show	It displays current status of WMM.
Queldx	It means the number of the queue which the WMM settings will be applied to. There are four queues, best effort, background, voice, and video.
Aifsn	It controls how long the client waits for each data transmission.
Cwmin/ Cwmax	CWMin means contention Window-Min and CWMax means contention Window-Max. Specify the value ranging from 1 to 15.
Тхор	It means transmission opportunity. Specify the value ranging from 0 to 65535.
ACM	It can restrict stations from using specific category class if it is enabled. 0: disable 1: enable

```
> wl wmm ap 0 3 4 6 0 0
QueIdx=0: APAifsn=3,APCwmin=4,APCwmax=6, APTxop=0,APACM=0
> wl wmm enable 1 0 1 0
WMM_SSID0 =1, WMM_SSID1 =0, WMM_SSID2 =1, WMM_SSID3 =0
> wl wmm show
Enable WMM: SSID0 =1, SSID1 =0,SSID2 =1,SSID3 =0
APSD=0
QueIdx=0: APAifsn=3,APCwmin=4,APCwmax=6, APTxop=0,APACM=0
QueIdx=1: APAifsn=7,APCwmin=4,APCwmax=10, APTxop=0,APACM=0
QueIdx=2: APAifsn=1,APCwmin=3,APCwmax=4, APTxop=94,APACM=0
QueIdx=3: APAifsn=1,APCwmin=2,APCwmax=3, APTxop=47,APACM=0
QueIdx=0: BSSAifsn=3,BSSCwmin=4,BSSCwmax=10, BSSTxop=0,BSSACM=0
QueIdx=1: BSSAifsn=7,BSSCwmin=4,BSSCwmax=10, BSSTxop=0,BSSACM=0
QueIdx=2: BSSAifsn=2,BSSCwmin=3,BSSCwmax=4, BSSTxop=94,BSSACM=0
QueIdx=3: BSSAifsn=2,BSSCwmin=2,BSSCwmax=3, BSSTxop=47,BSSACM=0
AckPolicy[0]=0: AckPolicy[1]=0,AckPolicy[2]=0,AckPolicy[3]=0
```

Telnet Command: wl ht

This command allows you to configure wireless settings.

Syntax

wl ht bw value

wl ht gi value

wl ht badecline value

wl ht autoba value

wl ht rdg value

wl ht msdu value

wl ht txpower value

wl ht antenna value

wl ht greenfield value

Syntax Description

Parameter	Description
wl ht bw value	The value you can type is 0 (for BW_20), 1 (for BW_20_40) and 2 (BW_40).
wl ht gi value	The value you can type is 0 (for GI_800) and 1 (for GI_400)
wl ht badecline value	The value you can type is 0 (for disabling) and 1 (for enabling).
wl ht autoba value	The value you can type is 0 (for disabling) and 1 (for enabling).
wl ht rdg value	The value you can type is 0 (for disabling) and 1 (for enabling).
wl ht msdu value	The value you can type is 0 (for disabling) and 1 (for enabling).
wl ht txpower value	The value you can type ranges from 1 - 6 (level).
wl ht antenna value	The value you can type ranges from 0-3. 0: 2T3R 1: 2T2R 2: 1T2R 3: 1T1R
wl ht greenfield value	The value you can type is 0 (for mixed mode) and 1 (for green field).

```
> wl ht bw value 1
BW=0
<Note> Please restart wireless after you set new parameters.
> wl restart
Wireless restart.....
```

Telnet Command: wl restart

This command allows you to restart wireless setting.

Example

```
> wl restart
Wireless restart.....
```

Telnet Command: wl wds

This command allows you to configure WDS settings.

Syntax

wl wds mode <value>
wl wds security <value>
wl wds ap <value>
wl wds hello <value>
wl wds status
wl wds show
wl wds mac <value>

Syntax Description

wl wds flush

Parameter	Description
mode <value></value>	It means to specify connection mode for WDS. [value]: Available settings are: d: Disable b: Bridge r: Repeapter
security <value></value>	It means to configure security mode with encrypted keys for WDS. mode: Available settings are: disable: No security. wep: WEP wpapsk [key]: WPA/PSK wpa2psk [key]: WPA2/PSK key: Moreover, you have to add keys for wpapsk, wpa2psk, and wep, and specify index number of schedule profiles to be followed by the wireless connection. WEP keys must be in 5/13 ASCII text string or 10/26 Hexadecimal digit format; WPA keys must be in 8-63 ASCII text string or 64 Hexadecimal digit format. e.g., w1 dual wds security disable w1 dual wds security wep 12345 w1 dual wds security wpa2psk 12345678
ap <value></value>	It means to enable or disable the AP function. Value: 1 - enable the function. 0 - disable the function.

hello <value></value>	It means to send hello message to remote end (peer). Value: 1 - enable the function. 0 - disable the function.
status	It means to display WDS link status for 2.4GHz connection.
show	It means to display current WDS settings.
mac add <ndex addr=""></ndex>	add [index addr] - Add the peer MAC entry in Repeater/Bridge WDS MAC table.
mac clear/disable/enable <index all=""></index>	clear/disable/enable <index all=""> - Clear, disable, enable the specifed or all MAC entries in Repeater/Bridge WDS MAC table. e.g, w1 dual wds mac enable 1</index>
flush	It means to reset all WDS setting.

```
> wl wds status
Please enable WDS hello function first.

> wl wds hello 1
% <Note> Please restart router after you set the parameters.

> wl wds status
```

Telnet Command: wl btnctl

This command allows you to enable or disable wireless button control.

Syntax

wl btnctl <value>

Syntax Description

Parameter	Description
<value></value>	0: disable
	1: enable

Example

```
> wl btnctl 1
Enable wireless botton control
Current wireless botton control is on
>
```

Telnet Command: wl iwpriv / wl efuse

This command is reserved for RD debug. Do not use them.

Telnet Command: wl stalist

This command is used to display the wireless station which accessing Internet via Vigor router.

Syntax

wl stalist

wl stalist num

wl stalist neighbor

wl stalist validtime <time>

wl stalist maxnum < num>

Syntax Description

Parameter	Description
num	Display the wireless station list.
neighbor	Diplay the number of the wireless stations.
valildtime <time></time>	Set the valid time (0 to 300000) of neighbor station list.
maxnum <num></num>	Set the maximum number (10 to 512) of neighbor station list.

Example

Telnet Command: wl bndstrg

This command allows users to configure settings for Band Steering (2.4GHz).

Syntax

wl bndstrg show

wl bndstrg enable <1/0>

wl bndstrg chk_time <value>

Parameter	Description
show	Display current status for Band Steering function.
enable <1/0>	It means to enable wireless 2.4GHz AP client mode.
	1 - enable
	0 - disable

chk_time <value></value>	If the wireless station does not have the capability of 5GHz network connection, the system shall wait and check for several seconds (15 seconds, in default) to make the 2.4GHz network connection. Specify the time limit for Vigor router to detect the wireless client.
	<value>- 1 to 60 seconds.</value>

```
> wl bndstrg show
band steering: disable
chk_time: 15 sec
> wl bndstrg chk_time 50 30
argv[0]:chk_time, argv[1]:50, argv[2]:30

%% Wireless card must be reset for configurations to take effect
%% (Telnet Command: wl restart)
```

Telnet Command: wl artfns

This command allows users to configure airtime fairness function for wireless (2.4GHz) connection.

Syntax

wl artfns enable <*value>* wl artfns trg_num <*value>* wl artfns show

Syntax Description

Parameter	Description
enable <value></value>	It means to enable wireless airtime fairness function. 1 - enable 0 - disable
trg_num <value></value>	Set a threshold when the active station number achieves this number, the airtime fairness function will be applied. Available values will be 2 to 64.
show	Display current status (enable or disable) and triggering client number for airtime fairness function.

Example

```
> wl artfns enable 1
> wl artfns trg_num 3
> wl artfns show
airtime fairness: enable
trg_num: 3
>
```

Telnet Command: wl drayrs

This command allows the user to configure settings for Roaming for wireless clients.

Syntax

```
wl drayrs set <mode><rs_low><rs_low_security><delta> wl drayrs restart wl drayrs show
```

Syntax Description

Parameter	Description
set <mode> <rs_low> <rs_low_security> <delta></delta></rs_low_security></rs_low></mode>	Select a mode for roaming. 0 - disable 1 - Strictly Minimum RSSI 2 - Minimum RSSI rs_low - Set a value of Strictly Minimum RSSI (62-86). rs_low_security - Set a value of Minimum RSSI (62-86). delta - Set a value of Adjacent AP RSSI (1-20).
restart	Restart to activate roaming function.
show	Dispaly current configuration of roaming function.

Example

```
> wl drayrs show
% Mode : Disable
% rs_low : -73
% rs_low_secure : -66
% delta : 5
>
```

Telnet Command: wl_dual acl

This command allows the user to configure wireless (5GHz) access control settings.

Syntax

wl_dual acl enable <ssid1 ssid2 ssid3 ssid4> wl_dual acl disable <ssid1 ssid2 ssid3 ssid4>

wl_dual acl add <MAC><ssid1 ssid2 ssid3 ssid4><isolate>

wl_dual acl del < MAC>

wl_dual acl mode <ssid1 ssid2 ssid3 ssid4> <white/black>

wl_dual acl show

wl_dual acl showmode

wl_dual acl clear

Parameter	Description
enable <ssid1 ssid2="" ssid3<br="">ssid4></ssid1>	It means to enable the settings for SSID1, SSID2, SSID3 and SSID4.
disable <ssid1 ssid2="" ssid3<br="">ssid4></ssid1>	It means to disable the settings for SSID1, SSID2, SSID3 and SSID4.
add <mac><ssid1 ssid2="" ssid3<br="">ssid4><isolate></isolate></ssid1></mac>	It means to associate a MAC address to certain SSID interfaces' access control settings. The isolate setting will limit the wireless

	client's network capabilities to accessing the wireless LAN only.
	[MAC] format: xx-xx-xx-xx-xx
	or xx:xx:xx:xx:xx
	or xx.xx.xx.xx
	isolate: It means to isolate the wireless connection of the wireless
	client (identified with the MAC address) from LAN.
del <mac></mac>	It means to delete a MAC address entry defined in the access control list.
	[MAC] format: xx-xx-xx-xx-xx
	or xx:xx:xx:xx:xx
	or xx.xx.xx.xx.xx
mode <ssid1 ssid2="" ssid3<br="">ssid4> <white black=""></white></ssid1>	It means to set white/black list for each SSID.
show	It means to display current status of access control.
showmode	It means to show the mode for each SSID.
clear	It means to clear all of the access control settings.

```
> wl_dual acl showmode
SSID1: None
SSID2: None
SSID3: None
SSID4: None
> wl_dual acl add 14-49-BC-0A-8A-B8 ssid1 ssid2 isolate
Set Done !!
> wl_dual acl show
-----Enable Mac Address Filter-----
SSID1: Disable SSID2: Disable SSID3: Disable SSID4: Disable
-----MAC Address Filter-----
Index Attribute MAC Address
                                Associated SSIDs
                 1
s: Isolate the station from LAN
```

Telnet Command: wl_dual apscan

This command is used to scan Access Point installed near the location of Vigor router.

Syntax

wl_dual apscan *start* wl_dual apscan *show*

Parameter	Description
start	It means to execute the AP scanning.
show	It means to display the content of the AP list.

```
> wl_dual apscan start
> wl_dual apscan show
AP scan is ongoing.
> wl_dual apscan ?
% wl_dual apscan [start/show]
% start: do AP scan
% show: show AP list

> wl_dual apscan show
5G Access Point List :
BSSID Channel SSID
```

Telnet Command: wl_dual config

This command allows users to configure general settings and security settings for wireless connection (5GHz).

wl_dual config enable <value>

wl dual config enable show

wl_dual config mode <value>

wl_dual config mode show

wl_dual config channel <number>

wl_dual config channel show

wl_dual config preamble <enable>

wl_dual config preamble show

wl_dual config ssid <ssid_num enable ssid_name>

wl_dual config ssid hide <ssid_num enable>

wl_dual config ssid show

wl_dual config ratectl <ssid_num enable upload download>

wl_dual config ratectl show

wl_dual config isolate lan <ssid_num enable>

wl_dual config isolate member <ssid_num enable>

wl_dual config isolate vpn <ssid_num enable>

wl_dual config isolate show

wl_dual config frag <value>

wl_dual config frag show

wl_dual config rts <value>

wl_dual config rts show

wl_dual config country <value>

wl_dual config txpower <value>

wl_dual config nss <value>

Parameter	Description
enable <value></value>	It means to enable/disable the 5GHz wireless function. 1: enable 0: disable
show	It means to display if 5G wireless function is enabled or not.
mode <value></value>	It means to select connection mode for wireless connection. Available settings are: "11a", "11n_5g", "11n" and "11an".
mode show	It means to display what the current wireless mode is.
channel <number></number>	It means the channel of frequency of the wireless LAN. The available settings are: 36, 40, 44, 48, 52, 56, 60, 64, 100, 104, 108, 112, 116, 120, 124, 128, 132, 136 and 140. number=0, means Auto number=36, means Channel 36

	Number=52, means Channel 52.
channel show	It means to display what the current channel is.
preamble <enable></enable>	It means to define the length of the sync field in an 802.11 packet. Most modern wireless network uses short preamble with 56 bit sync field instead of long preamble with 128 bit sync field. However, some original 11b wireless network devices only support long preamble. 0: disable to use long preamble. 1: enable to use long preamble.
preamble show	It means to display if preamble is enabled or not.
ssid <ssid_num enable<br="">ssid_name></ssid_num>	It means to set the name of the SSID, hide the SSID if required. <code>ssid_num:</code> Type 1, 2, 3 or 4 to specify SSID1, SSID2, SSID3 or SSID4. <code>ssid_name:</code> Give a name for the specified SSID.
ssid hide <ssid_num enable=""></ssid_num>	It means to hide the name of the SSID if required. ssid_num: Type 1, 2, 3 or 4 to specify SSID1, SSID2, SSID3 or SSID4. enable: Type 0 to hide the SSID or 1 to display the SSID.
ssid show	It means to display a table of SSID configuration.
ratectI <ssid_num enable<br="">upload download></ssid_num>	It means to set the rate control for the specified SSID. ssid_num: Choose 1, 2, 3 or 4 to specify SSID1, SSID2, SSID3 or SSID4. enable: It means to enable the function of the rate control for the specified SSID. 0: disable and 1:enable. upload: It means to configure the rate control for data upload. The unit is kbps. download: It means to configure the rate control for data download. The unit is kbps. (example: w1 dual config ratect1 1 1 25 25)
ratectI show	It means to display the data transmission rate (upload and download) for SSID1, SSID2, SSID3 and SSID4.
isolate lan <ssid_num enable></ssid_num 	It means to isolate the wireless connection from LAN. It can make the wireless clients (stations) with remote-dial and LAN to LAN users not accessing for each other. ssid_num: Choose 1, 2, 3 or 4 to specify SSID1, SSID2, SSID3 or SSID4. enable: It means to enable such function. 0: disable and 1:enable
isolate member <ssid_num enable></ssid_num 	It means to isolate the wireless connection from Member. It can make the wireless clients (stations) with the same SSID not accessing for each other. ssid_num: Choose 1, 2, 3 or 4 to specify SSID1, SSID2, SSID3 or SSID4. enable: It means to enable such function. 0: disable and 1:enable.
isolate vpn <ssid_num enable></ssid_num 	It means to isolate the wireless connection from VPN. ssid_num: Choose 1, 2, 3 or 4 to specify SSID1, SSID2, SSID3 or SSID4. enable: It means to enable such function. 0: disable and 1:enable.
isolate show	It means to display the status of wireless isolation.
frag <value></value>	It means to set the fragment threshold. value: Enter a number (256 to 2346).
frag show	It means to display current value of fragment threshold.
rts <value></value>	It means to set the RTS threshold. value: Enter a number (1 to 2347).

country <value></value>	It means to set the country code. Each country will be represented with two digits. value: Enter two capital letters (e.g., TW, UK, CN)
txpower <value></value>	It means to set TX power. Value: Enter a number (1 to 6).
nss <value></value>	It means to set NSS. Value: Enter a number (0 to 4).

```
> wl_dual config mode 11a
Current mode is 11a
% <Note> Please restart 5G wireless after you set the channel
> wl_dual config channel 60
Current channel is 60
% <Note> Please restart 5G wireless after you set the channel.
> wl_dual config preamble 1
Long preamble is enabled
% <Note> Please restart 5G wireless after you set the parameters.
> wl_dual config ssid 1 enable dray
SSID Enable Hide_SSID Name
                     dray
% <Note> Please restart 5G wireless after you set the parameters.
> wl_dual config ssid show
SSID Enable Hide_SSID Name
     1 0 dray
           0
                    DrayTek_5G_Guest
3
     0
           0
```

Telnet Command: wl_dual restart

This command allows you to restart wireless setting (5GHz).

Example

```
> wl_dual restart
5G wireless restart.....
```

Telnet Command: wl_dual security

This command allows users to configure security settings for the wireless connection (5GHz).

Syntax

wl_dual security <*SSID_NUMBER> <mode> <key> <index>* wl_dual security show

Parameter	Description
Security <ssid_number> <mode> <key> <index></index></key></mode></ssid_number>	SSID_NUMBER: Type 1, 2, 3 or 4 to specify SSID1, SSID2, SSID3 or SSID4.
	mode: Available settings are:

disable: No security. wpa1x: WPA/802.1x Only WPA2/802.1x Only wpa21x: wpamix1x: Mixed (WPA+WPA2/802.1x only) WEP/802.1x Only wep1x: wpapsk: WPA/PSK wpa2psk: WPA2/PSK wpamixpsk: Mixed (WPA+WPA2)/PSK WEP wep: key, index: Moreover, you have to add keys for wpapsk, wpa2psk, wpamixpsk and wep, and specify index number of schedule profiles to be followed by the wireless connection. WEP keys must be in 5/13 ASCII text string or 10/26 Hexadecimal digit format; WPA keys must be in 8-63 ASCII text string or 64 Hexadecimal digit format. show It means to display current mode selection for each SSID.

Example

```
> wl_dual security 1 wpa2psk 123456789e
% <Note> Please restart 5G wireless after you set the parameters.

> wl_dual security show
%% 5G Wireless LAN Security Settings:
% SSID1
%% Mode: WPA2/PSK
% SSID2
%% Mode: Disable
% SSID3
%% Mode: Disable
% SSID4
%% Mode: Disable
```

Telnet Command: wl_dual stalist

This command is used to display the wireless station which accessing Internet via Vigor router.

Syntax

wl_dual stalist
wl_dual stalist num
wl_dual stalist neighbor
wl_dual stalist validtime <time>
wl_dual stalist maxnum <num>

Parameter	Description
num	Display the wireless station list.
neighbor	Diplay the number of the wireless stations.
valildtime <time></time>	Set the valid time (0 to 300000) of neighbor station list.

maxnum <num></num>	Set the maximum number (10 to 512) of neighbor station list.
--------------------	--

Telnet Command: wl_dual wds

This command allows users to configure WDS for wireless connection (5GHz).

Syntax

```
wl_dual wds mode <value>
wl_dual wds security <value>
wl_dual wds ap <value>
wl_dual wds hello <value>
wl_dual wds status
wl_dual wds show
wl_dual wds mac add <index addr>
wl_dual wds mac clear/disable/enable <index/all>
wl_dual wds flush
```

Parameter	Description
mode <value></value>	It means to specify connection mode for WDS.
	[value]: Available settings are :
	d: Disable
	b: Bridge
	r: Repeapter
security <value></value>	It means to configure security mode with encrypted keys for WDS. <i>mode</i> : Available settings are:
	disable: No security.
	wep: WEP
	wpapsk [key]: WPA/PSK
	wpa2psk [key]: WPA2/PSK
	<i>key</i> : Moreover, you have to add keys for <i>wpapsk</i> , <i>wpa2psk</i> , and <i>wep</i> , and specify index number of schedule profiles to be followed by the wireless connection.
	WEP keys must be in 5/13 ASCII text string or 10/26 Hexadecimal

	digit format; WPA keys must be in 8-63 ASCII text string or 64 Hexadecimal digit format.
	e.g.,
	wl_dual wds security disable
	wl_dual wds security wep 12345
	wl_dual wds security wpa2psk 12345678
ap <value></value>	It means to enable or disable the AP function.
	Value: 1 - enable the function.
	0 - disable the function.
hello <value></value>	It means to send hello message to remote end (peer).
	Value: 1 - enable the function.
	0 - disable the function.
status	It means to display WDS link status for 5GHz connection.
show	It means to display current WDS settings.
mac add <index addr=""></index>	add <index addr=""> - Add the peer MAC entry in Repeater/Bridge WDS MAC table.</index>
mac clear/disable/enable <index all=""></index>	clear/disable/enable <index all="">- Clear, disable, enable the specifed or all MAC entries in Repeater/Bridge WDS MAC table. e.g,</index>
	wl_dual wds mac enable 1
flush	It means to reset all WDS setting.

```
> wl_dual wds status
Please enable WDS hello function first.

> wl_dual wds hello 1
% <Note> Please restart router after you set the parameters.
> wl_dual wds security wep
% Please configure WEP key set in Security Settings.
% <Note> Please restart router after you set the parameters.
> wl_dual wds show
Mode : Disable
Security : WEP
> wl_dual wds wep 12345
% <Note> Please restart router after you set the parameters.
```

Telnet Command: wl_dual wps

This command allows users to configure WPS for wireless connection (5GHz).

Syntax

wl_dual wps enable <value>
wl dual wps pbc
wl_dual wps pin <code>
wl_dual wps show

Parameter	Description
enable <value></value>	It means to enable WPS. 1 - enable
	i - enable

	0 - disable
pbc	It means to start WPS by pressing the WLAN ON/OFF WPS button on Vigor router.
pin <code></code>	It means to start WPS by using client PIN code. code: Client PIN code (digit number).
show	It means to display current WPS settings.

```
> wl_dual wps enable 1
WPS is enabled.
> wl_dual wps pin 88563337
WPS has triggered by PIN code.
The AP will wait for WPS request from your client for 2 minutes...
```

Telnet Command: wl_dual artfns

This command allows users to configure airtime fairness function for wireless (5GHz) connection.

Syntax

wl_dual artfns enable <value>
wl_dual artfns trg_num <value>
wl_dual artfns show
wl_dual artfns status

Syntax Description

Parameter	Description
enable <value></value>	It means to enable wireless airtime fairness function. 1 - enable 0 - disable
trg_num <value></value>	Set a threshold when the active station number achieves this number, the airtime fairness function will be applied. Available values will be 2 to 64.
show	Display current status (enable or disable) and triggering client number for airtime fairness function.
status	Display whether the function of airtime fairness is enabled or disabled.

```
> wl_dual artfns show
airtime fairness for 5G: disable
trg_num: 2
> wl_dual artfns status
airtime fairness for 5G is disabled !!!

> wl_dual artfns enable 0
> wl_dual artfns trg_num 2
> wl_dual artfns show
airtime fairness for 5G: disable
```

```
trg_num: 2
> wl_dual artfns status
airtime fairness for 5G is disabled !!!
```

Telnet Command: wl_dual drayrs

This command allows the user to configure settings for Roaming for wireless clients.

Syntax

```
wl_dual drayrs set <mode><rs_low><s_low_security><delta>
wl_dual drayrs restart
wl_dual drayrs show
```

Syntax Description

Parameter	Description
Set <mode> <rs_low> <s_low_security> <delta></delta></s_low_security></rs_low></mode>	Select a mode for roaming. 0 - disable 1 - Strictly Minimum RSSI 2 - Minimum RSSI rs_low - Set a value of Strictly Minimum RSSI (62-86). rs_low_security - Set a value of Minimum RSSI (62-86). delta - Set a value of Adjacent AP RSSI (1-20).
restart	Restart to activate roaming function.
show	Dispaly current configuration of roaming function.

Example

```
> wl_dual drayrs show
% Mode : Disable
% rs_low : -73
% rs_low_secure : -66
% delta : 5
> wl_dual drayrs set 1 68 66 2
> wl_dual drayrs show
% Mode : Strictly Minimun RSSI
% rs_low : -68
% rs_low_secure : -66
% delta : 2
```

Telnet Command: wol

This command allows Administrator to set the white list of WAN IP addresses/Subnets, that the magic packet from these IP addresses/Subnets will be eligible to pass through NAT and wake up the LAN client. You also need to set NAT rule for LAN client.

Syntax

```
wol up <MAC Address>
wol fromWan <on/off/any>
wol fromWan_Setting <idx><ip address><mask>
```

Parameter	Description

<mac address=""></mac>	It means the MAC address of the host.	
<on any="" off=""></on>	It means to enable or disable the function of WOL from WAN.	
	on: enable	
	off: disable	
	any: It means any source IP address can pass through NAT and wake up the LAN client.	
	This command will allow the user to choose whether WoL packets can be passed from the Internet to the LAN network from a specific WAN interface.	
<idx><ip address=""><mask></mask></ip></idx>	It means the index number (from 1 to 4).	
	These commands will allow the user to configure the LAN clients that the user may wake up from the Internet through the use of the WoL packet.	
	ip address - It means the WAN IP address.	
	mask - It means the mask of the IP address.	

```
> wol fromWan on

% wol fromWan: on

> wol fromWan_Setting 1 192.168.1.45 255.255.255.0

% wol fromWan_Setting 1 192.168.1.45 255.255.255.0

>
```

Telnet Command: user

The command is used to create new user account profiles.

Syntax

user set <-a/-b/-c/-d/-e/-l/-o/-q/-r/-s/-u>user edit $<PROFILE_IDX>$ <-a/-d/-e/-f/-i/-o/-m/-n/-p/-q/-r/-s/-t/-u/-v/-w/-x/-A/-H/-T/-P/-l/-L/-D>user account $<USER_NAME><-t/-d/-q/-r/-w>$ user setdefault

Parameter	Description
set	It means to configure general setup for the user management.
edit	It means to modify the selected user profile.
account	It means to set time and data quota for specified user account.
User Set	•
-a <profile idx=""> <user name><ip_address></ip_address></user </profile>	It means to pass an IP Address. Profile idx- type the index number of the selected profile. User name- type the user name that you want it to pass. IP_Address- type the IP address that you want it to pass.
-b <user name=""> -b ip <ip address=""></ip></user>	Block specifies user or IP address. user name - type the user name that you want to block. ip address type the IP address that you want to block.
-c <user name=""> -c all</user>	Clear the user record. user name - type the user name that you want to get clear corresponding record. all - all of the records will be removed.
-d	Enable the User management in Rule-Based mode.
- <i>е</i>	Enable the User management in User-Based mode.
-l all -l user -l ip	Show online user. all - all of the users will be displayed on the screen. user name - type the user name that you want to view on the screen.
-0	ip - type the IP address that you want to view on the screen.It means to show user account information.e.g., -o
-q	It means to trigger the alert tool to do authentication.
-r <user all="" name="" =""></user>	Remove the user record. user name - type the name of the user profile. all - all of the user profile settings will be removed.
-s <0/1>	It means to set login service. 0:HTTPS 1:HTTP e.g.,-s 1
-u user <user name=""> -u ip <ip address=""></ip></user>	Unblock specifies user or IP address. user name - type the user name that you want to unblock. ip address type the IP address that you want to unblock.

User edit		
PROFILE_IDX	Type the index number of the profile that you want to edit.	
-a <0/1>	Enable(1) or disable(0) the internal RADIUS.	
-d	Disable User profile function.	
- <i>е</i>	Enable User profile function.	
-f <0/1>	Enable(1) or disable(0) the local 802.1x user.	
-i <0-255>	It means to set idle time (from 0 to 255, 0 means unlimited). e.g., -i 60	
-0 <0-65535>	It means to set auto-logout (from 0 to 65535, 0 means unlimited).	
-m <0-2000>	It means to set the maximum (from 0 to 2000) login user number. e.g., -m 200	
-n <param/>	It means to set a user name for a profile. Param: Enter a string, e.g.,-n fortest.	
-p <param/>	It means to configure user password. Param: Enter a string, e.g., -p 60fortest.	
-q <param/>	It means to set time quota (0-65535) of the user profile. Param: Enter a value, e.g., -q 200.	
-r <param/>	It means to set data quota. Param: Enter a value, e.g., -r 1000.	
-s <sch_idx1,sch_idx2,sch_idx3 , and sch_idx4></sch_idx1,sch_idx2,sch_idx3 	It means to set schedule index. Available settings are" sch_idx1,sch_idx2,sch_idx3, and sch_idx4.	
-t <0/1>	It means to enable /disable time quota limitation for user profile 0:Disable 1:Enable	
-u <0/1>	It means to enable /disable data quota limitation for user profile 0:Disable 1:Enable	
- <i>V</i>	It means to view user profile(s).	
-w <mb gb=""></mb>	It means to specify the data quota unit (MB/GB). e.g., -w MB	
-x <0-3>	It means to set external server authentication 0: None 1: LDAP 2: Radius 3: TACAS e.g., -x 2	
-1 <0-3>	It means to set log type. 0:None 1:Login 2:Event 3:All	
-P <0/1>	It means to enable /disable pop browser tracking window for user profile 0:Disable 1:Enable	
-T <0/1>	It means to enable /disable authentication by telnet.	

	0:Disable
	1:Enable
-H <0/1>	It means to enable /disable authentication by web page.
	0:Disable
	1:Enable
-A <0/1>	It means to enable /disable authentication by alert tool.
	0:Disable
	1:Enable
-L <index></index>	It means to set active directory / LDAP profiles.
	Index: Specify the index number (profile_idx1 to profile_idx8) of the profile.
-D	It means to list all active directory / LDAP profiles.
-0 <0/1>	It means to reset the quota automatically.
	0:Disable
	1:Enable
-Q <param/>	It means to set the default time quota.
	param: Enter a number (1 to 65535).
-R <param/>	It means to set the default data quota.
	param: Enter a number (1 to 65535).
-M <param/>	It means to set the default quota type.
	0: when login permission schedule expired.
	1: at the start time of schedule.
I <param/>	It means to specify the default quota schedule index to perform the job at the start time.
<i>-S</i>	It means to display the reset default quota type and the schedule index.
User account	
USER_NAME	It means to type a name of the user account.
-d<0/1>	It means to enable /disable data quota limitation for user account.
	0:Disable
	1:Enable
-q	It means to set account time quota.
	e.g., - <i>q 200</i>
-r	It means to set account data quota.
	e.g., <i>-r 1000</i>
-t <0/1>	It means to enable /disable time quota limitation for user account.
	0:Disable
	1:Enable
-W	It means to set data quota unit (MB/GB).

```
> user account admin -d 1

Enable the [admin] data quota limited
```

Telnet Command: appqos

The command is used to configure QoS for APP.

Syntax

appqos view
appqos enable <0/1>
appqos traceable <-v / -e AP_INDEX CLASS / -d AP_INDEX>
appqos untraceable <[-v / -e AP_INDEX CLASS / -d AP_INDEX>

Syntax Description

Parameter	Description	
view	It means to display current status of APP QoS.	
enable < 0/1>	It means to enable or disable the function of APP QoS.	
traceable/ untraceable	The APPs are divided into traceable and untraceable based on their properties.	
- <i>V</i>	It means to view the content of all traceable APs. Use "appgos traceable -v" to display all of the traceable APS with	
	speficed index number.	
	Use "appqos untraceable -v" to display all of the untraceable APS with speficed index number.	
-е	It menas to enable QoS for application(s) and assign QoS class.	
AP_INDEX	Each index number represents one application.	
	Index number: 50, 51, 52, 53, 54, 58, 60, 62, 63, 64, 65, 66, 68 are used for 13 traceabel APPs.	
	Index number: 0~49, 55~59, 61, 67, 69, and 70~123 are used for 125 untraceable AP.	
CLASS	Specifies the QoS class of the application, from 1 to 4	
	1:Class 1, 2:Class 2, 3:Class 3, 4:Other Class	
-d	It means to disable QoS for application(s).	

```
> appqos enable 1
APP QoS set to Enable.
> appqos traceable -e 68 2
TELNET: ENABLED, QoS Class 2.
```

Telnet Command: nand bad /nand usage

"NAND usage" is used to display NAND Flash usage; "nand bad" is used to display NAND Flash bad blocks.

Syntax

nand bad

nand usage

Example

>nand usage						
Show NA	and Flash Usag	e:				
Partitio	on Total	Used	Available	Usecfg	419	
4304	16768	4177536	0bin_web	33554432	181	
20754	15433678	54cfg-bak	4194304	16768	417	
7536	0bin_web-1	oak 33554432	18120754	15433678	54	
> nand	> nand bad					
Show NA	AND Flash Bad	Blocks:				
Block	Address	Partition				
1020	0x07f80000	unused				
1021	0x07fa0000	unused				
1022	0x07fc0000	unused				
1023	0x07fe0000	unused				

Telnet Command: apm enable/disable/show /clear/discover/query

The apm command(s) is use to display, remove, discover or query the information of VigorAP registered to Vigor2135.

Syntax

apm enable

apm disable

apm show

apm clear

apm discover

apm query

Parameter	Description
enable	It means to enable APM function.
disable	It means to disable APM function.
clear	It is used to remove all of the APM profile.
discover	It is used to search VigorAP on LAN.
query	It is used to query any VigorAP which has been registered to APM (Central AP Management) in Vigor2135. Information related to the registered AP will be send back to Vigor2135 for updating the web page of Central AP Management.

```
> apm clear ?
Clear all clients ... done
```

Telnet Command: apm profile

This command allows to configure wireless profiles to be used in Central AP Management.

Syntax

```
apm profile clone <from index> <to index> <new name>
apm profile del <index>
apm profile reset
apm profile summary
apm profile show <profile index>
apm profile apply <profile index> <cli>client index2 .. index5>>>
```

Syntax Description

Parameter	Description
clone	It is used to copy the same parameters settings from one profile to another APM profile.
del	It is used to delete a specified APM profile. The default (index #1) should not be deleted.
reset	It is used to reset to factory settings for WLAN profile.
summary	It is used to list all of the APM profiles with required information.
show	It is used to display specified APM profile.
apply	It is used to apply the selected APM profile onto specified VigorAP.
<from index=""></from>	Type an index number in this field. It is the original APM profile to be cloned to other APM profile.
<to index=""></to>	Type an index number in this file. It is the target profile which will clone the parameters settings from an existed APM profile.
<new name=""></new>	Type a name for a new APM profile.
<pre><pre><pre><pre><pre><pre></pre></pre></pre></pre></pre></pre>	Enter the index number of existed profile.
client index1/2/3/4/5	It is useful for applying the selected APM profile to the specified VigorAP.

Telnet Command: apm cache

This command is used to display or remove the information of registered VigorAP, including MAC address, name, and authentication. Up to 30 entries of registered information can be stored and displayed.

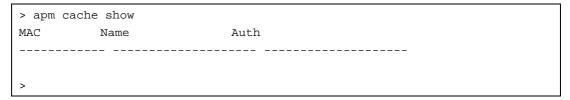

Syntax

apm cache <show>
apm cache clear

Syntax Description

Parameter	Description
show	It means to display the information related to VigorAP registered Vigor2135.
clear	It means to remove the information related to VigorAP registered Vigor2135.

Example

Telnet Command: apm lbcfg

This command allows to set parameters related to AP management control.

Syntax

apm lbcfg <set> <value>
apm lbcfg <show>

Parameter	Description
<set></set>	It means to set the load balance configuration file for APM.
show	It shows the configuration value.
<value></value>	You need to type 10 numbers in this field. Each number represents different setting value.
	[1] - The first number means the load balance function. Type
	1 - enable load balance,
	0 - disable load balance.
	[2] - The second number means the station limit function. Type
	1 -enable station limit,
	0 - disable station limit.
	[3] - The third number means the traffic limit function. Type
	1 - enable traffic limit,

- 0 disable traffic limit.
- [4] The forth number means the limit num of station. Available range is 3-64.
- [5] The fifth number means the upload limit function. Type
- 1 enable upload limit,
- 0 disable upload limit.
- [6] The sixth number means the download limit function. Type
- 1 enable download limit,
- 0 disable download limit.
- [7] The seventh number means disassociation by idle time. Type
- 1 enable disassociation,
- 0 disable disassociation.
- [8] The eighth number means to enable or disable disassociation by signal strength. Type
- 1 enable disassociation,
- 0 disable disassociation.
- [9] The ninth number means to determine the unit of traffic limit (for upload)
 - 1 Mbps
 - 0 kbps
- [10] The tenth number means to determine the unit of traffic limit (for download)
 - 1 Mbps
 - 0 kbps
- [11] The 11th number means to set the RSSI threshold (from -200 to -50 dbm).

```
> apm lbcfg show
apm LoadBalance Config :
1. Enable LoadBalance: 0
2. Enable station limit: 0
3. Enable traffic limit: 0
4. limit Number: 64
5. Upload limit: 0
6. Download limit : 0
7. Enable disassociation by idle time : 0
8. Enable disassociation by Signal strength: 0
9. Traffic limit unit (upload)
10.Traffic limit unit (download) : 0
flag: 0
> apm lbcfg set 1 1 0 15 0 0 0 0 1 1
> apm lbcfg show
apm LoadBalance Config :
1. Enable LoadBalance : 1
2. Enable station limit: 1
3. Enable traffic limit: 0
4. limit Number: 15
5. Upload limit: 0
6. Download limit : 0
7. Enable disassociation by idle time : 0
8. Enable disassociation by Signal strength : 0
```

```
9. Traffic limit unit (upload) : 1
10.Traffic limit unit (download) : 1
flag : 49
```

Telnet Command: fw_backupmode

This command is used to backup the firmware to the router. The firmware will be retrieved for rebooting Vigor router after it crashes over three times.

Syntax

backupmode [<command><parameter>|...]

Syntax Description

Parameter	Description
[<command/> <parameter>]</parameter>	The available commands with parameters are listed below. [] means that you can Enter several commands in one line.
-t n	Set the backup time. n: 1 - 168 hours
-m n	Set the firmware backup mode. n= 0 or 1. 1: Backup after timeout. 0: Backup after upgrade.
-b	Backup the firmware manually and immediately.
-r n	Set the firmware recovery mode. n= 0 or 1. 1: the firemware will be recovered when the system crash. 0: No recovery.

Example

```
> fw_backupmode -b

Do Firmware backup now!!!.
```

Telnet Command: service

This command is used to display information about Myvigor service. In addition, it allows to transfer MyVigor service from the original account to other account.

Syntax

```
service -s
service -r
service -l <account><password>
service -i <new_owner><new_owner_email>
service -t <yes>/<no>
service -c
```

Parameter	Description
-S	Display the service status.

-r	Refresh the service status
-I <account><password></password></account>	Login to MyVigor server. Enter the account and password registered to MyVigor server account - Enter the name of the account. Password - Enter the password of the account.
-i <new_owner> <new_owner_email></new_owner_email></new_owner>	Enter the name and the e-mail address of the new owner for service transfer. New_owner - Enter the account name of the new owner. New_owner_email - Enter the e-mail address of the new owner.
-t <yes>/<no></no></yes>	Transfer this Vigor device to a new owner.
-C	Clear current owner's account information.

```
> service
> service -l carrieni ttt0016ttt5
Login Account:carrieni, Pw:ttt0016ttt5
Login Success! Please check Service Status again!
> service -s
Show service status.
Now state is [SS_STATE_REG_ACC_VALID]
Service Status:
Model Name : Vigor2135 Series
Serial Number: 2019053108580701
MAC Address : 00:1D:AA:73:4A:78
Owner Account: carrieni
E-mail : ca****i@draytek.com
Device service support status:

```

Telnet Command: dmn

This command is used to set configuration related to mesh network, status display or trigger the mesh actions.

Syntax

```
dmn enable <1/0>
dmn reset_group
dmn loglevel <1/0>
```

dmn search <start/show>
dmn status
dmn mynode
dmn discover <start/show>
dmn acs
dmn table <0/1/2>
dmn set <rssi [1~100]/ timeout>
dmn disconnect
dmn auto_reselect
dmn reselect

Parameter	Description
enable <1/0>	Enable or disable the mesh function.
	1 - Enable.
	0 - Disable.
reset_group	Reset the group list and group key.
loglevel <1/0>	Set the mesh log level.
	1 - detailed information.
	0 - basic information.
search start search show	Search for available mesh nodes in the environment to join the Mesh Network.
	start - Begin to search.
	show - Display the searching result.
status	Display the group status.
mynode	Display the local status of this device. For example,
	DrayTek> dmn mynode
	% [dmn_cmd] my node:
	Preferred Wireless Uplink : Auto
	Operation Mode: MeshNode(Wired)
	Root MAC: 00:00:00:00:00
	Hop: 0
	Uplink : none
	Downlink (0):
	Model : Vigor2135
	Device Name : DrayTek
	MAC : 00:1D:AA:70:33:E0
	State : Mesh Node (Wired Uplink) - Isolate
	Status : New
discover start discover show	Search for mesh devices (including mesh root and mesh node) around this router.
	start - Begin to search.
	show - Dispaly the searching result.
acs	Obtain information by sending requests to Mesh auto-configuration server.
	Available sub-commands include:
	(g)et - get mynode and station list
	(s)et - set all parameter
	prin(t) - print all list
	(c)lear - clear all method
	(p)ause - pause acs
	(r)esume - resume acs

	st(a)tus - acs group status
	sta(l)ist - print all node station list
	(u)p_sta_status - print update station list status
	r(e)set - reset dmn acs
table <0/1/2>	Display a device table of the mesh network.
	0 - Originator table
	1 - Local client table
	2 - Remote client table
set rssi <value></value>	When the RSSI value of the mesh node is less than the threshold, the
set timeout	network connection of the mesh node will be not allowed. Or, a
set show	mesh node will be disconnected if exceeding the timeout.
3Et 3110W	rssi <value> - Set the threshold (1 to 100) value of the RSSI.</value>
	timeout - Set the timeout level (unit is "second").
	Show - Display current threshold (%) and timeout.
disconnect <mac></mac>	Disconnect an online wireless mesh node. In general, the mesh node will reconnect to Mesh Network later.
	<pre><mac> - Enter the MAC address of the mesh node in a Mesh Group. (Ex. dmn disconnect 00:1d:aa:22:33:44)</mac></pre>
auto_reselect	Enable (1) or disable (0) the auto reselection function. If enabled, the Mesh Root starts a Mesh Reselect automatically after the Mesh Network changed.
reselect	Start a Mesh Reselect immediately. An online Wireless Mesh Node may reconnect to a better Wireless uplink.

```
> dmn
> dmn auto_reselect 1
% Enable Auto Reselect
> dmn set show
% RSSI threshold : 30 (%)
% Timeout duration : 60 secconds
% [2] 00:50:7F:F1:91:BC rssi level: 30 (%)
```
